Rest of U.S.			871	3	5,837	6	5,928	8	27,860	12	40,496	8
Foreign			150	1	2,673	2	2,497	2	2,000	1	6,320	1
Total	53,854	100	27,151	100	122,802	100	71,500	100	226,668	100	502,475	100

(259) Tables 1, 2 and 3, above, prove that in each of the size categories shown (under $50,000, $50,000-$99,999, $100,000-$499,999, $500,000-$999,999, and over $1,000,000), the primary geographic source of commercial and industrial loan business of each bank and of the combined banks is the four-county area. The four-county area in which the defendants operate branches is the source of from 55 to 75% of each bank's loans in all but one of the size categories (45% of PNB's over $1,000,000 loans originate in the four-county area), and the four-county area is the source of 57% of the combined banks' total dollar volume of all commercial and industrial loans.

(260) Government Exhibit 24 (Revised) shows that the four-county area accounts for about 66% of the total number of the combined banks' commercial and industrial loans over $50,000 and about 55 percent of the total dollar volume of the combined banks' commercial and industrial loans over $50,000.

Total	111,664	100	87,375	100	198,469	100

261) Tables 4, 5 and 6, above, prove that the primary geographic source of installment loans to individuals for each bank and for the combined banks is the four-county area. The four-county area in which the defendants operate branches is the source of 54% of Girard's installment loans to individuals, 75% of PNB's and 65% of the combined banks' total.

(262) (This number not used.)

c. Loans to individuals, single payment

(263) Tables 4, 5 and 6, above, prove that the primary source of single payment loans to individuals for each bank is the four-county area. This area accounts for 83% of Girard's single payment loans to individuals, 76% of PNB's, and 81% of the combined banks' total.

d. Real estate loans

TABLE 7
(based on Ex. D-64)

REAL ESTATE LOANS BY LOCATION OF BORROWER, SEPTEMBER 21, 1960

[add 000 to $ figures]

Size of loan	4-county total	All other areas	Percent in 4-county area
	PNB		
Under $50,000	$29,793	$5,258	85
$50,000 and over	17,742	11,426	61
Total	47,535	16,684	74
	Girard		
Under $50,000	$17,374	$537	97
$50,000 and over	11,126	4,806	70
Total	28,500	5,343	84
	Combined		
Under $50,000	$47,167	$5,795	89
$50,000 and over	28,868	16,232	64
Total	76,035	22,027	78

(264) The statistics in Table 7, taken from Defendants' Exhibit D-64, prove that the primary geographic source of real estate loans of each bank and of the combined banks is the four-county area. The four-county area is the source of 74% of all of PNB's real estate loans, 84% of all Girard's and 78% of the combined banks' total real estate loans. The concentration of each bank's real estate business in the four-county area is even more pronounced in the category of such loans under $50,000.

2. Lines of credit, September 1960

(265) Defendant PNB had 50 lines of credit under $50,000. Approximately 27 of such lines, equal to about 54%, were to customers in the four-county area. Ex. G-21(8)

(266) Defendant Girard had 186 lines of credit under $50,000. Approximately 170 of such lines, equal to about 92%, were to customers in the four-county area. Galley, Tr. 173; Ex. G-20(8)

TABLE 8

LINES OF CREDIT $50,000 OR MORE

(based on Ex. G-17(8) and G-18(8)

[add 000 to $ figures]

	Four-County Area	Other Pennsylvania	All Other Areas	Total
	PNB			
Number of lines	273	98	297	648
Dollar volume	$343,718	$14,538	$425,982	$721,238
Percent of total:				
Number of lines	58.3	10.3	31.3	99.9
Dollar volume	47.7	2.1	45.2	100.0
	Girard			
Number of lines	435	96	215	746
Dollar volume	$278,139	$34,046	$155,500	$467,685
Percent of total:				
Number of lines	60.6	9.3	30.1	100.0
Dollar volume	58.5	9.3	32.2	100.0

TABLE 9

ALL LINES OF CREDIT

(based on Ex. P-68)

[add 000 to $ figures]

	Four-County Area	Outside four-county area	Percent in four-county area
PNB	$[illegible]	$[illegible]	41
Girard	[illegible]	[illegible]	62
Combined	[illegible]	[illegible]	49

(267) Tables 8 and 9 show that a substantial portion of both banks' lines of credit originates in the four-county area. For lines of credit $50,000 or more, 58.3% of the number of PNB's lines of credit and 60.6% of Girard's are to customers in the four counties.

3. Personal trusts

TABLE 10

(based on Ex. D-69, III)

GEOGRAPHICAL SOURCE OF PERSONAL TRUST BUSINESS BY NUMBER OF ACCOUNTS

Type of Trust Account	Four-county total	All other areas total	Percent in four-county area
	Girard		
Exec'r & Adm'r	254	62	80.3
Tr. under deed	1,552	1,217	56.0
Tr under will	2,270	478	82.7
Guardian	235	15	94.0
Active Life Ins	236	82	74.2
Cemetery Trust	478	9	98.1
Inactive Life Ins	1,252	429	74.4
Investm. Advisory	296	181	62.1
Custodian Acct	386	224	63.3
Pension & Prof Sh	320	97	76.7
Total	7,279	2,789	72.3
	PNB		
Exec'r & Adm'r	119	8	93.7
Tr. under deed	487	35	93.3
Tr. under will	479	3	99.4
Guardian	307	7	97.8
Cemetery Trust	196	0	100.0
Investment Mg'mt	61	8	88.4
Custod'an	102	64	61.4
Pension & Prof. Sh	74	29	71.8
Consultation	1	1	50.0
Misc.	807	1	99.8
Total	2,433	156	94.0

(268) Thus the primary geographic source of personal trust business of each of the defendant banks is the four-county area. The four-county area is the source for over 72% of Girard's personal trust business and 94% of PNB's.

4. Time and savings deposits

TABLE 11

(276) Tables 15, 16, and 17, above, show that the primary geographic source of demand deposits of partnerships and corporations in various size categories for each bank and the combined banks is the four-county area.

(277) Thus, Table 15 shows that from 99% to 58% of PNB's business demand deposits in various size categories originate in the four-county area and that, overall, 66 per cent of PNB's total business demand deposits originate in the four-county area.

(278) Table 16 shows that from 90% to 71% of Girard's business demand deposits in various size categories originate in the four-county area and that, overall, 78% of

Girard's total business demand deposits originate in the four-county area.

(279) Table 17 shows that 94% of the combined banks' business demand deposits under $10,000 and 68% of the combined banks' business demand deposits $10,000 and over originate in the four-county area. Overall, 71% of the combined banks' total business demand deposits originate in the four-county area.

(280) In summary, total individual, partnership, and corporation time and demand deposits of each bank and of the combined banks are primarily derived from the four-county area, as shown in the following from Ex. D–30:

Total IPC time and demand deposits	Inside four-county area		Outside four-county area	
	Million dollars	Percent	Million dollars	Percent
PNB	441.9	73.9	155.6	26.1
Girard	441.4	84.7	79.8	15.3
Combined	883.3	78.9	235.4	21.1

(281) (This number not used.)

7. All time and demand deposits

(282) Tables 11 and 12 show that the four-county area is the primary source of all time and demand deposits of each de-

fendant and of the combined banks, as follows:

All time and demand deposits	Inside four-county area		Outside four-county area	
	Million dollars	Percent	Million dollars	Percent
PNB	535.7	59.3	367.0	40.7
Girard	524.9	80.5	126.9	19.5
Combined	1,060.6	68.2	493.9	31.8

(283) The data in defendants' exhibits introduced into evidence, the data supplied by defendants in the Federal Reserve Board loan surveys of 1955 and 1957 (Exhibits G–9B, G–9C, G–9D, and G–9E), and the data furnished to the Government in response to questions propounded in connection with this case, reveal that an overwhelming proportion of the total banking business of defendants is done in the four-county area.

Brown, Tr. 3815–17
Carter, Tr. 3249–51
Mason, Tr. 3048
Harris, Tr. 2307

(284) It is evident that customers in the four-county area do business with banks which maintain offices in the area to a much greater extent than customers in any other area. This fact taken in conjunction with testimony of defendants' witnesses that the geographic area served by a commercial bank is primarily the area in which the bank has offices, warrants a conclusion that the four-county area is an appropriate market in which the impact of the proposed merger on competition may be tested.

(285) PNB traditionally has been a wholesale bank and it does proportionately more business outside the four-county area than other Philadelphia banks. Thus, the heavy concentration of PNB's business within the four-county area leads reasonably to the conclusion that the other smaller Philadelphia area banks have no lesser shares of their business within the area than PNB.

Ex. G-161
Ex. G-57 p. 9
Brown, Tr. 3813
Potts, Tr. 1349

VI. COMPETITION WHICH WOULD BE ELIMINATED BY THE MERGER

A. General

(286) At present there is substantial direct competition between the head offices of PNB and Girard and this competition will be eliminated if the merger is approved.

Harris, Tr. 2391

(287) Girard is an active and alert competitor of PNB throughout the area in which PNB has banking offices.

Potts, Tr. 1358–1359
Brown, Tr. 2822

(288) Competition between commercial banks in Philadelphia is "fierce" at the present time and will, if the proposed merger is consummated, be "even more vicious."

McDowell, Tr. 2938–2939

(289) PNB competes in a variety of ways and on a regular basis to take customers away from Girard, as well as all the other banks in the Philadelphia area, utilizing calls and entertainment, the selling of new services and the bank's stature

McDowell, Tr. 2940–2942

or lending limit, and every other competitive advantage available; and as PNB increases its services, it increases its ability to attract these customers and its officers expect to obtain more of these customers as a result.

Brown, Tr. 3811–3812, Ex. G–46

(290) At the time of the application to merge, November 15, 1960, PNB and Girard had the following mutual or common account customers who had deposit balances of $10,000 or more with the two banks or loan accounts of $50,000 or more with the two banks.

Type of account	Number of mutual accounts	Balance	
Checking accounts	302	PNB	$163,820,700
		Girard	$101,782,700
Time accounts	8	PNB	$1,149,400
		Girard	$3,004,000
Savings accounts	36	PNB	$736,400
		Girard	$589,800
Loans	67	PNB	$48,949,000
		Girard	$43,309,000

Worstall, Tr. 1063

(291) The two principal Philadelphia competitors of PNB are Girard and First Pennsylvania Banking & Trust Co.

Brown, Tr. 2821–2822 Ex. D–38

(292) PNB is an active competitor of Girard in the banking services which both banks render.

B. Branches

Beadle, Tr. 876, 882 Sienkiewicz, Tr. 2066

(293) The Philadelphia banks compete to acquire banks in the three contiguous counties. The Philadelphia banks compete to acquire desirable branch sites.

(294) In order to maintain its competitive position Girard believes it must keep a strategic branch system. Beadle, Tr. 884

(295) An important factor to PNB in viewing its relative position in the 69th Street area was the merger of Upper Darby National Bank into Girard. PNB stated: Worstall, Tr. 1068; Ex. G–88, p. 16

> This merger will undoubtedly reduce our competitive ability in the area in that it will add a second bank in the area capable of offering its depositors the convenience of both downtown offices and local offices.

(296) At the time PNB decided to locate a branch at 69th Street a particularly important factor in its decision was the need to have a convenient location to protect and retain existing business. Worstall, Tr. 1067

(297) The 69th Street branch of PNB is located next door to a branch of Girard, another Girard branch is 2.9 miles away, and a third Girard branch is 3.8 miles away. The present PNB office at this address will be closed if this merger is approved. Worstall, Tr. 1060; Ex. G–88, p. 2; Brown, Tr. 2589

(298) At the time PNB applied for the 69th Street branch, it considered its two principal Philadelphia competitors to be The First Pennsylvania Banking and Trust Company and Girard. Worstall, Tr. 1062; Ex. G–88, p. 12e

Worstall, Tr. 1073–1076 Ex. G–89, p. 6 and Ex. B

(299) One of the reasons PNB established the Roosevelt Boulevard office was to serve more efficiently and conveniently the customers it had in the area.

Worstall, Tr. 1072 Ex. G–89, p. 2

(300) Three branches of Girard are within three miles of the Roosevelt Boulevard office of PNB, at distances of 1.6, 2.1, and 2.9 miles respectively.

Worstall, Tr. 1074–75 Ex. G–89, p. 2

(301) PNB's nearest branches to the Roosevelt Boulevard office are 5.5 miles and 4.5 miles away.

Beller, Tr. 3130–3134

(302) In addition to the Girard, which eventually did acquire the Ambler National Bank, the Broad Street Trust Co. and PNB also wanted to acquire the Ambler Bank, and representatives of those banks discussed acquiring the bank with directors of the Ambler National Bank.

Gardner, Tr. 2218

(303) The Suburban Station office of Girard is just one mile from PNB office at 3131 Market Street.

Gardner, Tr. 2219

(304) The Girard has an office 1.25 miles from the Front Street Office of PNB.

Gardner, Tr. 2219

(305) The Erie and Castor Avenue Office of PNB is just one mile from the nearest branch of Girard.

Gardner, Tr. 2220

(306) The Front and Allegheny Office of PNB is only .875 of a mile from the Germantown and Lehigh Office of Girard.

Ridgway, Tr. 1180 Ex. G–111

(307) The Ardmore Office of PNB is proximate to several offices of Girard and

some customers of the Girard reside in the area of the Ardmore office.

(308) Competition between the branches of the PNB and Girard is substantial, as shown by the following: Ex. D-12 Ex. D-12A Ex. D-13 Ex. D-13A Ex. G-57, pp. 45-46, 59-60, 63-64

CITY OFFICES WITHIN 1 MILE OF EACH OTHER

Total	348,138	123,400		352,608	286,213

[1] Includes office at 4700 Frankford Avenue.

(309) There is a substantial amount of competition between most of the offices of PNB within Philadelphia and one or more of the offices of Girard. Harris, Tr. 2401

(310) All eleven of the offices of Girard in the City of Philadelphia as shown on Exhibit D-12 are in competition with one or more offices of PNB. Harris, Tr. 2391

(311) All of the branches of PNB and Girard located in Delaware County are at Harris, Tr. 2396

least potential competitors of a branch of the other bank.

Harris, Tr. 2398–99

(312) In Montgomery County, the branch of PNB at 75 St. James Place, Ardmore, is in actual direct competition with the Wynnewood branch of Girard. All other branches of the two defendants in this county are at least potential competitors of a branch of the other bank.

Ex. G–182

(313) Commercial customers with accounts in the following offices of PNB as of November 22, 1960, also had accounts with Girard:

Office of Philadelphia National	*Number of accounts*
Bucks County	6
Chester-Cambridge	5
Montgomery Office	6
Penn Center Office	1
Ardmore Office	1
Gimbels Office	1
Lansdale Office	4
Conshohocken Office	7
Northeast	22
Hatboro Office	3
Total	56

Harris, Tr. 2389–90

(314) The branches of PNB are in substantial direct competition with the branches of Girard in the area of business loans of $50,000 and over.

Ritter, Tr. 3169

(315) In the opinion of the vice president of the consumer credit department of Girard, branches of the Girard which are five miles from a branch of PNB compete with that branch for the making of personal loans.

C. Loans

1. General

(316) PNB competes with Girard for commercial and industrial loans, in single payment loans to individuals, in loans on residential property, in loans on business properties, in loans on securities, in installment loans on automobiles, in installment loans on consumer goods, and in a miscellaneous variety of other loans. Potts, Tr. 1369–1370; Ex. G–57, p. 31

(317) The average rate charged for loans in the foreign department of PNB on November 15, 1960, was 4.849 per cent, and for Girard the average rate was 5.28 per cent. In the area of commercial loans, PNB's average rate was 5.45 per cent and Girard's average rates were 5.18 per cent on collateral loans and 5.26 per cent on other commercial loans. The average rate on loans in PNB's time credit department was 9.95 per cent and the average rate in Girard's consumer credit department was 9.06 per cent. All of the above rates are simple interest rates. Ex. G–89

2. Commercial and industrial loans

(318) Of the total commercial and industrial loans of PNB in the four-county area on October 5, 1955, 78.97 per cent were for $50,000 or less. Of the total commercial and industrial loans of Girard in the four-county area on October 5, 1955, 64.27 per cent were for $50,000 or less. Ex. G–181

Tables 1, 2, 3

(319) PNB and Girard compete actively for commercial and industrial loans of all sizes. Both depend upon the four-county area for the bulk of their business in this important category.

(320) The merger of PNB and Girard would completely eliminate all competition between them in commercial and industrial loans.

3. Loans to individuals, installment and single payment

Satterfield, Tr. 2137
Ex. G-57, Schedule 7

(321) Girard and other Philadelphia banks are competitors of PNB in the consumer credit field.

Ex. G-6(s)
Ex. G-6A

(322) In 1960 PNB had 17 per cent of its total loaned funds committed to loans to individuals for household, family, and other personal expenditures and Girard had 31 per cent of its total loaned funds committed to that category.

Potts, Tr. 1377

(323) PNB and Girard make personal loans; PNB competes with Girard for personal loan business. PNB and Girard are competitors for the consumer credit business.

Potts, Tr. 1377

(324) Both PNB and Girard offer an executive loan service, which is a form of personal loan service; PNB competes with Girard in offering such service.

Satterfield, Tr. 2080, 2084, 2107

(325) PNB will cut its interest rate to meet competition in some cases.

Ex. G-194

(326) On February 20, 1961, the time credit manager of PNB, Mr. Robert Lowry, informed his superior he believed the bank

could raise the interest rate it was charging for financing sales of Sylvan Pools swimming pools "if and when the merger [with Girard] became a reality, and competition between banks eliminated." In this memorandum, Mr. Lowry indicated that PNB's chief competitor for the Sylvan Pool paper had been "the folks from Girard."

(327) Generally the interest rates charged by Girard on equipment loans are higher that those charged by PNB. Officers of the defendants have expressed uncertainty as to which of the two rates should be followed if this merger is approved. In this connection they pointed out to superiors that if the lower of the two rates are to be followed the resulting bank's income will suffer, both on equipment loans and in other categories where rates vary. Ex. G-141 Ex. G-145

(328) The recommendation of the equipment loans task force committee composed of officers of both defendants was that Girard's higher consumer credit interest rates be utilized by the resulting bank rather than the simple interest basis on which PNB makes equipment loans. The committee believed that competition would be such that the merged bank could obtain the higher rate. Ex. G-145

(329) There is intensive interest-rate competition in installment loans, both di- Ex. G-194, Exs. G-231 to G-245

rect and indirect, between PNB and other four-county commercial banks, including Girard.

Deane, Tr. 3673-3674

(330) The only two banks in Philadelphia that understand and operate effectively with companies in the automobile leasing business are PNB and Girard. Thus, the proposed merger would eliminate the only competition there is between Philadelphia banks for this specialized business.

Tables 4, 5, 6

(331) PNB and Girard compete actively for loans to individuals, both installment and single payment. Both depend upon the four-county area for the bulk of their business in these important areas of commercial bank lending.

(332) The merger of PNB and Girard would completely eliminate all competition between them in loans to individuals, both installment and single payment.

4. Real estate loans

Pl. D-94 Table 7

(333) In September, 1960, PNB had $47,535,000 in real estate loans in the four-county area. This represented 74% of its total real estate loans.

Pl. D-94 Table 7

(334) In September, 1960, Girard had $28,500,000 in real estate loans in the four-county area. This represented 84% of its total real estate loans.

(335) Both PNB and Girard compete actively for real estate loans. Both depend

upon the four-county area for more than 70% of their real estate loans.

(336) The merger of PNB and Girard would completely eliminate competition between them in real estate loans.

D. Trusts

(337) PNB competes with Girard for trust business. Potts, Tr. 1380–1381

(338) Since PNB entered the trust business in 1951, when it acquired the Ninth Bank and Trust Company and that bank's $17-million in trust assets, PNB's trust assets have grown to approximately $400 million. Girard administers approximately $2.5-billion of trust assets. Potts, Tr. 1380–1381

(339) PNB is a potential competitor of Girard in those trust services which it does not now provide. Brown, Tr. 2821

(340) Both PNB and Girard offer common trust fund plans, a very popular form of investment for smaller trust assets. PNB competes with Girard for this type of business. Potts, Tr. 1379–1380

(341) Both PNB and Girard offer estate planning services to individuals. PNB competes with Girard for such business. Potts, Tr. 1378–1379

(342) PNB as of November 15, 1960, had 2,570 personal trust accounts and Girard had 7,755 such accounts for a total of 10,325. In dollar volume, the assets under these trusts amounted to $361,300,000 Ex. G-41; Ex. G-67, p. 117

for PNB and $2,248,206,000 for Girard, or a total in excess of $2,600,000,000.

Potts, Tr. 1381–1382

(343) Both PNB and Girard act as trustees in administering pension and profit-sharing funds for corporations. PNB competes with Girard for this business.

Ex. G–87, p. 118

(344) PNB as of November 15, 1960, had 58 trustee and fiscal agency corporate trust accounts and Girard had 141 such accounts. The number of bond and coupon paying agencies were 65 and 158 for the respective banks, stock transfer agencies were 26 and 57 respectively, and PNB had 18 registrar accounts compared with 52 for Girard.

Potts, Tr. 1379
Brown, Tr. 2822

(345) Both PNB and Girard offer investment advisory services to individuals and corporations. PNB and Girard compete for such business.

Table 10
Ex. D–69

(346) Both PNB and Girard compete actively for trust business. Both depend upon the four-county area for more than 70 per cent of their personal trust business.

(347) The merger of PNB and Girard would completely eliminate competition between them for trust business.

E. Deposits

1. Time deposits

Potts, Tr. 1370; Ex. G–87, p. 31

(348) PNB competes with Girard for time deposits of individuals, partnerships, and corporations, for time deposits of state

and political subdivisions, and for time deposits of banks.

(349) On February 1, 1961, officers of the defendants compared seven existing practices of Girard with the practices of PNB in paying interest and assessing charges on savings accounts. In every instance the practice followed by Girard was more favorable to the bank than the practice of PNB. In every instance it was recommended that the Girard practice or one even more lucrative for the resulting bank be adopted. It was estimated that these practices had resulted in a saving of $138,000 in the interest Girard paid its savings depositors in 1960. Ex. G-143

(350) PNB and Girard compete actively for time deposits. Both depend upon the four-county area for the majority of their time deposits, except from foreign banks. Tables 11, 18

(351) The merger of PNB and Girard would completely eliminate competition between them for time deposits.

(352) PNB and Girard compete actively for time and savings deposits. Both depend upon the four-county area for the majority of their time and savings deposits. Table 11

(353) The merger of PNB and Girard would completely eliminate competition between them for time and savings deposits.

2. Demand deposits

Ex. G-7A

(354) As of June 15, 1960, the percentage of each bank's total deposits which were demand deposits was, for PNB, 86.5 per cent; for Girard, 80.6 per cent; and the average for all commercial banks with head offices in the four-county area was 81.2 per cent.

Potts, Tr. 1376
Brown, Tr. 2822

(355) PNB and Girard offer all kinds of checking accounts, including regular checking and special checking accounts. PNB competes with Girard in offering such checking account services.

Potts, Tr. 1488

(356) On November 15, 1960, there were 392 checking accounts in which a depositor maintained a balance of at least $10,000 in either PNB or Girard and also carried a balance in the other; these mutual accounts totaled over $265 million, of which PNB held over $163 million, and Girard over $101 million.

Table 12

(357) Both PNB and Girard compete actively for demand deposits. Both depend upon the four-county area for the bulk of their demand deposits.

(358) The merger of PNB and Girard would completely eliminate competition between them for demand deposits.

Table 12A

(359) Both PNB and Girard compete actively for IPC demand deposits. Both depend upon the four-county area for more than 70 per cent of their IPC demand deposits.

(360) The merger of PNB and Girard would completely eliminate competition between them for IPC demand deposits.

F. Other areas of competition

(361) The various service charges assessed by PNB are a significant factor in the bank's ability to retain and attract depositors, especially when the competition is from banks not headquartered in central Philadelphia. These banks may have operating costs unlike the center-city banks; they may also not be as inclined to set charges approximating those of the center-city banks. Ridgeway, 1155–56, 1175–76; Exs. G–102–107, 110–111, 113

(362) The various service charges proposed for PNB and Girard should this merger be approved are either higher than or the higher of those charged by PNB or Girard immediately prior to their application to merge in thirty instances. In four cases the lower of the two banks' existing service charges were selected, in two instances a charge somewhat below the higher of the two existing charges was chosen, and for seven of the charges no change was proposed. Ex. G–45A(8) Gaffey Tr. 320–328

(363) PNB competes with Girard for the business of correspondent banks. Potts Tr. 1384

(364) Both PNB and Girard offer their correspondent banks various services, including investment advice, clearance of Potts Tr. 1382–1384

checks, proof transactions, and collection of items.

Potts, Tr. 1374 (365) PNB competes with Girard in offering foreign department services to customers.

Potts, Tr. 1375 (366) PNB operates the largest foreign department of all banks in Philadelphia.

Potts, Tr. 1375 (367) Girard operates the second largest foreign department in Philadelphia.

Potts, Tr. 1373 (368) PNB competes with Girard in offering lock box services to corporate customers.

Potts, Tr. 1378 (369) Both PNB and Girard offer special tuition financing plans to individuals. PNB competes with Girard in offering such service.

Potts, Tr. 1376, 1378
Brown, Tr. 2821 (370) PNB provides a bank credit card service, and Girard provides a ready credit service, which are similar services and competitive.

Potts, Tr. 1370–1371 (371) Both PNB and Girard offer account reconciliation services and compete with each other in offering such services.

(372) Both PNB and Girard compete actively in offering many services to customers in the four-county area and elsewhere.

(373) The merger of PNB and Girard would completely eliminate competition between them in the many services which they both offer.

VII. INCREASE IN CONCENTRATION AS A RESULT OF THE MERGER

A. Increase in banking concentration generally

(374) As of December 31, 1960: (1) the largest 100 banks in the United States representing 0.74% of all commercial banks held $105,837,000,000 of deposits representing 46.2% of the deposits of all commercial banks in the United States, (2) the largest 10 banks representing 0.074% of all commercial banks held $46,436,000,000 of deposits representing 20.3% of the deposits of all commercial banks in the United States, (3) the largest commercial bank in the United States representing 0.0074% of all commercial banks in the United States held $10,285,000,000 of deposits representing 4.5% of the deposits of all commercial banks. Ex D-53

(375) As of June 30, 1956 in 124 cities with population between 50,000 and 100,000 there were 113 in which the largest bank had 35% or more and 66 in which the largest bank had 50% or more, of the banking resources in the city. Ex D-46

(376) As of June 30, 1956 in 38 cities with population between 100,000 and 150,000 there were 33 in which the largest bank had 35% or more, and 15 in which the largest bank had 50% or more, of the banking resources in the city. D-46

D-46 (377) As of June 30, 1956 in 13 cities with population between 150,000 and 200,000 there were 11 in which the largest bank had 35% or more, and 3 in which the largest bank had 50% or more, of the banking resources in the city.

D-46 (378) As of June 30, 1956 in 9 cities with population between 200,000 and 250,000 there were 7 in which the largest bank had 35% or more, and 4 in which the largest bank had 50% or more of the banking resources in the city.

D-46 (379) As of June 30, 1956 in 6 cities with population between 250,000 and 300,000 there were 4 in which the largest bank had 35% or more of the banking resources in the city.

D-46 (380) As of June 30, 1956 in 5 cities with population between 300,000 and 350,000 there were 5 in which the largest bank had 35% or more, and 3 in which the largest bank had 50% or more, of the banking resources in the city.

D-46 (381) As of June 30, 1956 in 4 cities with population between 350,000 and 400,000 there were 3 in which the largest bank had 35% or more, and 1 in which the largest bank had 50% or more, of the banking resources in the city.

(382) As of June 30, 1956 in 7 cities with population between 400,00 and 500,000 there were 4 in which the largest bank had 35% or more of the banking resources in the city. D-46

(383) As of June 30, 1956 in 18 cities with population of 500,000 and over there were 10 in which the largest bank had 35% or more, and 4 in which the largest bank had 50% or more, of the banking resources in the city. D-46

(384) As of June 30, 1956 of 224 cities with population of over 50,000 there were 190 in which the largest bank had 35% or more, and 96 in which the largest bank had 50% or more, of the banking resources in the city. D-46

(385) The number of commercial banks in the State of Pennsylvania decreased by 29.9 per cent from 1945 to 1959; the number of commercial banks with head offices in Philadelphia decreased from 45 to 14 in the twenty years 1940 to 1960; the number of independent commercial banks with head offices in the four counties decreased by 61 per cent in the period 1947 to 1960. Ex. G-12 Ex. G-183 Ex. G-185, p. 1

TABLE 18

(Ex. G–196)

[Concentration of deposits, loans, and capital funds of commercial banks in Philadelphia, Bucks, Delaware, and Montgomery Counties, as shown by relative size of 6 largest banks and effect of proposed consolidation of Philadelphia National Bank and Girard Trust Corn Exchange Bank on such concentration as of Oct. 3, 1960]

	Millions of dollars			Relative size (largest equals 100)		
	Total deposits	Total net loans	Total capital funds	Total deposits	Total net loans	Total capital funds

Broad Street Trust Co	132	99	13	8	10	7

Ex. G–34
Ex. G–35
Ex. G–185, p. 2
Ex. G–196 (See Table 18)

(386) In 1940, six of a total of 45 commercial banks controlled 72.60 per cent of all commercial bank assets in Philadelphia and in 1960, six of a total of 14 commercial banks controlled 91.42 per cent of all commercial bank assets in Philadelphia; the number of commercial banks in Philadelphia decreased by 68.9 per cent in the twenty years 1940 to 1960; concentration of assets of commercial banks has steadily increased in Philadelphia and in the four-county area in the ten years 1950–1960 and the proposed merger would substantially increase such concentration in both Phila-

delphia and the four-county area; the proposed merger would significantly change the relative size relationships among the six largest commercial banks in the four-county area and give the combined bank a substantial competitive lead over all remaining banks in the four-county area.

(387) There were 69 commercial banks in Bucks, Montgomery and Delaware Counties in 1947; in 1956 there were only 39 such banks. Keith, Tr. 1582

(388) The percentage of total bank assets controlled by the four largest banks in the four-county area was 49 per cent in 1947 and 64½ per cent in 1956. Keith, Tr. 1582

(389) Of the 31 banks eliminated through acquisitions in Bucks, Montgomery and Delaware Counties from 1947 to 1956, 14 were acquired by other banks within their own counties and 17 were acquired by Philadelphia banks across county lines. Keith, Tr. 1582–83

(390) In view of the pattern of mergers between commercial banks in the four-county area from 1946 to 1957, further reduction in the number of banks competing in Philadelphia and some of the larger communities in the four counties might significantly lessen competition. Keith, Tr. 1586–87

(391) The increased concentration of commercial banking has made it extremely difficult for the smaller banks to attract a share of the banking business of national type companies; such business normally Clarke, Tr. 889, 893

goes to the large bank which overshadows the others in terms of its size.

Keith, Tr. 1613

(392) In a number of mergers of four-county area banks with Philadelphia banks the terms offered by the latter were so attractive that stockholders of the local institution concluded their investment would be more profitable if they became part of the Philadelphia bank offering to merge than if they continued in their own locality as an independent bank.

Keith, Tr. 1616–17

(393) A Philadelphia bank which succeeds in locating a branch near a business firm located in a suburban area which also relies on downtown Philadelphia banks is in a better position to compete for the loan and other banking business of such a firm than is a Philadelphia bank which does not have such a branch or a much smaller local bank.

Potts, Tr. 1360

(394) At the present time, in terms of total assets, the largest bank in Philadelphia is The First Pennsylvania Banking & Trust Company, the second largest is PNB, and the third largest is Girard.

Potts, Tr. 1459–60

(395) At the present time, there is no difference between the ability of the largest bank in Philadelphia, the First Pennsylvania Banking & Trust Company, and the second largest, PNB, to attract qualified banking specialists and personnel.

(396) The bank resulting from the proposed merger of PNB and Girard would have a lending capacity approximately 78 per cent greater than that of the First Pennsylvania Banking & Trust Company, the nearest Philadelphia bank competitor after the merger. The increase in lending limit would give the proposed Philadelphia Girard National Bank a competitive advantage over First Pennsylvania. Potts, Tr. 1455 Potts, Tr. 1456

(397) The merger of two banks leads to mergers of other banks in the area. DuBois, Tr. 724

(398) A continuation of the merger trend in Pennsylvania would develop into a monopoly. Brumbaugh, Tr. 694

(399) If the merger of PNB and Girard is approved, the remaining Philadelphia commercial banks will find that greater efforts will be required to continue as effective competitors. Harris, Tr. 2378

(400) If the chief Philadelphia competitors of PNB and Girard are to be as vigorous rivals of the combining banks in all phases of commercial banking after the proposed merger as they have been in the past they could be so only by combining with one of the remaining substantial Philadelphia banks.

(401) Not all banks competing in an area are of equal competitive importance; consequently the elimination of a strong aggressive competitor would have a much

greater adverse effect on competition than elimination of a lesser bank even though in either case the number of competitors would be reduced by one.

B. Anticompetitive significance of the merger in light of the share of business done by defendants in the four-county area

1. Branches

Ex. G-1(8)

(402) PNB's 27 offices represent 9.5 per cent of the total number of banking offices of all commercial banks with head offices in the four-county area.

Girard's 38 offices represent 13.4 per cent of the total number of banking offices of all commercial banks with head offices in the four-county area.

The combined bank would have 65 offices, representing 22.9 per cent of the total number of banking offices of all commercial banks with head offices in the four-county area.

The next 6 banks combined have 128 offices, representing 44.6 per cent of the total number of banking offices of commercial banks with head offices in the four-county area. These 6 banks all have head offices in Philadelphia County.

Five other commercial banks, one private bank, and two companies with commercial bank charters, all of which have head offices in Philadelphia, operate a total of 22 offices. One private bank, with a head of-

fice in New York, has an office in Philadelphia.

These 9 commercial banks operate a total of 23 offices, representing 8.1 per cent of the total number of banking offices of commercial banks with head offices in the four-county area.

One bank in Montgomery County operates 11 offices, representing 3.9 per cent of the total number of banking offices of commercial banks with head offices in the four-county area. Fifteen other commercial banks, with head offices in Montgomery County, operate a combined total of 33 offices, representing 11.6 per cent of the total number of banking offices of commercial banks with head offices in the four-county area.

Nine commercial banks with head offices in Bucks County operate 15 offices, representing 5.3 per cent of the total number of banking offices of commercial banks with head offices in the four-county area.

In Delaware County there is only one bank with the head office in that county and 9 offices, representing 3.2 per cent of the total number of banking offices of commercial banks with head offices in the four-county area.

(403) The PNB-Girard combined total of 65 offices out of 284 banking offices of commercial banks with head offices in the four-county area represents a significant increase in concentration in the area.

2. Assets

Ex. G-16(S)
Ex. G-8(S)

(404) The PNB, as of June 30, 1960, had total assets of $1,086,147,000, equal to 23.1 per cent of the $4,698,276,000 assets of all commercial banks with head offices in Philadelphia and equal to 21 per cent of the $5,169,361,000 assets of all commercial banks with head offices in the four-county area.

Girard, as of the same date, had total assets of $757,572,000, equal to 16.1 per cent of the assets of all commercial banks with head offices in Philadelphia and equal to 14.7 per cent of the assets of all commercial banks with head offices in the four-county area.

The largest commercial bank, as of the same date, had total assets equal to 25.2 per cent of the assets of all commercial banks with head offices in Philadelphia and 22.9 per cent of the assets of all commercial banks with head offices in the four-county area.

(405) The combination of PNB and Girard would result in a substantial increase in the concentration of bank assets. The combined bank would hold 39.2 per cent of the total assets of all commercial banks with head offices in Philadelphia and 35.7 per cent of the total assets of all commercial banks with head offices in the four-county area.

CHART II

Concentration of Assets of Insured Commercial Banks in Philadelphia as of June 30, 1950 and June 30, 1960 and Effect of Proposed Merger Upon Such Concentration

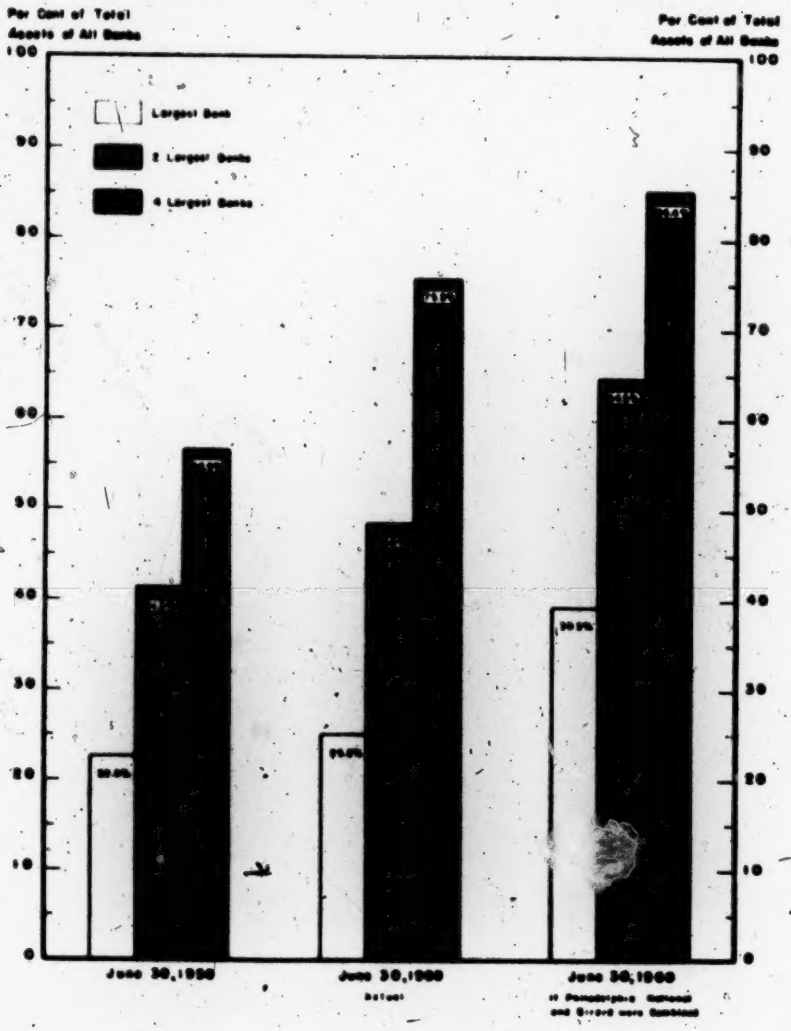

CHART III

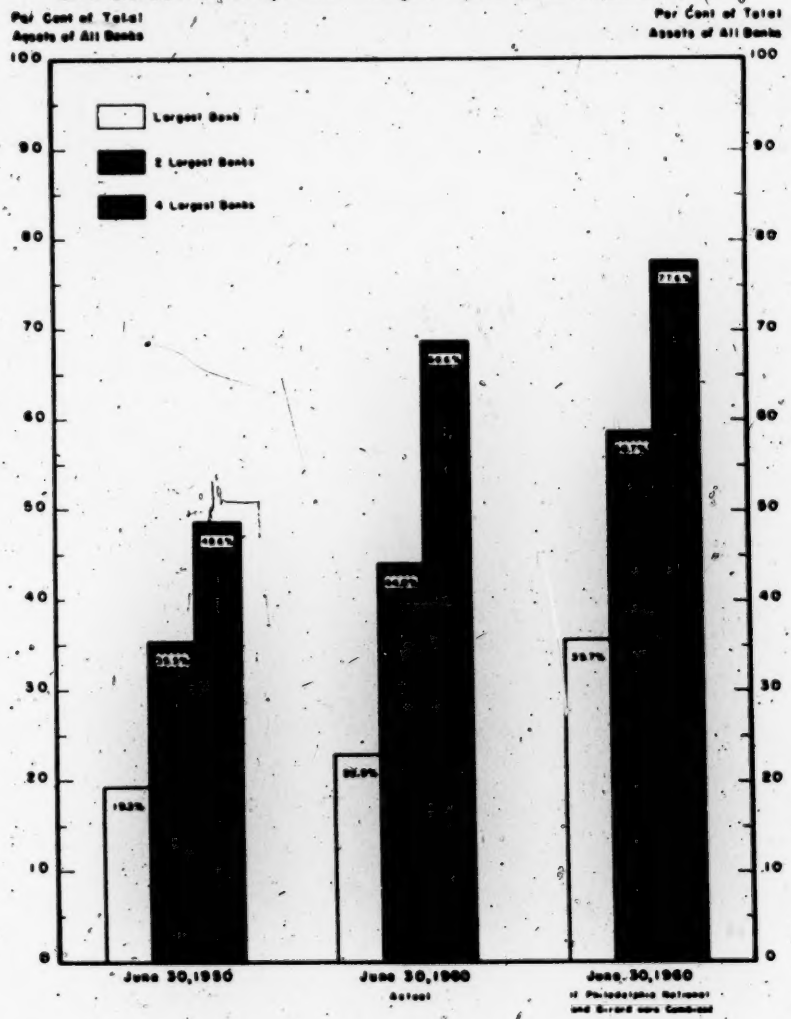
Concentration of Assets of Insured Commercial Banks in Philadelphia, Delaware, Montgomery and Bucks Counties, Pennsylvania as of June 30, 1950 and June 30, 1960 and Effect of Proposed Merger upon Such Concentration



3. Capital funds

(406) PNB as of Oct. 3, 1960 had total capital funds of $94,590,000, equal to 19.6% of the $482,840,000 capital funds of all commercial banks with head offices in the four-county area. Ex. G-4(S)

The Girard Trust Corn Exchange Bank as of Oct. 3, 1960 had total capital funds of $74,981,000, equal to 15.5% capital funds of all commercial banks with head offices in the four-county area.

The next three largest Philadelphia commercial banks, as of the same date, had total capital funds equal to 19.7%, 12.0%, and 9.0% respectively, of the capital funds of all commercial banks with head offices in the four-county area.

The 38 remaining banks as of the same date had a combined total of capital funds equal to 24.2% of capital funds of all commercial banks with head offices in the four-county area.

(407) The combination of PNB and Girard would result in a substantial increase in the concentration of capital funds. The combined bank would hold more than one-third of the capital funds of all commercial banks with head offices in the four-county area.

4. Loans

(408) PNB, as of October 3, 1960, had total net loans of $548,598,000, equal to Ex. G-5(S)

19.8 per cent of the $2,774,249,000 of total loans of all commercial banks with head offices in the four-county area.

Girard, as of October 3, 1960, had total net loans of $406,660,000, equal to 14.6 per cent of total loans of all commercial banks with head offices in the four-county area.

The next three largest commercial banks in Philadelphia, as of the same date, had 23.8 per cent, 10.2 per cent, and 9.1 per cent, respectively, of total net loans of all commercial banks with head offices in the four-county area.

The remaining banks with head offices in the four-county area, as of the same date, held a combined total of only 22.5 per cent of total net loans of all commercial banks with head offices in the four-county area.

(409) The combination of PNB and Girard would eliminate substantial competition between the banks and would result in a substantial increase in the concentration of total loans. The combined bank would hold approximately 34 per cent of the loans of all commercial banks with head offices in the four-county area.

Ex. G-6(S)

(410) PNB, as of June 15, 1960, had Commercial and Industrial Loans of $295,514,000, equal to 25.4 per cent of the $1,161,350,000 of Commercial and Industrial Loans of all commercial banks with

head offices in Philadelphia and equal to 24.3 per cent of the total $1,215,316,000 of such loans of all commercial banks with head offices in the four-county area.

Girard, as of the same date, had Commercial and Industrial Loans of $200,427,000, equal to 17.3 per cent of the Commercial and Industrial Loans of all commercial banks with head offices in Philadelphia and equal to 16.5 per cent of such loans of all commercial banks with head offices in the four-county area.

(411) The combination of PNB and Girard would eliminate substantial competition between the banks and would result in a substantial increase in the concentration of Commercial and Industrial Loans. The combined bank would hold more than 42 per cent of the Commercial and Industrial Loans of all commercial banks with head offices in Philadelphia and more than 40 per cent of such loans of all commercial banks with head offices in the four-county area.

(412) PNB, as of June 15, 1960, had Ex. G-6(S) total Loans to Individuals of $85,527,000, equal to 11.8 per cent of the $724,840,000 of total Loans to Individuals of all commercial banks with head offices in Philadelphia and equal to 10.8 per cent of the $788,957,000 of such loans of all commercial banks with head offices in the four-county area.

Girard, as of the same date, had total Loans to Individuals of $121,165,000, equal to 16.7 per cent of total Loans to Individuals of all commercial banks with head offices in Philadelphia and equal to 15.4 per cent of such loans of all commercial banks with head offices in the four-county area.

(413) The combinaton of PNB and Girard would eliminate substantial competition between the banks and would result in a substantial increase in the concentration of total Loans to Individuals. The combined bank would hold 28.5 per cent of the total Loans to Individuals of all commercial banks with head offices in Philadelphia and 26.2 per cent of such loans of all commercial banks with head offices in the four-county area.

(414) PNB, as of June 15, 1960, had total Real Estate Loans of $62,865,000, equal to 27.3 per cent of $230,569,000 of total Real Estate Loans of all commercial banks with head offices in Philadelphia and equal to 20.1 percent of $313,020,000 of such loans of all commercial banks with head offices in the four-county area.

Girard, as of the same date, had total Real Estate Loans of $32,708,000, equal to 14.2 percent of total Real Estate Loans of all commercial banks with head offices in Philadelphia and equal to 10.4 percent of

such loans of all commercial banks with head offices in the four-county area.

(415) The combination of PNB and Girard would eliminate substantial competition between the banks and would result in a substantial increase in the concentration of Real Estate Loans. The combined bank would hold 41.5 percent of the total Real Estate Loans of all commercial banks with head offices in Philadelphia and 30.5 percent of such loans of all commercial banks with head offices in the four-county area.

5. Personal trusts

(416) Girard had personal trust assets with a book value of $2,248,206,000, equal to 23.9 percent of the total $9,396,371,000 personal trust assets held by 10 of the 11 commercial banks with head offices in Philadelphia which operate trust departments and equal to 23.5 percent of the total $9,550,066,000 of such assets held by 18 of the 25 commercial banks with head offices in the four-county area which operate trust departments. Ex. D-69, Part II

PNB had personal trust assets with a book value of $361,300,000, equal to 3.8 percent of such assets held by 10 of the 11 commercial banks with head offices in Philadelphia which operate trust departments and equal to 3.8 percent of such assets held by 18 of the 25 commercial banks with head

offices in the four-county area which operate trust departments.

(417) The combination of Girard and PNB would result in a substantial increase in the concentration of personal trust assets in the four-county area. The combined bank would hold about 28 percent of all personal trust assets held by 9 of the 10 commercial banks with head offices in Philadelphia which operate trust departments and about 27.3 percent of all such assets held by 17 of the 24 commercial banks in the four-county area which operate trust departments.

6. Deposits

Jennings, Tr. 3346; Ex. D-48, p. 56; Ex. D-51

(418) Concentration of bank deposits in the five largest Philadelphia banks has increased substantially over the last several decades, in that the five largest commercial banks on December 31, 1920, held 31.6 per cent of total commercial bank deposits in Philadelphia County, 65.4 per cent on December 31, 1934, and 85.1 per cent on December 31, 1958.

Ex. G-2(S)

(419) The Philadelphia National Bank as of Oct. 3, 1960, had total deposits of approximately $986,634,000, equal to 21.3 per cent of the $4,623,007,000 total deposits of all commercial banks with head offices in the four-county area.

The Girard Trust as of Oct. 3, 1960, had total deposits of $668,823,000, equal to

14.5 per cent of the total deposits of all commercial banks with head offices in the four-county area.

The two banks combined would have total deposits of approximately $1,655,457,000, equal to 35.8 per cent of the total deposits of all commercial banks with head offices in the four-county area.

The next three large commercial banks as of the same date had total deposits representing 22.1, 9.9, and 9.3 per cent, respectively, of the total deposits of all commercial banks with head offices in the four-county area.

The five largest banks thus hold approximately 77.1 per cent of the total deposits of all commercial banks with head offices in the four-county area.

The 38 remaining banks thus have only 22.9 per cent of the total deposits of all commercial banks with head offices in the four-county area.

(420) The combination of PNB and Girard would result in the concentration of more than one-third of all deposits of commercial banks in the four-county area in one institution.

(421) The PNB as of Oct. 3, 1960, had deposits of individuals, partnerships and corporations (IPC deposits) totaling $603,534,000, equal to 16.8 per cent of the total $3,598,701,000 IPC deposits of commercial

Ex. G-2(8)

banks with head offices in the four-county area.

Girard as of the same date had IPC deposits of approximately $560,039,000, equal to 15.6 per cent of total IPC deposits of all commercial banks with head offices in the four-county area.

(422) The combined bank would have total IPC deposits of approximately $1,163,573,000, representing 32.4 per cent of all IPC deposits of all commercial banks with head offices in the four-county area.

The next three large commercial banks as of the same date had IPC deposits representing 21.1 per cent, 10.5 per cent, and 9.9 per cent, respectively, of all IPC deposits of commercial banks with head offices in the four-county area.

The remaining 38 banks with head offices in the four-county area had a combined total of 26.4 per cent of IPC deposits of all commercial banks with head offices in the four-county area.

(423) The combination of PNB and Girard would result in a substantial increase in the concentration of deposits. The combined bank would hold virtually one-third of all deposits of all commercial banks with head offices in the four-county area.

(424) PNB as of June 15, 1960, had total time deposits of $124,325,000, equal to 18.5 per cent of the $670,525,000 of total time deposits of all commercial banks with head offices in Philadelphia and equal to 14.7 per cent of the $843,938,000 total time deposits of all commercial banks with head offices in the four-county area. Ex. G-7(8)

Girard Trust Corn Exchange Bank, as of the same date, had total time deposits of $128,339,000, equal to 19.1 per cent of the total time deposits of all commercial banks with head offices in Philadelphia and equal to 15.2 percent of the total time deposits of all commercial banks with head offices in the four-county area.

(425) The combination of PNB and Girard would result in a substantial increase in the concentration of time deposits. The combined bank would hold 37.6 per cent of the total time deposits of all commercial banks with head offices in Philadelphia and 29.9 per cent of such deposits of all commercial banks with head offices in the four-county area.

(426) Philadelphia National Bank, as of June 15, 1960, had total demand deposits of $796,942,000, equal to 23.5% of the $3,393,752,000 of total demand deposits of all commercial banks with head offices in Philadelphia, and equal to 21.9% of the $3,640,443,000 of total demand deposits of Ex. G-7(8)

all commercial banks with head offices in the four-county area.

Girard, as of June 15, 1960, had total demand deposits of $533,478,000, equal to 15.7% of total demand deposits of all commercial banks with head offices in Philadelphia, and equal to 14.7% of total demand deposits of all commercial banks with head offices in the four-county area.

(427) The combination of Philadelphia National Bank and Girard would result in a substantial increase in the concentration of demand deposits. The combined bank would hold 39.2% of the total demand deposits of all commercial banks with head offices in Philadelphia, and 36.6% of such deposits of all commercial banks with head offices in the four-county area.

Rx. G-7(8)

(428) Philadelphia National Bank, as of June 15, 1960, had total IPC demand deposits of $509,561,000, equal to 19.8% of the $2,581,536,000 of total IPC demand deposits of all commercial banks with head offices in Philadelphia, and equal to 18.2% of the $2,798,478,000 of total IPC demand deposits of all commercial banks with head offices in the four-county area.

Girard, as of June 15, 1960, had total IPC demand deposits of $445,201,000, equal to 17.2% of total IPC demand deposits of all commercial banks with head offices in Philadelphia, and equal to 15.9% of such

34.33

deposits of all commercial banks with head offices in the four-county area.

(429) The combination of Philadelphia National Bank and Girard would result in a substantial increase in the concentration of IPC demand deposits. The combined bank would hold 37.0% of the total IPC demand deposits of all commercial banks with head offices in Philadelphia and 34.1% of all such deposits of all commercial banks with head offices in the four-county area.

(430) PNB, as of October 3, 1960, had deposits due to banks of $208,012,000, equal to 39 per cent of the total $533,209,000 of such deposits of the six commercial banks in Philadelphia that hold significant amounts of due-to-bank deposits. Tr. 6-8

Girard, as of the same date, had deposits due to banks of $55,099,000, equal to 10.3 per cent of such deposits of the six commercial banks in Philadelphia that hold significant amounts of due-to-bank deposits.

The largest bank, as of the same date, had 33.1 per cent of such deposits of the six commercial banks that hold significant amounts of due-to-bank deposits. The three remaining banks as of the same date, had a combined total of only 17.6 per cent of deposits due to banks.

(431) The combination of PNB and Girard would result in a substantial increase in the concentration of deposits due to

banks. The combined bank would hold more than 49 per cent of the deposits due to banks held by the six banks in Philadelphia that hold significant amounts of such deposits.

C. Prior mergers by defendants and competition eliminated by such mergers

Ex. G-138

(432) A substantial part of the present size of both PNB and Girard has been achieved as the result of mergers and consolidations in the last ten years.

For PNB in the period December 31, 1949, to December 31, 1959, acquisitions and consolidations of other banks accounted for 63 per cent of total deposit growth, 12 per cent of total loan growth, and 59 per cent of total asset growth.

For Girard in the same period, acquisitions and consolidations accounted for 91 per cent of total deposit growth, 37 per cent of total loan growth, and 85 per cent of total asset growth.

Ex. G-197
Ex. G-198

(433) The largest share of the growth of PNB and Girard between Dec. 31, 1949, and Dec. 31, 1959, has been by acquisition of other banks. The extent of this growth

as a percentage of deposits, loans, assets and capital accounts on Dec. 31, 1949, is as follows:

	Deposits	Loans	Assets	Capital accounts
PNB	*Percent*	*Percent*	*Percent*	*Percent*
Growth by acquisition	26	28	26	26
Other growth	15	204	18	24
Total growth	41	232	43	50
GIRARD				
Growth by acquisition	186	170	185	163
Other growth	19	289	33	100
Growth by sale of stock				25
Total growth	205	459	218	288

PNB acquisitions

(434) PNB launched its merger program in 1950 because of management's belief that if PNB was to maintain its position, the quality of its services, and its reputation, it could no longer confine itself solely to the wholesale banking business. Potts, Tr. 1500–1501

(435) The Philadelphia National Bank acquired the Ninth Bank & Trust Company on September 21, 1951. Potts, Tr. 1347–1350 Ex. G–57, p. 17

At the time of its acquisition by PNB, the Ninth Bank and Trust Company competed with PNB in making certain loans to larger corporations in the northeast section of the city of Philadelphia.

Prior to the acquisition of the Ninth Bank & Trust Company in 1951, PNB was not in the so-called retail bank business; PNB was a wholesale bank and at the end of 1950, of its 11,000 to 12,000 accounts, 1,000 accounts were represented by cor-

respondent banks and foreign accounts.

The acquisition in 1951 by PNB of the Ninth Bank & Trust Company marked the entry of PNB into the personal trust business.

At the time of this acquisition, both PNB and the Ninth Bank & Trust Company were engaged in the commercial and industrial loan business and competed with each other with respect to certain industrial corporations and large individual depositors.

Potts, Tr. 1351, 1352, 1402 Rx. G-57, p. 18

(436) The PNB acquired the First National Bank of Conshohocken on September 25, 1953.

The move across county lines by PNB in acquiring the First National Bank of Conshohocken was opposed by various banks in Montgomery and Bucks Counties.

At the time of this acquisition, PNB and the First National Bank of Conshohocken were in direct competition for large corporate and borrowing accounts in Conshohocken.

The larger industrial corporations in Conshohocken maintained accounts in PNB's central city office, 15 or 16 miles distant.

Potts, Tr. 1423 Rx. G-176A

(437) Aggressive expansion programs, including the acquisition of other banks, by the Pennsylvania Company for Banking & Trust (now the First Pennsylvania

Banking & Trust Co.) and the Girard had, by 1953, put these banks in a position to "breathe down the neck" of PNB, thus threatening its claim to being the largest bank in Philadelphia.

(438) PNB used the aggressive expansion programs of its nearest rivals, the Pennsylvania Company for Banking & Trust (now the First Pennsylvania Banking & Trust Co.) and Girard, to justify in part its acquisition in 1953 of the National Bank of Conshohocken when discussing this acquisition with an official representative of the Comptroller of the Currency. Potts. Tr. 1483 Ex. G-126A

(439) PNB acquired the Chester-Cambridge Bank & Trust Company on February 20, 1954. Potts. Tr. 1352 Ex. G-57, p. 18

(440) PNB acquired the First National Bank of Lansdale on February 20, 1954. Potts. Tr. 1353 Ex. G-57, p. 19

At the time of this acquisition, both PNB and the First National Bank of Lansdale competed for the larger corporate accounts in the Lansdale area.

(441) PNB acquired the Montgomery National Bank of Norristown on February 20, 1954. Potts. Tr. 1354; Ex. G-57, p. 19

At the time of this acquisition, both PNB and the Montgomery National Bank of Norristown competed for the commercial and industrial loan business of the larger corporate concerns in the Norristown area.

Potts, Tr. 1355–1356; Ex. G–57, p. 20

(442) PNB acquired The Hatboro National Bank on December 9, 1955.

At the time of this acquisition PNB and The Hatboro National Bank competed for commercial and industrial loan business from corporations in the Hatboro area.

Potts, Tr. 1356; Ex. G–57, p. 20

(443) PNB acquired The Citizens National Bank of Pottstown on December 9, 1955.

At the time of this acquisition PNB and The Citizens National Bank of Pottstown competed in in the commercial and industrial loan area.

Potts, Tr. 1356–1357; Ex. G–57, p. 21

(444) PNB acquired The Delaware Valley Bank & Trust Company on November 9, 1956.

At the time of this acquisition, PNB and The Delaware Valley Bank & Trust Company competed in offering commercial and industrial loans.

Potts, Tr. 1357; Ex. G–57, p. 22

(445) PNB acquired The Gimbel Brothers Bank & Trust Company on July 11, 1958.

At the time of this acquisition, PNB and The Gimbel Brothers Bank & Trust Company competed for savings and personal checking accounts.

(446) The nine acquisitions made by PNB since 1951 added the following offices, loans, and deposits: Ex. G-57, pp. 17-22

Date	Bank	Number of offices	Loans (add 000)	Deposits (add 000)
9-21-51	9th Bank & Trust	5	$6,677	$50,739
9-25-53	1st Natl Bank of Conshohocken	1	3,409	14,890
2-20-54	Chester-Cambridge Bank & Trust	2	6,647	26,978
2-20-54	1st Natl Bank of Lansdale	1	5,627	14,472
2-20-54	Montgomery Natl Bank of Norristown	1	1,788	10,401
12- 9-55	Hatboro Natl Bank	1	2,795	9,118
12- 9-55	Citizens Natl Bank & Trust of Pottstown	1	3,633	8,478
11- 9-56	Delaware Valley Bank & Trust	5	11,802	26,124
7-11-58	Gimbel Bros. Bank & Trust	1	0	11,768

Girard acquisitions

(447) By 1950 Girard decided that a program of bringing a more complete line of services to bank customers in areas not conveniently located near its main office by establishing new branch offices would be too costly and could not be completed in time to achieve the progress in the banking business which Girard desired. Brown, Tr. 2558-59

(448) In 1950 Girard decided that it could rapidly and economically enlarge the retail bank services offered by it and increase the number of offices providing its services by merging with the Corn Exchange National Bank and Trust Company. Brown, Tr. 2559

(449) By 1950 the Corn Exchange National Bank and Trust Company had established 12 offices in Philadelphia and had developed retail bank services such as consumer credit and special checking accounts. Brown, Tr. 2559, 2560, 2562

Brown, Tr. 2563–64

(450) After the Girard Trust Corn Exchange merger was completed in 1951 that bank surveyed the Philadelphia area with a view to establishing offices in sections of the city in which it was not then represented. In furtherance of this purpose Girard merged with the National Bank of Germantown in the Germantown and Chestnut Hill areas in 1953 and with the North Philadelphia Trust Company at Broad Street and Erie Avenue in 1954. When merged both of these banks had only one office.

Ex. G-172

(451) Girard paid premiums for the offices it acquired by merger outside of Philadelphia County.

Brown, Tr. 2565

(452) In order to retain some of its old customers and to attract the banking business of others who were flocking into the Montgomery County area, contiguous to Philadelphia, Girard acquired in 1957 the National Bank of Narberth and the Ambler National Bank, both of which were operating three offices in Montgomery County.

Keller, Tr. 3115, 3125–314.
Ex. G-250
Brown, Tr. 2562–2569
Ex. G-249
Beadle, Tr. 894
Ex. G-57, p. 26

(453) A few months prior to the time the respective boards of directors of the Ambler National Bank and Girard approved the merger of the two banks, and while the two banks were still competitors to some extent, representatives of the two banks discussed the advisability of the Ambler National Bank proceeding to open

a new branch office in a new industrial center; the purpose of this discussion was to determine whether this step would make the Ambler National Bank attractive at a future time as a bank to be acquired by a large Philadelphia bank. The Ambler National Bank subsequently did establish the proposed branch, shortly before its merger with Girard.

(454) One of the reasons Girard acquired the Ambler National Bank was the fact that Fort Washington Industrial Park was being established at the time and a newly created branch of Ambler National in this park presented a chance to participate in the growth of business and population in the area.

Brown, Tr. 2565-66
Ex. G-249
Ex. G-57, p. 26
Beadle, Tr. 894

The offer made to the Ambler National Bank by the Girard in 1955 called for a premium amounting to 89% over the current net worth and 100% over market value of the Ambler National Bank.

In 1955 Girard offered to pay the Ambler National Bank stockholders a premium of $501,836, or 89% of the real net worth of the Ambler National Bank if they would agree to merge with Girard. In terms of the fair market value of the stock of these two banks, the premium offered by Girard was twice the value of the Ambler National stock.

The Ambler National Bank was merged with Girard on October 11, 1957. Ambler National Bank operated offices in Ambler, Flourtown, and Fort Washington.

The Ambler office of Girard does a residential banking business; and serves commercial customers and industrial customers.

Beadle, Tr. 933-936; G-77, p. 6; G-77E, p. 6; G-77C, p. 6

(455) Prior to the merger of National Bank of Narberth with Girard, Girard had existing business in the area served by the three offices of Narberth.

Girard and National Bank of Narberth were competitors in the commercial banking business.

Ex. G-67, p. 27

(456) The Upper Darby National Bank merged with Girard on April 25, 1958.

At the time Upper Darby National Bank was merged with Girard, Upper Darby operated its main office at 6912 Market St. and eleven branches in Delaware County.

Brown, Tr. 3870

(457) All of the banks acquired by Girard were competitors of Girard.

Ex. G-57, pp. 23-28

(458) The six mergers of Girard in the past ten years added the following offices, loans, and deposits:

Date	Bank	Number of offices	Loans (000)	Deposits (000)
6-15-51	Corn Exchange Natl Bank & Trust	12	$96,782	$288,618
9-11-53	Natl Bank of Germantown & Trust	1	9,781	35,371
1-22-54	No. Phila. Trust	1	5,469	19,166
10-11-57	Natl Bank of Narberth	3	4,467	12,539
10-11-57	Ambler Natl	3	3,568	8,799
4-25-58	Upper Darby Natl	12	22,307	48,311

(459). The wave of mergers in Philadelphia reduced the number of commercial banks from 39 in 1950 to 23 in 1956. Harris Tr 2427

(460) In the foreseeable future, the president of PNB does not know how big a bank is needed to serve the needs of Philadelphia. Harris Tr 1407

(461) PNB and Girard have already made surveys of possible sites for the opening of additional branch offices should the merger be approved. PX G 137, PX G 142

(462) Girard has been a substantial active competitor in the Philadelphia four-county area and its elimination through merger with PNB will result in a decrease in competitive pressure in the four-county area. The harmful effects of this decrease will be primarily felt by the small and intermediate-size borrowers since they are limited to banks in this area to obtain needed loans.

VIII. OPINIONS SUBMITTED ON THE PROPOSED MERGER UNDER SECTION 18(c) OF THE FEDERAL DEPOSIT INSURANCE ACT, AS AMENDED

(463) Pursuant to the provisions of section 18(c) of the Federal Deposit Insurance Act, as amended (12 U.S.C.A. § 1828 (c)), the Federal Reserve Board, the Federal Deposit Insurance Corporation, and the Attorney General were required to submit reports on the competitive factors in-

volved in the proposed merger to the Comptroller of the Currency. These reports were submitted; they have been admitted in this record as Exhibits G–161, G–163, and G–162.

(464) Each of these reports included an analysis of the effect of the proposed merger on banking competition in Philadelphia County and the three contiguous counties of Delaware, Montgomery and Bucks. Both of the banking agencies, as well as the Attorney General, concluded that the proposed merger would have a significant adverse effect on competition in the four county area. The conclusions of these reports are as follows:

A. Federal Reserve Board

Ex. G–161 The Board of Governors of The Federal Reserve System asserted that the four counties of Philadelphia, Delaware, Montgomery, and Bucks is the primary banking area to be considered in appraising competitive factors of the proposed merger and concluded that the merger would alter the present competitive balance between Philadelphia banks to a significant degree. The Board of Governors stated its conclusion as follows:

> The proposed consolidation of two of the three largest banks in the area would substantially lessen both existing and potential competition.

> The resulting bank would obtain a dominant position, with attending competitive advantages, strongly adverse to the preservation of effective competition.

B. Federal Deposit Insurance Corporation

The Federal Deposit Insurance Corporation, in summarizing its appraisal of the competitive factors, stated that in Philadelphia and the three contiguous counties in which the Philadelphia banks can have branches, consummation of the proposal "... would adversely affect competition to a significant degree." The FDIC stated its final conclusion as follows: Ex. G-168

> Therefore, it is concluded that the effect of the proposed consolidation on competition would be adverse as to Philadelphia and immediate suburbs but not adverse in the regional, national, and international fields of competition.

C. The Attorney General

The report on competitive factors submitted by the Attorney General of the United States concluded as follows: Ex. G-168

> It is the conclusion of this Department that the proposed merger of The Philadelphia National Bank and the Girard Trust Corn Exchange Bank would result in a substantial lessening of commercial banking

competition and a tendency toward monopoly in the ways described above. These adverse competitive effects of the merger would not be significantly offset by the improved competitive position of the resulting bank in relation to the still larger banks in New York and a few other cities.

IX. ANALYSIS OF REASONS ADVANCED FOR THE MERGER

A. Main reasons set forth by defendants

Increased lending limit and resources

Brown, Tr. 3788, 3790

(465) PNB and Girard believe that by merging they will be able to increase the total deposits and lendable funds in Philadelphia through an increase in their financing of so-called national and international companies. As a result, they believe, they will have more money to meet the expanding credit needs of business and individuals in the Philadelphia area.

Brown, Tr. 2718

(466) The chief purpose the president of Girard envisioned in seeking to merge with PNB was the increase of deposits in Philadelphia banks which he thought would result from the enlarged bank's ability to attract regional and international business and keep Philadelphia business from going elsewhere for banking accommodations.

Brown, Tr. 2718

(467) The president of Girard considered that the extensive time and effort ex-

pended by Philadelphia banks each year in seeking to attract business away from their local competitors had resulted in little if any net gain for any of the banks.

(468) Defendants believe PNB-Girard combined would have the necessary capital resources to build business, improve personnel, increase advertising, establish specialized advisory departments, and better publicize the advantage to businessmen of establishing plants in the Philadelphia community. In their view PNB and Girard separately do not have the resources to be able to do all of these things. Brown, Tr. 2720–21, 2715

Foreign department operations

(469) PNB and Girard hope that through merger they will be able to expand the operations of their foreign department and in particular secure a larger share of the banking business connected with the port of Philadelphia. Ex. G–57, pp. 7–10

Competition from New York

(470) PNB and Girard believe that through merger they will be better able to compete with the larger banks in nearby New York City for the business of large companies especially those located in or near Philadelphia. Ex. G–57, pp. 7–10

B. Analysis

(471) PNB and Girard are both substantial, well-run financial institutions. Goodman, Tr. 2029

Keith, Tr. 1603–05

(472) Although PNB and Girard as well as other Philadelphia banks which have participated in previous mergers have asserted that desire to reduce expenses is one reason they wish to merge, the best evidence is that no significant economies have ever been achieved through such mergers.

Potts, Tr. 1500–01
Goodman, Tr. 2043

(473) Relatively speaking, the middle-income group is becoming a more stable source of deposits and loans for commercial banks than are large business accounts.

Potts, Tr. 1360

(474) Both PNB and Girard are in strong financial condition at the present time and the decision to merge the two banks was not based on financial necessity.

1. Need for a Philadelphia bank with a larger lending limit and resources

a. PNB's larger loans

McDowell, Tr. 2854–2878
Ex. D–26

(475) The customers listed on D–26 comprise all those to which PNB has extended its maximum line of credit of $8,000,000 as of the date of the exhibit; but only 10 of these had made average commercial loans of $1 million or more from PNB in 1960, six had made loans under $1 million, and 10 had made no loans at all from PNB. In addition several of the customers had not borrowed from PNB for the past several years, a few had made no use of the lending facilities of the bank for as much

as 15 years, and one had not borrowed from the bank since 1925.

(476) The borrowing needs of many, if not all, of the customers listed on D–26 are such that even with the $15 million lending limit of the proposed merged bank, these needs could not be met without the participation of banks in other cities. McDowell, Tr. 2888

(477) The executive vice president and senior lending officer of PNB testified that ten of the 27 companies listed on exhibit D–26 would take or would want the higher lending limit of the new bank if the proposed merger is consummated. Of these ten, four now have lines of credit with both PNB and Girard (16, 17, 22 and 24 on D–26 and H, AA, V and I in D–40). Should the merger be consummated, the largest amount by which the line of credit of any of these four could be increased would be $3 million for #17 on D–26 (which is AA on D–40) and this customer already uses 15 banks in 8 cities in addition to its banking connections in Philadelphia. McDowell, Tr. 2879–2890 Ex. G–200, p. 4

(478) PNB performs various specific services for each of the so-called national customers listed on exhibit D–26, which are directly related to the extensive business activities conducted in and around Philadelphia County by each customer; these services justify the large balances main- McDowell, Tr. 2854–2878; 2949–2953; 2957

tained by the listed customers. These services, primarily local in nature, include check collections, the supply of currency and coin, credit information, money wire transfer, lockbox service, account reconciliation, and payroll accounts.

Potts. Tr. 1415-1418

(479) A total of only five borrowers within the year 1960 obtained loans from banks in New York or other cities due to the low lending limits of Philadelphia banks; however, none of these borrowers as of 12/22/60 had exhausted the existing line of credit which each had with both Girard and PNB.

Potts. Tr. 1489

(480) As of December 22, 1960, only two of the loans outstanding at PNB were at the lending limit ($8,000,000) and there were no outstanding loans at the lending limit of Girard.

Ex. G-146
Ex. G-147

(481) PNB, in the last five years, has had requests for loans or lines of credit in excess of its lending limit to one borrower in only five instances, involving three customers of PNB. In three of those instances PNB either gave participations to other banks or helped arrange with other banks so that the full amount of the request was made available.

b. PNB's larger lines of credit

Potts. Tr. 1490

(482) As of December 22, 1960, there were only 16 lines of credit extended by PNB to the maximum which could be

granted ($8,000,000) and there were only 4 lines of credit extended by Girard to the maximum which could be granted ($6,000,000).

(483) Of the 27 customers of PNB in 1960 with lines of credit of $8,000,000 or over, 20 have headquarters or large plants in the four-county area, 1 is in Chester County, Pennsylvania, 1 in Bryn Mawr, Pennsylvania, 1 is in Camden, New Jersey, 1 in Baltimore, Maryland, 1 in Wilmington, Delaware, and for two of the companies the record does not show whether or not they have substantial operations in the Philadelphia area. MacLaren, Tr. 2504-10

(484) The multiplicity of services, including payroll services, which PNB performs for the twenty-seven companies with $8,000,000 or larger lines of credit with PNB helps these customers to carry on their substantial operations in the Philadelphia area, and therefore these companies carry average deposit balances with PNB far in excess of what would be required as a compensating balance against a loan. MacLaren, Tr. 2518 Smith, Tr. 3937

c. PNB participations in loans beyond its lending limit

(485) When Pennsylvania Power & Light (PP&L) borrowed $27,000,000 in March, 1960, from nine banks, it invited certain Philadelphia banks to share in the loan; upon this invitation PNB loaned Oakes, Tr. 3741-3742

PP&L $850,000 as part of the $27,000,000 loan. This has been PP&L's largest loan from PNB.

McDowell, Tr. 3020–3024
Ex. G–200, p. 6
Ex. G–245, pp. 72

(486) All of the customers identified on Exhibit D–26 are national customers in that they do business on a national scale, and all of them have banking connections in many different areas of the country. For example, #24 on Exhibit D–26 (which is I on Exhibit D–40) uses around 600 banks in all parts of the country. Thus, it is clear that such customers do not expect or desire to satisfy all their banking needs from just one bank or even a few banks.

Halpin, Tr. 755–56
Ex. G–67

(487) In a number of cases PNB has participated with other banks under a written agreement making loans which in total exceed PNB's lending limit or even the lending limit of any bank as well as loans which are well within PNB's limit. The interest rates on these loans vary.

d. Girard's larger loans and lines of credit

Brown, Tr. 3818

(488) The president of Girard could recall no occasion in the past ten years in which his bank had to refuse a request for a loan because it was in excess of Girard's lending limit.

Brown, Tr. 3843

(489) When the customer who is identified by the letter "G" on Exhibit D–40 requested a line of credit of $7 million, $1 million in excess of Girard's legal lending limit the president of Girard met that re-

quest by arranging with another commercial bank for the additional credit needed.

(490) On only one occasion since January 1, 1956, has Girard been asked to make a loan or extend a line of credit in excess of its lending limit. Ex. G-199

(491) On at least one occasion Girard was asked by a transmission company to arrange a $6 million line of credit with various banks the company did business with. Brown, Tr. 2735

(492) In addition to making loans to the customers listed on Exhibit D-40, Girard provides other services including payroll and corporate trust services for many of those customers. Brown, Tr. 2833-2835, 2844

(493) All twenty-seven of the customers of Girard listed on Exhibit D-40 as holding the largest line of credit from the Girard, with the possible exceptions of customers "G" and "Z", either have their main office in the Philadelphia area or maintain substantial operations in that area. Brown, Tr. 2830-33

e. Girard participations in loans beyond its lending limit

(494) Girard was the lead bank in a $12,000,000 loan dated May 18, 1955, to PP&L shared by ten banks (four in New York City, one in Pittsburgh, and five in Philadelphia including PNB) because it had been the principal banker for Pennsyl- Oakes, Tr. 3719-3720 Brown, Tr. 2735-36

vania Water & Power Company which merged with the PP&L and this loan arose out of that merger transaction.

Brown, Tr. 2647–60 Ex. G–69

(495) Of the 16 instances selected at random from Girard records of loans in which the Girard participated with other banks, eight of the participations were with one or more other Philadelphia banks.

2. The proposed lending-limit and the needs of large borrowers

a. Analysis of borrowing requirements of large companies

Carter, Tr. 3260

(496) The vast majority of bank customers would be served just as well by a $10 million bank as by a $10 billion bank; convenience and quality of service are more important factors than the size of the bank.

Ex. G–87, p. 38 Ex. D–25 MacLaren, Tr. 2263 Ex. D–24

(497) The merger itself would not increase the aggregate lending limit of all Philadelphia banks. If the merger is approved, defendants propose to raise the lending limit by $1,000,000 by the sale of 98 7/16 new shares and the transfer of funds from undivided profits. This would increase the aggregate lending limit of all Philadelphia banks by 2.55 per cent.

Horan, Tr. 3174, 3190–3191, 3199

(498) In the opinion of the chairman of the Broad Street Trust Company, ninety per cent of the businesses in the United States, and in Philadelphia, could be accommodated by a bank the size of the Broad Street Company, which has a limit of $1,200,000.

(499) The lending limit of Central Penn is $2,139,000, and this limit has been adequate to accommodate customers except on occasions. Sienkiewicz, Tr. 2052

(500) Both Girard and PNB offered to acquire the Ambler National Bank during the year 1955, but each offer was rejected because the officials of the Ambler National Bank felt that their bank was doing a good job for its community and its customers. Reller, Tr. 3134–3135

(501) The Philadelphia Industrial Development Corporation has not detected any detrimental effect on the economy of the Philadelphia area caused by the absence of a bank in Philadelphia as large as PNB and Girard combined. Graves, Tr. 3893

(502) The president of Girard knows of no business which would move to Philadelphia if the city had a larger bank or which would not consider moving to Philadelphia because of the present limitations of Philadelphia banks. Brown, Tr. 3796–3797

(503) The expansion or growth of the Sun Oil Company has not been hindered by the lending limit of any Philadelphia bank. Wilson, Tr. 3662

(504) Bankers Securities Corporation's outstanding loans, as of May 1961, from the following Philadelphia banks were all well within the lending limit of each bank: PNB, Girard, Provident Tradesmens, and Amsterdam, Tr. 3638–3639 Ex. G–255, p 2

the First Pennsylvania Banking & Trust Co.

Merriwether, Tr. 3561, 3590

(505) The unusual and rapid growth of Rohm & Haas Company, which multiplied itself ten times in size between 1939 and 1958, has not been adversely affected by the lending limits of the Philadelphia banks.

Merriwether, Tr. 3572, 3587–3590 Ex. G–252 Ex. G–253

(506) Rohm & Haas Company has not borrowed from New York commercial banks for twenty years. Rohm & Haas Company presently has a total credit line from five Philadelphia banks of $20 million, including credit lines of $8 million and $5 million from PNB and Girard respectively; the highest total loan from these five banks was $4.8 million in 1958 and the highest loan from one bank (PNB) was $1,875,000. Rohm & Haas Company has had no bank loans since September 1958.

Merriwether, Tr. 3592–3593 Ex. G–252 Ex. G–253

(507) During the period 1956 to 1960, Rohm & Haas Company's borrowing requirements from commercial banks have been adequately met by the Philadelphia banks, and at the present time its $20 million total lines of credit with five Philadelphia banks is more than ample to cover the maximum bank loan Rohm & Haas has had.

Merriwether, Tr. 3581

(508) Rohm & Haas Company expects to finance its proposed future construction programs out of cash on hand and future earnings.

(509) Of the twenty-seven customers listed on exhibit D–26 as having a line of credit of $8 million or more with PNB, nine are also among the twenty-seven customers holding the largest lines of credit from Girard as given on exhibit D–40. Brown, Tr. 2844–45

(510) The senior vice president of the Republic National Bank of Dallas knows of no company borrower for which an $8 million lending limit is inadequate but for which a $15 million lending limit is adequate. Jennings, Tr. 3387–3388

(511) The number of the existing or potentional customers of the Philadelphia National Bank that might require a lending limit in excess of $8 million would be a very small percentage of its total number of borrowers. Jennings, Tr. 3388

(512) PP&L's bank loans on December 31, 1960, totaled $35,000,000 and the original amounts of these loans were held by Chase Manhattan Bank ($15,000,000), Mellon National Bank & Trust Company ($15,000,000), Irving Trust Company ($2,500,000), and Girard Trust Corn Exchange Bank ($2,500,000). Ex. G–246

(513) PP&L foresees no bank loans for its construction program in the 1961–1965 period. Ex. G–247, p. 7

(514) The five largest banks in Philadelphia have a combined lending limit of about $30,000,000, yet PP&L's largest total Oakes, Tr. 3742–3745; Ex. G–246

borro..ings at any one time in recent years from Philadelphia banks were $7,500,000, even though all the major Philadelphia banks regularly solicit the company for business.

Oakes, Tr. 3745

(515) At any one time in recent years there would have been available to PP&L from the five largest Philadelphia banks additional lending capacity of $22,500,000.

Amsterdam, Tr. 3634

(516) Out-of-town banks which contact Bankers Securities Corporation in Philadelphia do so because they are located in communities in which Bankers Securities Corporation also has a store or one of its other enterprises and the banks in those communities communicate either about a specific problem or business opportunity in their own areas.

Harris, Tr. 2428

(517) From his years as a director of a Philadelphia bank and as a member of the Pennsylvania State Banking Board, Professor W. Carlton Harris had no knowledge of any industry which decided not to locate a plant in Philadelphia because it claimed any Philadelphia bank had an inadequate lending limit.

Brown, Tr. 2720–21

(518) PNB and Girard, if merged in one institution, will not be able to encourage businessmen to establish plants in Philadelphia because of its increased lending limit.

(519) Central-Penn's president did not know of any business which has not come to Philadelphia nor of any business which has come to Philadelphia because of the lending limits of banks in Philadelphia. Sienkiewicz, Tr. 2053–2054

b. *Participations are common*

(520) It is quite common for commercial banks to make loans in excess of their lending limit by participating with other banks, usually correspondent banks. This normally has no adverse effect on the bank-customer relationship. Forlines, Tr. 402; Sienkiewicz, Tr. 2053; Mason, Tr. 3073–74; McDowell, Tr. 3020

(521) Liberty Real Estate Bank & Trust Co. has never been turned down by the Philadelphia National Bank on a loan participation which it has requested. Mason, Tr. 3080–3083

(522) The Industrial Trust Company has participated in many loans with other banks, including New York banks, and has had a successful experience in such participations. Weinrott, Tr. 3103

(523) Where over $2 million has been sought by a borrower, Central-Penn has arranged a participation and this is a common practice among banks in such circumstances. Sienkiewicz, Tr. 2062–63

(524) Philadelphia National Bank offered to other banks in 1959 participations in 115 loans, none of which was in excess of Philadelphia National's lending limit. Tr. 3015

(525) PP&L would not like to arrange loans with a small number of banks nor Oakes, Tr. 3717–3718

would it want to deal with too many banks on a loan; the company prefers to have a good representation from the banks with which it normally deals.

Carter, Tr. 3240–3242

(526) In arranging a participation loan for $75 million, shared by 30 to 35 banks, the Radio Corporation of America allocated portions of that loan to banks as follows: (1) banks which served the company's various manufacturing locations were invited to participate; (2) some banks with long-standing relationships, such as the First Camden National Bank, were offered the full amount of their lending limit; (3) large banks were allocated an arbitrary amount, generally below their legal lending limit. In this allocation by RCA, the amount allocated to an individual bank was not necessarily proportioned to the lending limit or size of the bank.

Carter, Tr. 3240–3242

(527) A large corporation does not necessarily allocate shares of a loan according to the lending limits of large banks, but takes into account as one element the lending limit of the banks participating in the loan.

Potts, Tr. 1460

(528) The most important benefit of the proposed merger to the two banks involved is increased prestige.

Potts, Tr. 1403–1405

(529) In 1954, a group of eight Philadelphia banks, including PNB, First Pennsylvania Company, Girard, Fidelity-

Philadelphia Trust Company, and Provident Trust Company—formed a pool to help finance improvements in the City of Philadelphia, primarily in the Penn Center development. The combined lending limit available from the pool was approximately $22 million; several loans were made from this pool to various construction groups.

(530) Frankford Trust Company does a $45,000,000 business in construction loans, and many of its construction loans run more than $1,000,000. Its lending limit is $330,000. The only way in which it can provide the amount of the loan above its lending limit is to ask other banks to participate. Twist. Tr. 3545–3547

(531) In the past ten or twelve years Frankford Trust Company has been obtaining almost all of its construction loan funds through participations of PNB and Girard; only token participations are participated to a New York bank. Twist. Tr. 3547

(532) Of fifteen loan participations under written agreement selected at random from the records of PNB, seven involved participations by other Philadelphia banks. Girard was among the participants in six of those cases, and in three cases no fewer than four Philadelphia banks participated. Ex. G–67

(533) Of sixteen loan participations selected at random from the records of Ex. G–69

Girard, eight involved participations by one or more Philadelphia banks. PNB was among the participants in six of those cases, and in four of those cases only Philadelphia banks participated.

3. The effect of larger lines of credit on the availability of lendable funds in the four-county area

Smith, Tr. 573–74
Potts, Tr. 1408–09A
Brown, Tr. 2720–21
Harris, Tr. 2811
MacMillen, Tr. 1243, 1245

(534) The local availability of banking facilities is not an important factor in the decisions of industry to establish operations in a particular area. Factors which are important in industrial location include: transportation cost for raw materials and for shipments to markets, proximity to an industrial complex within which the particular industry can operate, cost and availability of labor, and similar factors.

Smith, Tr. 576, 578

(535) Neither of the two published surveys which have been made of the factors actually considered by businessmen in deciding to establish operations in a particular area even mention the availability or non-availability of banking facilities in that area.

Graves, Tr. 3900

(536) In those instances in which industrial concerns have shifted their operations from Philadelphia, they have moved to new markets in areas where the economy is growing more rapidly.

Graves, Tr. 3899

(537) Business which leaves Philadelphia generally moves to the South, the areas of the Middle West not yet fully de-

veloped, or the Far West. None has moved to the New York area.

(538) The slow growth of bank deposits in Philadelphia as contrasted with the average growth for the United States is unrelated to the lending activities of Philadelphia banks. Rather, the reason for this slow growth lies in the fact that economic activities generally in older and settled parts of the country are growing less rapidly than in the newer areas of the South and West. For this reason bank deposits in New York as well as Boston have also been growing more slowly than the national average. Harris, Tr. 2874–75 Smith Tr. 3954–59

(539) The proportion of loans made by Philadelphia banks to customers outside the local area is among the six highest for the United States. This fact probably explains to some degree the relatively slow growth of bank deposits in the four-county area. Relatively slow growth in deposits is also true of several financial centers other than Philadelphia, including New York City. Smith, Tr. 618

(540) The Pennsylvania Power & Light Company expects that as its business grows and its deposits in Philadelphia banks grow, the Philadelphia banks would thereby be entitled to a greater proportion of the total borrowing the company may do; but this is a normal result of the expected Oakes, Tr. 3718

growth of the Pennsylvania Power & Light Co.

Oakes Tr. 3767–3768; G–247, p. 15

(541) Of the $140 million planned for construction of new plants or facilities in the next five years by PP&L, none will be spent in the counties of Philadelphia, Delaware, Montgomery or Bucks; the company does not operate in any of these four counties.

Brown, Tr. 3810

(542) Girard normally requires that borrowers maintain 20 percent of their loan as a deposit with the Girard.

Potts, Tr. 1442–44
Goodman, Tr. 1778
MacLaren, Tr. 2265
Smith, Tr. 613–14
Clarke, Tr. 387–8, 390

(543) Commercial banks seek to obtain from a commercial borrower a deposit of 10% of a line of credit and 20% of a loan, but are not always successful in obtaining such a deposit.

Oakes, Tr. 3735–3737, Ex. G–246

(544) PP&L does not have any formal line of credit with any bank, although banks volunteer lines of credit to PP&L, just as they do to other potential customers; such lines of credit do not, however, result in the creation of any deposits.

Brown, Tr. 2840

(545) Approximately 50% of the commercial lines of credit extended by Girard are offered by the bank itself without any request having been made by the holder of the line.

Brown, Tr. 2844

(546) Some of the lines of credit extended by commercial banks such as PNB are "complimentary" lines rather than genuine "lending" lines of credit.

(547) It is quite doubtful that expansion of the lending limit of a Philadelphia bank would induce very many corporations to open lines of credit in Philadelphia and it is even more doubtful whether they would increase their deposits in the Philadelphia bank. Smith, Tr 581

(548) As of September 21, 1960, the loans outstanding from PNB to holders of formal lines of credit of $50,000 and over were 34.6% of the sum of those lines of credit. Smith, Tr. 3932

(549) If a commercial bank, by obtaining a larger lending limit, reorients its lending activities toward the national credit market or the regional credit market and away from the local area, the supply of credit in the local area would be somewhat smaller and interest rates would therefore tend to go up. Smith, Tr. 615

(550) As a result of the expansion of the lending limit of PNB and Girard and the opening of additional lines of credit due to that expansion, the supply of credit available in Philadelphia will be somewhat reduced rather than expanded and interest rates in Philadelphia, particularly for small local borrowers, will tend to rise. Smith, Tr. 616, 638

(551) The essence of the testimony of Professor Warren L. Smith regarding the net effect on the availability of credit for Philadelphia borrowers to be expected Smith, Tr. 616-17

from the proposed merger is that if the additional deposits attracted to Philadelphia banks to support expanded lines of credit do not exceed the loans made under those lines and spent outside the Philadelphia area, the Philadelphia area is bound to suffer a reduction in the funds available for local borrowers.

Smith, Tr. Ex. G-60 3932

(552) Assuming that customers who would obtain additional lines of credit from the merged bank would borrow on the average 35 percent of the amount of those increased lines and would maintain deposits of 10 percent of the new lines, the net supply of funds available to Philadelphia borrowers would be reduced by approximately 27 percent of the increased lines of credit.

Smith, Tr. 3969

(553) The net effect of increasing the lines of credit offered by Philadelphia banks on the availability of bank credit in Philadelphia is unaffected by the fact that banks in other parts of the country are constantly making loans which to some extent result in additions to Philadelphia bank deposits. This is so because this process occurs irrespective of the amount of the credit lines Philadelphia banks offer.

Smith, Tr. 3935

(554) The customers of PNB listed on Exhibit D-26 and the customers of Girard listed on Exhibit D-40 made relatively slight use of their credit lines with defend-

ants in 1960, and their decisions to maintain banking connections and deposits with the defendants were not importantly related to any need of theirs to increase lines of credit.

(555) In fact the ratio of their deposits to their loans and lines of credit far exceeded the average deposits in connection with loans and lines which the presidents of both defendants testified might be expected. Smith, Tr. 3936

(556) If the customers listed on Exhibits D–26 and D–40 were interested in increasing their credit lines and were not receiving from defendants local services that could not adequately be provided by banks outside of Philadelphia, they would transfer their banking connections to New York or other centers having banks in which their deposits would support larger lines of credit. Smith, Tr. 3936

(557) It is most unlikely that the merged bank would be able, as a result of increasing lines of credit to them, to attract additional customers whose deposits and loans would follow the pattern of the customers listed on Exhibits D–26 and D–40. Such additional customers would more probably maintain lower deposits and make more intensive use of the lines of credit made available by reason of those deposits. Smith, Tr. 3937, 3961–62

Andrews, Tr. 3609, 3614–15

(558) Triangle Publications has not transferred and will not transfer its various service accounts from other banks to its borrowing bank or banks, because it maintains these accounts in areas in which it has local operations. Thus, any increased use of the larger lending limit of the proposed merged bank would not bring along additional deposits of Triangle Publications in excess of those maintained because of the lending relationship.

McDowell, Tr. 2854–2878; 2862–2863

(559) The customers listed on Exhibit D–26 are generally infrequent users of PNB's lending capacity, and the operating services performed by the bank in connection with the local business activities conducted by the customers in and around Philadelphia County have a more direct effect on the size of deposits carried by these customers with PNB than does the grant of a line of credit or the actual borrowing relationship between the customers and the bank.

Smith, Tr. 3966, 3972

(560) Assuming that whatever additional customers PNB and Girard combined might attract through an increased lending limit would maintain the highly favorable proportion of deposits to loans and lines of credit which the customers on Exhibit D–26 have, the net increase in the availability of bank credit resulting from additional lines of credit would still be

only about 15 percent of the amount of those lines.

4. If the merged bank's increased lending limit does give it greater ability to compete with larger banks, it will necessarily give it a competitive advantage over other Philadelphia banks.

(561) An increase in lending limit from $8 million to $14 million or $15 million would give the proposed merged bank a competitive advantage over First Pennsylvania Banking & Trust Company, the next largest Philadelphia bank competitor after the merger. Potts, Tr. 1456

(562) Liberty Real Estate Bank & Trust Company has on occasion lost loan business to PNB when Liberty Real Estate Bank did not choose to extend further credit to a customer. Mason, Tr. 3072–73

(563) According to the president of PNB, that bank does compete with other Philadelphia banks but does not attempt to take away a depositor or a borrower from one of these banks by use of its larger lending limit. Potts, Tr. 1453

(564) The higher lending limit of the proposed merged bank would be an important factor in that bank's efforts to attract the business of national customers away from other Philadelphia banks and the future management of the proposed merged bank intends to use this tool to bring such customers to the new bank. McDowell, Tr. 3028

McDowell, Tr. 3032–3033

(565) The senior lending officer and executive vice president of PNB expects the proposed merged bank to experience greater difficulty in attracting national customer business away from a Philadelphia bank wih a $7 million lending limit than it will in attracting business away from a bank elsewhere with a $20 million lending limit; if there has been a long-time *relation*ship between another Philadelphia bank and a national customer, he doubts that such a customer would change to the new bank for its banking business in Philadelphia because of the increased lending limit in one Philadelphia bank.

(566) Thus, while the lower lending limit of the individual defendant banks, as compared to certain banks in other cities, is claimed to cause loss of national customer business in Philadelphia to banks outside of Philadelphia, it is the position of defendants' officials that the lower lending limit of the remaining Philadelphia banks, as compared to the lending limit of the proposed bank, will not cause a loss of national customer business from the remaining Philadelphia banks to the new bank.

5. Bank lending limits can be increased without merger

Potts, Tr. 1430–1432, 1435

(567) There are several ways in which a bank can increase its lending limit other

than by merging with another bank, including the issuance of additional stock, and by transfers from undivided profits to surplus.

(568) Since the end of World War II, the Republic National Bank of Dallas has on at least ten different occasions gone to the market and sold new common stock as a means of increasing its capital and its lending limit. The amount of the new capital raised thereby was between $20 million and $25 million. By this method alone, Republic National Bank increased its lending limit between $2 million and $2.5 million. Jennings, Tr. 3442-3443

(569) In ten years The Bank of Granite in Lenoir, North Carolina, has increased its lending limit from $12,000 to $90,000 by selling new common stock. Forlines, Tr. 428

(570) In 1951 Girard increased its lending limit by $450,000 through the sale of new stock. Brown, Tr. 3799-3800

(571) In 1960 Girard increased its lending limit by $500,000 through transfer of $5,000,000 from undivided profits to surplus. Ex. D-33, p. 5

(572) There are positive benefits to be derived from increasing a bank's lending limit by means other than merger. The result is a net increase in an area's composite lending limit rather than a mere combination of existing limits as occurs in

a merger. Increase through sale of stock or transfers to surplus brings new capital into the commercial banking system without elimination of an existing competitor. At the same time the financial structure of the enlarged bank is strengthened and greater security is afforded depositors whose money is being loaned.

6. Competition in Philadelphia from banks in New York and elsewhere

a. Amount of business done in Philadelphia by New York banks

Potts, Tr. 1514
Ex. D–1, p. 65
Ex. D–20
Ex. D–24
G–57, pp. 129–131
Dilworth, Tr. 3912

(573) A study by the Federal Reserve Bank of New York, based on material submitted by banks to the Federal Reserve Board in October, 1955, showed that New York City banks had loans outstanding to borrowers in the city of Philadelphia of $113,000,000 as of October 5, 1955. The same study showed the following amounts of loans outstanding to borrowers in other cities. Also shown below are the sizes of banks and lending limits in those cities.

City	Amount of loans to borrowers by New York City banks	Total asset size of largest bank in city	Largest lending limit of any bank in city
Chicago	$375,000,000	$3,000,000,000	$27,500,000
Houston	375,000,000	n.a.	n.a.
Los Angeles	218,000,000	11,000,000,000	55,000,000
Detroit	138,000,000	2,000,000,000	14,000,000
Dallas	125,000,000	n.a.	10,500,000
Philadelphia	113,000,000	1,300,000,000	8,000,000
Baltimore	98,000,000	620,000,000	2,400,000
Minneapolis	97,000,000	n.a.	n.a.
San Francisco	93,000,000	11,000,000,000	55,000,000
St. Louis	89,000,000	663,000,000	4,900,000

(574) New York banks lend more to businesses in Chicago, Houston, Detroit, Dallas and Los Angeles than they do in Philadelphia although all of those cities except perhaps Houston have banks larger than any bank in Philadelphia. Thus, it is clear that there is no relationship between the asset size of the largest bank in a city or the largest lending limit of any bank in a city and the amount of loans which may be made by New York City banks to borrowers in that city.

(575) The combination of all the Philadelphia banks would not create a bank as large as several leading New York banks. Ex. D-24

(576) Potential borrowers from commercial banks who desire loans for under $1 million would not normally obtain their loans from banks in another city. Brown, Tr 3817

(577) Central-Penn National Bank has not lost deposit accounts to New York, Boston, Chicago, San Francisco or Los Angeles banks. Sienkiewicz, Tr 2071

(578) Central-Penn National Bank has not lost any loans to New York banks. Sienkiewicz, Tr 2072

(579) The experience of Frankford Trust in participating its construction loans, which may run into several million dollars, shows that PNB and Girard have given quick service in contrast to the week to ten days required by New York banks, that they have never cut off Frankford in Twist, Tr 3547 3550

times of tight money as the New York banks had done, they have met all the dollar requirements of Frankford, that Frankford Trust has had satisfactory experience with The Philadelphia National Bank and Girard Trust Corn Exchange. There is no need on the part of Frankford Trust to return to New York for its construction loan participations.

b. Historical character of banking affiliations

MacMillen, Tr. 1241-42

(580) An increase in the lending limit of a Philadelphia bank would not enable that bank to compete more effectively for the domestic and foreign business done by New York banks.

Potts, Tr. 1451, 1483

(581) Relationships between a bank and its depositors, whether they are borrowers or not, are generally of rather long standing and depositors and banks alike cherish this relationship; depositors are loathe to change their accounts and as a rule change their bank only for cause.

Oakes, Tr. 3769-3770

(582) From the point of view of the PP&L, even if the proposed merger is consummated, it would not be good business for the company to give up its relationship with the Chase Manhattan Bank.

Oakes, Tr. 3764-3766A

(583) While the PP&L expects that in time its borrowings and its deposits in the Philadelphia area banks will increase, it cannot as a matter of good business judgment cut off its other banking connections.

(584) While PP&L announced in 1946 a policy of doing as much business as possible with companies in Pennsylvania, including Pennsylvania banks, it has not changed its historical banking relationship to any extent. Up to the present time the largest loan PP&L has had with PNB was $850,000. Oakes, Tr. 3700–3701, 3750–3752; Ex. G-246

(585) Although PP&L has had a banking relationship with Girard since 1920, the largest amount it has borrowed from Girard has been $2,500,000. Oakes, Tr. 3696, 3753

(586) Bankers Securities Corporation plans to continue its close relationship with First National Bank of Boston regardless of the proposed merger of PNB and Girard. Amsterdam, Tr. 3687

(587) Of six oil companies which have major refineries in the Philadelphia area, one has its major banking affiliation with Chase Manhattan Bank and PNB, another has its major banking affiliation with a New York bank, another has its major banking affiliation with Mellon National Bank, Pittsburgh, and the remaining three companies have their major banking affiliations with New York banks. There is no basis for concluding that if the proposed merger should be approved, the Mellon group, Socony Mobil, Sinclair or Tidewater would move their main service banking affiliation to Philadelphia. Potts, Tr. 1436–37 Ex. G-57, p. 8

Potts, Tr. 1439–40, 1445, 1454

(588) All of the 26 corporations listed in Exhibit G–125 have long standing banking affiliations, either with other Philadelphia banks or with other banks in other cities.

7. Any improvement in defendants' management as a result of the merger would impose a competitive disadvantage on other Philadelphia banks

Potts, Tr. 1359–60

(589) Both PNB and Girard have excellent management, and the decision to merge the two banks was not in any way attributable to any problem or inadequacy of the existing management of either bank.

Horan, Tr. 3220–22

(590) Defendants called as witnesses executive officers of six Philadelphia commercial banks, all of which are smaller than either defendant. All of these men are thoroughly competent in their field and none indicated the smaller size of their bank was any obstacle in rendering business advice. One stated that smaller borrowers find it more difficult to communicate with their banker as the bank becomes larger.

(591) The quality of the management of a commercial bank does not depend on size.

Potts, Tr. 1459–60

(592) At the present time, there is no difference between the ability of the largest bank in Philadelphia, the First Pennsylvania Banking & Trust Co., and PNB to attract qualified specialists and personnel.

(593) PNB and Girard do not need to merge in order to retain and attract quality and depth in management, or to develop more highly trained specialists any more than do the other Philadelphia banks, which are of sufficient size and profitability to fit higher costs of this nature into their operations. Potts, Tr. 1458–1460

(594) PNB and Girard will have an advantage over their competitors in supplying the banking needs of small business should this merger be approved. This will be so because the enlarged bank will be in a better position to supply skilled personnel to advise small business. Harris, Tr. 2464

8. Foreign department activities

(595) For foreign borrowers, the historical relation between borrower and lender is the most important consideration and the quality of service offered over a long period is the second most important factor influencing the borrower to continue borrowing relationships of many years' standing with New York banks, both large and small. MacMillen, Tr. 1242

(596) Foreign exporters and foreign importers think of New York City as the principal financial center, which it is. Potts, Tr. 1426

Merriwether, Tr. 3565-3566, 3569

(597) The proposed merger will not materially assist in the financing of foreign subsidiaries of Philadelphia companies. For instance, Rohm & Haas Company follows a policy of financing foreign subsidiaries through banks located in the countries in which its subsidiaries operate.

Potts, Tr. 1374-76

(598) PNB has the largest and Girard has the second largest of the foreign departments of Philadelphia banks. The third largest foreign department in Philadelphia, Provident Tradesmens Bank and Trust Company, is much smaller than either of the first two.

(599) Any improvement in the resulting bank's foreign department from the proposed merger would not materially improve its competitive position in relation to New York, but would make it much more difficult for the few remaining foreign departments in Philadelphia banks to compete for customers.

(600) Thus to the extent that size is a factor in competing for foreign banking business, the resulting bank's dominance over other Philadelphia commercial banks in soliciting business connected with the Port of Philadelphia as well as other foreign business might give it a decisive competitive advantage in obtaining this important custom.

X. CONCLUSIONS OF LAW

This Court has jurisdiction to determine the pending cause.

The merger of the defendant banks would involve the acquisition of stock or other share capital within the contemplation of section 7 of the Clayton Act.

The proposed merger of the defendant banks is a combination within the contemplation of section 1 of the Sherman Act.

Commercial banking is a part of trade or commerce within the contemplation of section 1 of the Sherman Act.

Commercial banking is a line of commerce within the contemplation of section 7 of the Clayton Act.

Commercial and industrial loans are a part of trade or commerce within the contemplation of section 1 of the Sherman Act.

Commercial and industrial loans are a line of commerce within the contemplation of section 7 of the Clayton Act.

Installment lending to individuals by commercial banks is a part of trade or commerce within the contemplation of section 1 of the Sherman Act.

Installment lending to individuals by commercial banks is a line of commerce within the contemplation of section 7 of the Clayton Act.

Single payment loans to individuals are a part of trade or commerce within the contemplation of section 1 of the Sherman Act.

Single payment loans to individuals are a line of commerce within the contemplation of section 7 of the Clayton Act.

Real estate loans by commercial banks are a part of trade or commerce within the contemplation of section 1 of the Sherman Act.

Real estate loans by commercial banks are a line of commerce within the contemplation of section 7 of the Clayton Act.

Personal trust services are a part of trade or commerce within the contemplation of section 1 of the Sherman Act.

Personal trust services are a line of commerce within the contemplation of section 7 of the Clayton Act.

Time deposits of partnerships and corporations are a part of trade or commerce within the contemplation of section 1 of the Sherman Act.

Time deposits of partnerships and corporations are a line of commerce within the contemplation of section 7 of the Clayton Act.

Time and savings deposits are a part of trade or commerce within the contemplation of section 1 of the Sherman Act.

Time and savings deposits are a line of commerce within the contemplation of section 7 of the Clayton Act.

Demand deposits are a part of trade or commerce within the contemplation of section 1 of the Sherman Act.

Demand deposits are a line of commerce within the contemplation of section 7 of the Clayton Act.

IPC demand deposits are a part of trade or commerce within the contemplation of section 1 of the Sherman Act.

IPC demand deposits are a line of commerce within the contemplation of section 7 of the Clayton Act.

The four-county area of Philadelphia, Bucks, Montgomery, and Delaware Counties is the relevant market area within which to measure the competitive effects of this merger.

The four-county area of Philadelphia, Bucks, Montgomery, and Delaware counties is a section of the country within the contemplation of section 7 of the Clayton Act.

The combination of PNB and Girard will result in a restraint of trade or commerce in commercial banking in the four-county area in violation of section 1 of the Sherman Act.

The proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in commercial banking in the four-county area in violation of section 7 of the Clayton Act.

The combination of PNB and Girard will result in a restraint of trade or commerce in commercial and industrial loans in the four-county area in violation of section 1 of the Sherman Act.

The proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in commercial and industrial loans in the four-county area in violation of section 7 of the Clayton Act.

The combination of PNB and Girard will result in a restraint of trade or commerce in installment lending to individuals by commercial banks in violation of section 1 of the Sherman Act.

The proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in installment lending to individuals by commercial banks in violation of section 7 of the Clayton Act.

The combination of PNB and Girard will result in a restraint of trade or commerce in single payment loans to individuals in violation of section 1 of the Sherman Act.

The proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in single payment loans to individuals in violation of section 7 of the Clayton Act.

The combination of PNB and Girard will result in a restraint of trade or commerce in real estate loans by commercial banks in the four-county area in violation of section 1 of the Sherman Act.

The proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in real estate loans by commercial banks in the four-county area in violation of section 7 of the Clayton Act.

The combination of PNB and Girard will result in a restraint of trade or commerce in personal trust services in the four-county area in violation of section 1 of the Sherman Act.

The proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in personal trust services in the four-county area in violation of section 7 of the Clayton Act.

The combination of PNB and Girard will result in a restraint of trade or commerce in time deposits of partnerships and corporations in the four-county area in violation of section 1 of the Sherman Act.

The proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in time deposits of partnerships and corporations in the four-county area in violation of section 7 of the Clayton Act.

The combination of PNB and Girard will result in a restraint of trade or commerce in time and savings deposits in the four-county area in violation of section 1 of the Sherman Act.

The proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in time and savings deposits in the four-county area in violation of section 7 of the Clayton Act.

The combination of PNB and Girard will result in a restraint of trade or commerce in demand deposits in the four-county area in violation of section 1 of the Sherman Act.

The proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in demand deposits in the four-county area in violation of section 7 of the Clayton Act.

The combination of PNB and Girard will result in a restraint of trade or commerce in IPC demand deposits in the four-county area in violation of section 1 of the Sherman Act.

The proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in IPC demand deposits in the four-county area in violation of section 7 of the Clayton Act.

The combination of PNB and Girard violates section 1 of the Sherman Act.

The proposed merger of PNB and Girard would violate section 7 of the Clayton Act.

CONCLUSION

It is respectfully requested that the Court adopt the above proposed Findings of Fact and Conclusions of Law.

GEORGE D. REYCRAFT,
JAMES A. REED,
JOHN M. O'DONNELL,
P. JAY FLOCKEN,
CHARLES A. DEGNAN,

Requested Conclusions of Law 3518

[fol. 6816] Requested Findings of Fact

I. The Background of This Proceeding

1. This action was filed on February 25, 1961 to enjoin the proposed merger of The Philadelphia National Bank and Girard Trust Corn Exchange Bank, hereinafter referred to as PNB and Girard respectively. The Complaint was filed under Section 4 of the Sherman Act (15 U.S.C. § 4) and Section 15 of the Clayton Act (15 U.S.C. § 25) for injunctive relief against alleged violations of Section 1 of the Sherman Act (15 U.S.C. § 1) and Section 7 of the Clayton Act (15 U.S.C. § 18) respectively.

2. PNB is a national bank chartered on October 20, 1864 under an Act of Congress approved June 3, 1864. Girard is a state bank chartered on March 17, 1836 by Act number 128 of the Pennsylvania Legislature. (Ex. G-57, pp. 16, 22)

3. On November 15, 1960 the Boards of Directors of PNB and Girard approved a proposed merger of the two banks, and on December 20, 1960 the two Boards approved a written Agreement of Consolidation to be effected in accordance with the provisions of the national banking statutes, 12 U.S.C. § 215. (Ex. G-117, G-118, G-119, G-128, G-129)

[fol. 6817] 4. On November 15, 1960, PNB and Girard filed an Application with the Comptroller of the Currency for approval of the proposed merger under the Bank Merger Act of May 13, 1960, 12 U.S.C. § 1828(c). (Ex. G-57; Potts, 1388; Brown, 3784)

5. As required by the Bank Merger Act the Comptroller requested and received from the Federal Reserve Board, the Federal Deposit Insurance Corporation and the Attorney General advisory reports on the competitive factors involved in the proposed merger. (Ex. G-161, G-162, G-163)

6. Following receipt of these reports, the Comptroller, on February 24, 1961, approved the proposed merger after giving consideration to each of the seven factors set forth in the Bank Merger Act; he concluded with respect to competition that the merger would be beneficial to international and national competition and would not be unfavorable to local competition because an adequate number of alternative sources of banking services would remain after the merger. (Ex. D-14, G-164)

7. On May 9, 1961, the meetings of the shareholders of

the respective banks were held and the Agreement of Consolidation duly approved. (Brown, 2796; Ex. D-59)

[fol. 6818] 8. In the consummation of the proposed merger neither PNB nor Girard will acquire the stock or share capital of the other. (Ex. G-119)

[fol. 6819] II. Nature of the Commercial Banking Business

9. By its nature, commercial banking is wholly different from industrial or commercial businesses. (Jennings, 3368-9; Clarke, 375; Brown, 2571-2)

10. Banks are subject to extensive regulation by law and by the Federal Reserve Board, the Comptroller of the Currency, the Federal Deposit Insurance Corporation and state banking authorities. (Brown, 2573; Harris, 2292-4; Jennings, 3304-13)

11. The principal purpose of the extensive government regulation of commercial banks which prohibits unrestricted competition is to protect their depositors. (Harris, 2292-4; Brown, 2571)

12. Governmental regulation of commercial banking has the effect of sharply limiting the scope and character of competition among commercial banks. (Jennings, 3307-9, 3312-3; Harris, 2292-2303)

13. Commercial banks are not permitted to pay interest on demand deposits. The maximum interest which commercial banks are permitted to pay on time and savings deposits is fixed by law. (Brown, 2574; Harris, 2288, 2294; Jennings, 3303)

14. Banks are restricted in the nature, amount, volume [fol. 6820] and purpose of loans they are permitted to make. All national banks and banks chartered in Pennsylvania and most other states are in general not permitted to have outstanding loans to any one customer in an amount in excess of 10% of their capital and surplus. (Harris, 2294-5, 2363-5; Brown, 2576, 2581-2, 2613)

15. The amount of money and credit in the banking system is directly affected by the reserve requirements, the rediscount rate and the open market practices of the Federal Reserve System. (Potts, 1518-9; Smith, 473-7; Brown, 2608-11, 2637-9; Harris, 2297)

16. Maximum interest rates on loans are fixed by law in Pennsylvania. (Harris, 2295, 2299; Brown, 2577)

17. Minimum interest rates on loans are directly affected by the reserve requirements and open market practices of the Federal Reserve Board, by the rediscount rate fixed by the Federal Reserve Banks, and by the "prime rate" established by the nation's largest banks for their customers with the highest credit standing. (Smith, 473-7; Potts, 1518-9; Harris, 2295-9; Brown, 2608-9, 2626-30; Jennings, 3302-3)

18. Neither PNB nor Girard has, nor would the merged bank have, any influence in connection with the matters [fol. 6821] covered by Requested Findings 15 and 17 above. (Brown, 2627-30, 2633-7; Harris, 2376-7; Mason, 3060-1; McDowell, 2937-8; Carter, 3243-4; Horan, 3190-1; Weinrott, 3105-7)

19. Entry into the banking business and the opening of branches are strictly regulated in order to protect existing banks from excessive competition, and are permitted only upon a showing that there is adequate banking business in the area to support both the existing banks and the proposed bank or branch. (Harris, 2293, 2301-3; Jennings, 3309; Beadle, 820-1, 972-3; Brown, 2625)

20. As a result of restrictions on entry there are thousands of communities in the United States with but one commercial bank. (Harris, 2300-3)

21. Girard and PNB may establish branches only in Philadelphia and the three Pennsylvania counties contiguous to it (Bucks, Delaware and Montgomery). (Beadle, 813-4)

22. Commercial banks are subject to regulation to insure that their investments are of high quality. (Brown, 2582; Jennings, 3308-9)

23. Banks are in practice subject to strict liquidity requirements which affect the type of assets a bank may hold [fol. 6822] and the investments it may make. (Brown, 3383-4; Jennings, 3305, 3308)

24. Sound banking practice establishes maximum safe ratios of a bank's total loans to its capital, its deposits and its assets. (Brown, 2613-4, 2806; Ex. D-29)

25. Banks are subject to inspection and control by banking examiners who make periodic and thorough examinations of their affairs to determine compliance with banking regulations, and who may require that changes be made

in the loan-asset or loan-deposit ratios or liquidity position of any bank that deviates substantially from accepted practices. (Jennings, 3305-8; Brown, 2582, 2615)

26. Reserve requirements, required ratios, liquidity requirements, investment limitations and other requirements have the effect of reducing banks' profit margins and severely limit a bank's ability to engage in price competition. (Jennings, 3304-8, 3311-12; Brown, 2617-9, 2640-1)

27. The largest part of a bank's earnings are derived from its deposits, without which it could not conduct its business. These deposits are received from the bank's customers and may be withdrawn by them at any time. (Brown, 2571-2, 2641-2; Harris, 2296; Jennings, 3366)

28. Price competition is at the most a minor factor in competition among commercial banks, and in most banking [fol. 6823] services does not exist. (MacMillen, 1261-2; Jennings, 3301-3)

29. Interest rates on loans generally fall between the maximum fixed by law and the prime rate. (Harris, 2299-2300, 2468; Brown, 2609; MacMillen, 1257-8).

30. Within the maximum and minimum rates fixed by law and the operation of the banking system, the interest rate which a bank charges depends primarily upon the borrower's credit standing. (Brown, 2609; Sienkiewicz, 2061; Jennings, 3361-2)

31. Commercial banks do not generally compete in the evaluation of credit standing in the making of loans; lending officers base credit evaluations on the same factors and their evaluations are generally similar. (Potts, 1521-2; Sienkiewicz, 2073-5)

32. Banks do not engage in significant interest rate competition; to do so would quickly exhaust a bank's lending capacity and cause it to become over-loaned. (Potts, 1518-19; Harris, 2299-2300; Satterfield, 2080; McMillen, 1261-2)

33. A bank cannot raise its interest rates above the going rates without losing borrowers to other banks. (Potts, 1518; Brown, 2629, 2631-2)

34. Price is of minor importance in competition among commercial banks for savings accounts. (Sienkiewicz, [fol. 6824] 2068; Horan, 3176-7; Harris, 2334; Brown, 2600-1; Ex. D-34).

35. Price competition for time deposits is a minor factor as between commercial banks within the same state because all commercial banks pay the maximum allowed by law. (Harris, 2330, 2341; Brown, 2596-7).

36. Service charges are a minor factor in competition. (Harris, 2312, 2316-7, 2321; Dubois, 726-8; Worstall, 1104-5; Sienkiewicz, 2057-9; Brown, 2780-8).

37. The principal factors in competition among commercial banks are convenience, quality of service, personal relationships, and the capacity to meet the requirements of the customer. (Clarke, 371; Dubois, 727-8; Beadle, 965, 974-6; Harris, 2292, 2312-3, 2317, 2321, 2325, 2344, 2349, 2351, 2357; Brown, 2646; Jennings, 3303-4; Gillam, 1313; Mason, 3059-60; Worstall, 1096, 1104-5; MacMillen, 1259-61).

38. Commercial banks do not compete in expanding credit; it is an incident of their lending function and a function of the whole banking system in conjunction with the Federal Reserve System. (Harris, 2288-9; Jennings, 3304).

39. Safety is no longer a factor in competition between small and large banks. Deposit insurance has enabled the [fol. 6825] smallest banks to compete with the largest in this respect. (Jennings, 3311-3)

40. Large commercial banks do not have a competitive advantage for business within the range of the resources of smaller banks. In that range, small banks are able to compete as effectively as large banks. (Weinrott, 3099; Horan, 3174-5; Carter, 3238-9; Harris, 2315; Sienkiewicz, 2063-4; MacLaren, 2526; Brown, 2766-8, 2795; Jennings, 3371)

41. The growth of a small bank is not adversely affected by the existence of a large competing bank; in most cases small banks grow faster than large banks, which find it difficult to maintain their positions relative to small banks. (Jennings, 3333-4, 3338-41; Forlines, 428-9; Dubois, 732; Harding, 1023; MacMillen, 1272-3; Taylor, 1306-7; Ex. D-18)

42. Large banks do not treat small businesses less favorably than do small banks; having greater resources, large banks are willing to take greater credit risks than small banks. (Harris, 2353-4; MacMillen, 1267-9; Mason, 3055-6, 3064; Graves, 3886-8; Jennings, 3359; Ex. D-3)

43. The ratio of loans to assets of a bank increases with its size. (Harris, 2371, 2418-9; Ex. D-29)

[fol. 6826] III. Commercial Banking Markets

A. Geographic Markets

44. Competition in commercial banking is comprised both of the active rivalry of commercial banks and other institutions seeking to sell their services, and of the existence of alternative sources of such services for the banks' customers. Both exist in competition for commercial banking services in Philadelphia and the Delaware Valley. (Harris, 2291-2)

45. Commercial banks sell their services in local, regional, national and international markets. These markets overlap and are difficult to define. (Smith, 545; Harris, 2304-5).

46. The customer's geographic market for banking services is determined by the location of the alternative sources from which he can obtain these services. (Harris, 2304-7)

47. The geographic location of the customers of PNB and Girard does not determine the geographic market in which customers of the bank may obtain banking services. (Harris, 2307-8; McDowell, 3042)

48. The fact that PNB and Girard branches are limited to the four-county area, consisting of Philadelphia, Bucks, [fol. 6827] Montgomery and Delaware Counties, does not limit either the geographic source of their business or the location of the alternatives available to their customers. (Harris, 2304).

49. Customers are not restricted by political boundaries in the choice of banks or other financial institutions. (MacLaren, 2228; Harris, 2352; McDowell, 2974-5).

50. PNB and Girard draw substantial business from customers located outside the four-county area in which they operate branches. PNB, Girard and other Philadelphia area banks derive substantial business from the entire ten-county Delaware Valley area, consisting of the above four counties and Chester County, Pennsylvania; Burlington, Camden, Gloucester and Mercer Counties, New Jersey; and New Castle County, Delaware. Much of the merging banks' business originates outside the ten-county area. (Potts, 1507-8; Satterfield, 2123-4, 2129; MacLaren, 2239; Weinrott, 3400-1; Ritter, 3142, 3162-3; Brown, 2764; Ex. D-30, D-43, D-60, D-61, D-64, D-65, D-66, D-67, D-68, D-69).

51. The four-county area has no better claim to be the primary geographic source of defendants' business than [fol. 6828] any of several other areas or combination of areas. For instance:

(a) Defendants, combined, derive a greater amount of their commercial and industrial loans from the northeast United States outside the Third Federal Reserve District than they do from Bucks, Delaware and Montgomery Counties. (Ex. D-63).

(b) Defendants grant a greater dollar amount of lines of credit to customers outside than to customers inside the four-county area: (Ex. D-68).

(c) Defendants draw less business time deposits from Bucks, Delaware and Montgomery Counties than from each of the following areas: the other six counties of the ten-county Delaware Valley area outside of Philadelphia, the rest of the Third Federal Reserve District outside Delaware Valley, and the northeast United States outside the Third Federal Reserve District. (Ex. D-61).

(d) PNB derives a smaller amount of all its business demand deposits from Bucks, Delaware and Montgomery Counties than it does from the northeast United States outside the Third Federal Reserve District. (Ex. D-60).

(e) Defendants make to customers outside the four-county area more than 80% of their loans (in dollar amount) [fol. 6829] to domestic banks, to foreign banks, to other financial institutions, and to purchase or carry securities, and more than 60% of their miscellaneous loans. (Ex. D-67).

52. In the areas from which PNB and Girard derive their business their customers have as active alternative choices not only other commercial banks in such areas but also commercial banks located outside such areas:

(a) Large banks from large cities throughout the country solicit business in the Philadelphia area on an intensive and regular basis. (Weinroft, 3101-2; McGinley, 3448, 3450; Oakes, 3709; Bradshaw, 3525-6; Amsterdam, 3634; Merriwether, 3582; Andrews, 3611-2; Wilson, 3661; Carter, 3229-30; Brown, 2754-7, 2819-20; McDowell, 2909-10; MacLaren, 2231; Sienkiewicz, 2063-4; MacMillen, 1247-9).

(b) The business solicited by New York and other banks includes loan, deposit and corporate trust services, correspondent bank business, personal trust and other business. (Brown, 3869; Carter, 3230-1; McGinley, 3449, 3452).

(c) Banks from New York and other cities derive sub-
[fol. 6830] stantial business from Philadelphia. (Potts, 1514-6; Jennings, 3429-30; Ex. D-1).

(d) In such fields as the financing of mobile homes, the financing of prefabricated houses, tuition financing, and real estate mortgages Philadelphia banks compete with banks and other institutions located in many areas outside the four counties. (Ritter, 3142, 3154-6; Harris, 2366-7).

(e) At least 68% in dollar volume of defendants' combined commercial and industrial loans are made to, and at least 64% in dollar volume of defendants' combined demand deposits from partnerships and corporations are received from, customers whose banking choices include commercial banks located outside the four-county area. (McDowell, 2926-8; Adams, 3470; Ex. D-43).

53. Taking into consideration both the location of PNB's and Girard's business and the location of the alternative choices available to their customers, the market area for every service offered by PNB or Girard other than savings deposits is larger than the four-county area, varying from the ten-county Delaware Valley area up to the entire United States or the world. (Harris, 2322, 2326, 2328, 2334, 2347; McDowell, 2918, 2925-37; Ex. D-30, D-41; D-60 through D-69 inclusive):

[fol. 6831] 54. Plaintiff has restricted its evidence bearing on defendants' portion of or influence in any market to the four-county area.

55. Plaintiff has introduced no evidence bearing on defendants' proportion of the entire banking business done within the four-county area by all banks with offices in that area, in any category of business.

56. Plaintiff has introduced no evidence bearing on defendants' proportion of the entire banking business done within the four-county area by all banks deriving business from that area, in any category of business.

57. Plaintiff has introduced no evidence bearing on defendants' proportion of the entire banking business done

in any selected area by all banks deriving business from that area, in any category of business.

[fol. 6832] B. Functional Markets: Competitive Alternatives

(1) Insurance Companies

58. Life insurance companies located throughout the United States are active competitors of commercial banks in the Philadelphia area in the fields of:

(a) attracting the savings dollar (Harris, 2340; McDowell, 2918);

(b) mortgage loans (Harris, 2365; Brown, 2707; McDowell, 2930); and

(c) single-payment loans to individuals (Harris, 2469-70).

59. Insurance companies are an alternative source of funds for large corporations, and some insurance companies are now engaging in loans to businesses of shorter terms and smaller amounts. (Harris, 2357; Brown, 2706-7, 3835-6)

60. The tendency is toward increasing competition between commercial banks and insurance companies. (Brown, 2707, 2712)

61. There are at least 47 life insurance companies with offices in Philadelphia. (Ex. D-65)

(2) Savings and Loan Associations

62. Federal and state savings and loan associations and building and loan associations compete with commercial [fol. 6833] banks in the Philadelphia area in the fields of:

(a) savings accounts (Harris, 2336; Brown, 2583);

(b) mortgage loans (Beadle, 998-1001; Worstall, 1116-7; MacMillen, 1254; Keith, 1594, 1620-1; Harris, 2365); and

(c) home improvement loans (Harris, 2348; Satterfield, 2123-4; Ritter, 3153-4; Galfand, 3270).

63. In the ten-county Delaware Valley area there are 615 federal and state savings and loan and building and loan associations with aggregate savings deposits of

$1,498,413,000 and aggregate mortgage loans of $1,530,048,000. (Ex. D-32, D-65)

64. In the Philadelphia area competition also comes from savings and loan associations from as far away as California, which advertise extensively in the Philadelphia area and which obtain deposits through brokers. (Harris, 2336; Brown, 2586-7, 2589-90; Ex. D-35)

65. Savings and loan associations have had a greater growth than that of commercial banks; in the four-county area the deposits of savings and loan associations rose 164% between 1951 and 1959, compared to an increase of 44% and 45% respectively in the savings deposits of Girard and PNB. (Harris, 2336; Brown, 2709; Ex. D-61)

[fol. 6834] (3) Mutual Savings Banks

66. Mutual savings banks compete with commercial banks in the Philadelphia area in the fields of:

(a) savings accounts (Brown, 2583, 2601; Galfand, 3270; McGinley, 3453-4; Keith, 1594, 1620-1; Beadle, 999-1001; Potts, 1461);

(b) mortgage loans (Harris, 2365; Smith, 529-30; McGinley, 3453-4); and

(c) home improvement loans (McDowell, 2935-6)

67. Mutual savings banks also compete with commercial banks for demand deposits; individual depositors tend to treat checking and savings accounts interchangeably and savings accounts are often used by depositors as substitutes for checking accounts. (Brown, 2604-6; Adams, 3508; Harris, 2312, 2317)

68. There are four mutual savings banks in Philadelphia doing business through at least 52 offices in the four-county area with aggregate savings deposits of $1,883,345,000 and aggregate mortgage loans of $969,298,000. (Harris, 2336; Ex. D-32; D-65; G-57, p. 92).

69. From 1951 to 1959 savings deposits in the four mutual savings banks in Philadelphia increased 76% compared to 45% and 44% respectively for the savings deposits in [fol. 6835]. PNB and Girard. (Ex. D-61)

(4) Credit Unions

70. Credit unions compete with commercial banks in the Philadelphia area in the fields of personal loans, consumer credit financing and savings accounts. (Brown, 2709; Potts, 1493; Keith, 1594, 1620-1; Carter, 3234-5; Harris, 2345, 2348)

71. There are 1655 credit unions in Pennsylvania, New Jersey and Delaware with aggregate contributions from members of $140,314,000 and aggregate loans outstanding of $198,000,000. (Ex. D-32, D-66)

72. The assets of credit unions have increased 1125%, from 1945 to 1959 compared to 54% for commercial banks, 130% for mutual savings banks and 630% for savings and loan associations. (Ex. D-27)

(5) Small Loan Companies

73. Small loan companies and consumer discount companies compete with commercial banks in the Philadelphia area for many types of loans of smaller amounts including personal loans, automobile financing and other consumer credit financing and home improvement loans. (Beadle, 998-1000; Brown, 3860-1; Potts, 1492; Satterfield, 2127; Ritter, 3153-4; Harris, 2344-5, 2348)

[fol. 6836] 74. In the ten-county Delaware Valley area there are 343 small loan companies and 154 consumer discount companies with outstanding loans aggregating over $174,000,000. (Ex. D-66)

(6) Finance Companies

75. Finance companies compete with commercial banks in the Philadelphia area for many types of loans including personal loans, consumer credit financing, home improvement loans, inventory and equipment financing, automobile financing, and prefabricated home financing. (MacMillen, 1254; Harris, 2344; Potts, 1493-4; Keith, 1594, 1620-1; Satterfield, 2123-4, 2127; Ritter, 3146, 3148-9, 3153-5)

76. Finance companies make secured commercial loans in the Philadelphia area. (Harris, 2351, 2358)

77. There are at least 9 finance companies with headquarters in the Philadelphia area with aggregate loans outstanding of over $100,000,000; at least 44 other finance

companies have offices and do business in the Philadelphia area, 11 of which have aggregate loans outstanding of over $12,000,000,000. (Ex. D-66)

(7) Other Competition

78. Factors make secured loans to businesses in the Philadelphia area. (Harris, 2351-2, 2469)

[fol. 6837] 79. At least 17 mortgage service companies in Philadelphia sell to or obtain for financial institutions located all over the country mortgage and home improvement loans on real estate in the Philadelphia area, and are in active competition with commercial banks located in the Philadelphia area. (Harris, 2366-7; Satterfield, 2123-4; Carter, 3234-5; Ex. D-65)

80. Mutual funds compete with commercial banks in the Philadelphia area for time and demand deposits. (Harris, 2340; Brown, 2607)

81. United States savings bonds compete with commercial banks for the savings dollar. (Harris, 2339; Brown, 2604)

82. At least 15 pension and profit sharing trusts compete in the Philadelphia area with commercial banks in the mortgage loan field and are entering the field of commercial loans. (Harris, 2357, 2365, 2455; Brown, 2708; Ex. D-65)

83. Indivjduals compete with commercial banks for mortgage loans. (Harris, 2365, 2481)

84. Individuals compete with commercial banks as executors, administrators, trustees, guardians and other fiduciaries; in Philadelphia in recent years the administration of more decedents' estates over $50,000, both in number and [fol. 6838] dollar amount, has been committed to individuals than to all the trust companies (in and out of Philadelphia) combined. (Ex. D-69)

85. Commercial paper is an important competitor for time and demand deposits of large depositors in commercial banks. (Harris, 2321; Brown, 2590-2; McDowell, 2919-20)

86. United States Treasury bills and other short-term government obligations are important competitors for time and demand deposits of large depositors in commercial banks. (Harris, 2321-2; Brown, 2593, 2599-2600, 2602-3; Merriwether, 3579-81; McDowell, 2919-20)

87. Trade credit extended by suppliers of goods to the purchasers thereof competes with bank loans; for small businessmen this is usually the principal method of financing. (McDowell, 2932)

88. Credit extended by retail outlets to customers competes with consumer-credit financing by commercial banks to an important degree. (McDowell, 2934-5)

89. Small and medium-sized businesses rely less on bank loans than either trade credit or mortgages and bonds. (Ex. G-193, p. 23)

90. The fact that various competing financial institutions use commercial bank services does not adversely affect their ability to compete with commercial banks.

[fol. 6839] 91. The ability of the commercial banking system to expand credit is not a factor affecting competition between commercial banks and other financial institutions. (Harris, 2288-9)

92. Plaintiff has introduced no evidence relating to defendants' proportion of the total amount of business for which commercial banks compete with other institutions or other forms of investment in any category of business or in any geographical area.

[fol. 6840] IV. Commercial Banking in the Delaware Valley

93. As of June 30, 1960 PNB had assets of $1,064,335,000, deposits of $924,495,000 and loans of $523,612,000. As of the same date Girard had assets of $740,920,000, deposits of $650,790,000 and loans of $399,362,000. (Ex. G-57, p. 29; G-2, G-3).

94. PNB does business through 28 banking offices of which 11 are located in Philadelphia, 5 in Bucks County, 5 in Delaware County and 7 in Montgomery County. (Ex. G-57, pp. 46, 63-4). Girard does business through 39 banking offices of which 21 are located in Philadelphia, 12 in Delaware County and 6 in Montgomery County. (Ex. G-57, pp. 2-5).

95. As of December 31, 1960 there were 17 commercial banks with main offices in Philadelphia (including Brown Brothers Harriman, a private bank with offices in New York and a substantial office in Philadelphia); in addition First Camden National Bank and Trust Company, with its main office in Camden, New Jersey, has an office in Philadelphia. There are 100 additional commercial banks with main offices

in the 9 counties adjacent to Philadelphia, consisting of 9 in Bucks County, 1 in Delaware County, 14 in Montgomery [fol. 6841] County, 19 in Chester County, 17 in Burlington County, New Jersey, 9 in Camden County, New Jersey, 13 in Gloucester County, New Jersey, 10 in Mercer County, New Jersey, and 8 in New Castle County, Delaware. Many of these banks operate through multiple offices; there are 284 commercial banking offices in Philadelphia, Delaware, Bucks and Montgomery Counties and more than 400 banking offices in the ten counties described above. (Ex. D-15, G-1, G-57, pp. 43-71).

96. Notwithstanding the decrease in the number of banks in the four-county area, from 1947 to 1960 the number of banking offices in that area has risen from 178 to 283. (Ex. G-13).

97. The increase in population and the expansion of industry and commerce in the Philadelphia area led to a need for larger banks; many small banks were inadequate to care for the increasing banking needs of the communities in which they were located. (Keith, 1605-6, 1616-7; Horan, 3184-5; Rainer, 3854-5).

98. Small banks in the Philadelphia area have found mergers with larger banks a solution to their problems of inadequate banking services, rising costs and management succession. (Keith, 1567-8, 1573, 1613-4; Potts, 1506).

[fol. 6842] 99. Merger with existing banks in the suburban and rural areas around Philadelphia was in many cases the only feasible way for larger banks to follow their customers into these areas. (Keith, 1566, 1572, 1607-8; Beadle, 814, 984-5, 992-6; Brown, 2558-9).

100. PNB and Girard have opened new branch offices in the four-county area to serve existing customers and to participate in the growth of new communities. (Beadle, 861-2, 884, 974, 995-6; Worstall, 1073-6, 1094-6, 1108-9).

101. Prior to 1951, PNB and Girard Trust Company were wholesale banks dealing primarily with large customers, Girard Trust Company also having a large trust business. (Potts, 1347-50, 1498, 1500; Brown, 2557, 2781).

102. In response to significant changes in the location of their customers, the expansion of commerce and industry in the Philadelphia area, and the increase in importance of small customers, PNB and Girard Trust Company changed

their policies; since 1951 PNB has begun retail banking services and entered the personal trust and consumer credit fields, and Girard embarked on many retail banking services following the merger in 1951 of Girard Trust Company with Corn Exchange National Bank and Trust Company. (Potts, 1498-1500; Brown, 2555-67).

[fol. 6843] 103. Following mergers by PNB and Girard with smaller banks in the neighboring communities, the banking services available to members of those communities have increased substantially; many of these services were not previously offered by the local banks. (Brown, 2703-4; Reller, 3120-3, 3141; Keith, 1614-5)

104. The size of loans, secured and unsecured, which PNB and Girard officers at branch locations may make on their own authority is substantially greater than the loans previously available at the local banks; as a result borrowers are able to obtain larger loans and obtain them more quickly from Girard and PNB branches than was previously the case at the local banks. (Beadle, 969-70; Worstall, 1053-5; Brown, 2686-9, 2699-2700; Reller, 3148-9; Ferraro, 3725-9; Rainer, 3855-6, 3858-9; Ex. D-36)

105. Industries located in the areas served by PNB and Girard branches, which were not having their borrowing requirements met by the local banks, are now being taken care of. (Reller, 3115-6; Rainer, 3856; Horan, 3184-5)

106. More funds are available for loans through PNB and Girard branches than were previously available through [fol. 6844] local banks; in each of PNB's branch divisions the ratio of loans to deposits is substantially higher than the ratios previously maintained by the local banks with which PNB merged. (Beadle, 967-70; Ex. D-19).

107. The effect of bank mergers in the Philadelphia area has been substantially to increase and sharpen competition among commercial banks; competition is more intense now than when there was a much greater number of banks. (Potts, 1427-8; Keith, 1584, 1614-5; Jennings, 3301; Harris, 2379; Weinrott, 3105-7; Sienkiewicz, 2057, 2063-4; Galfand, 3271; Hankin, 3841-2; Mason, 3049).

108. There is no evidence that any prior merger in the Philadelphia area restrained trade or handicapped the growth of small banks. (Harris, 2377; Brown, 2767; Hankin,

3840-1; Galfand, 3272; Mason, 3050; Weinrott, 3096-8; Horan, 3171-5; Sienkiewicz, 2064-5; Carter, 3238-9).

109. During the period 1951 to 1960, PNB and Girard experienced deposit growth of 13.9% and 14.4% respectively, compared to an average of 21.9% of all 17 banks with head offices in Philadelphia (including Brown Bros. Harriman & Co.). (Ex. D-18).

[fol. 6845] 110. During the period 1951 to 1960, 12 of the other 15 banks in Philadelphia, including 3 of the 4 smallest, experienced a percentage deposit growth greater than that of either PNB or Girard; 11 of these 12 experienced growth greater than the 21.9% average of all such banks and 6 of these experienced such growth in excess of 40%. (Ex. D-18).

111. A new bank has been established in the last decade just outside Philadelphia and has experienced rapid and substantial growth. (Hankin, 3840).

112. Several of the smaller Philadelphia banks have opened new branches in the center of the city in recent years; these offices have successfully competed with the center city offices of the larger banks. (Weinrott, 3096-7; Galfand, 3271-2; Horan, 3175-6).

113. During the period 1951 to 1960, every one of the 9 commercial banks with main offices in Bucks County experienced percentage deposit growth greater than that of either PNB or Girard, the smallest being 30.5% and the largest being 112.5%. (Ex. D-18).

114. During the period 1951 to 1960, the only commercial bank with a main office in Delaware County experienced percentage deposit growth of 95.4%, over six times as great as that of either PNB or Girard. (Ex. D-18).

[fol. 6846] 115. During the period 1951 to 1960, 13 of the 14 commercial banks in Montgomery County experienced percentage deposit growth greater than that of either PNB or Girard, the smallest of the 13 being 18.7%, four being in excess of 90% and one being 1,116%. (Ex. D-18).

116. During the period 1951 to 1960, 17 of the 19 commercial banks with main offices in Chester County experienced percentage deposit growth greater than that of either PNB or Girard, the smallest of the 17 being 16.3% nine being in excess of 40% and the largest being 128%. The remaining two of the 17 had growth of 13.1% and 14.0%

compared to the 13.9% and 14.4% of PNB and Girard respectively. (Ex. D-18).

117. During the period 1951 to 1960, all of the 17 commercial banks with main offices in Burlington County, New Jersey, experienced percentage deposit growth greater than that of either PNB or Girard, all but two being in excess of 40%, nine being in excess of 80% and the largest being 195.6%. (Ex. D-18).

118. During the period 1951 to 1960, all of the 9 commercial banks with main offices in Camden County, New Jersey, experienced percentage deposit growth greater than that of either PNB or Girard, the smallest being 49% and the largest being 162.4%. (Ex. D-18).

[fol. 6847] 119. During the period 1951 to 1960, all but one of the 13 banks with main offices in Gloucester County, New Jersey, experienced percentage deposit growth greater than that of either PNB or Girard, the smallest being 18.8%, ten of them being in excess of 50% and the largest being 282.8%. (Ex. D-18).

120. During the period 1951 to 1960, all of the ten commercial banks with main offices in Mercer County, New Jersey, experienced percentage deposit growth greater than that of either PNB or Girard, eight of them being in excess of 50%, six of them being in excess of 75%, and the largest being 132.6%. (Ex. D-18).

121. During the period 1951 to 1960, all but one of the eight commercial banks with main offices in New Castle County, Delaware, experienced percentage deposit growth in excess of that of either PNB or Girard, the smallest of them being 25.2%, three being in excess of 90%, and the largest being 458%. (Ex. D-18).

122. During the period 1951 to 1960, 107 of the 115 banks with main offices in the ten-county Delaware Valley area (including Brown Bros. Harriman & Co.), other than PNB and Girard, experienced percentage deposit growth greater than that of either PNB or Girard. (Ex. D-18).

[fol. 6848] 123. The commercial banks in Philadelphia today are strong and vigorous competitors in offering commercial banking services to the public. (Harris, 2379; Mason, 3048; Galfand, 3269)

124. The 100 commercial banks in the nine counties adjacent to Philadelphia compete in varying degrees with

PNB and Girard in offering banking services comparable to those offered by PNB and Girard within the range of the resources of such banks. (MacLaren, 2525; Brown, 2768, 3825).

125. PNB makes a substantial number of small loans as a matter of policy, reviews all loan applications rejected by branch officers, and has set up special programs for making loans to small businesses. (McDowell, 2911-3).

126. During times of tight money Girard cuts back on its loans to large businesses rather than its loans to small businesses. (Brown, 2777-9).

127. The branch systems of PNB and Girard cover generally complementary areas; outside the center city area of Philadelphia there is scarcely any overlap between service areas of Girard and PNB branches, except in the 69th Street area where it is planned to close the PNB branch after the merger. (Beadle, 865, 985-7; Keith, 1609; Potts, 1333; Brown, 2569; Ex. D-10, D-11).

[fol. 6849] V. Effect of the Merger on Competition

A. Banking Concentration

128. Banking concentration in a community is a product of the need for a bank large enough to meet the banking needs of commerce and industry. (Jennings, 3327-8)

129. The amount of concentration of banking assets within a city or other geographic area is not a measure of competition within that area. (Ex. D-48, pp. 59-60)

130. A large industrial community benefits economically from the existence of competitive banks of all sizes. (Horan, 3224)

131. Of the ten largest metropolitan areas in the United States, Philadelphia, which is the fourth in size, would after the merger rank ninth on the basis of the relation of population to the largest commercial bank in each such city. (Ex. D-20)

132. If the 53 reserve and central reserve cities of the Federal Reserve System are ranked in the order of the percentage of total commercial banking assets in each city held by the largest commercial bank in that city as of June, 1956:

[fol. 6850] (a) Philadelphia would, after the proposed merger, rank 32nd with 36.16% ;

(b) 26 cities exceed 40% ;
(c) 14 cities exceed 50% ; and
(d) 5 cities exceed 60%. (Ex. D-22).

133. If the same 53 cities are ranked in the order of the percentage of the total commercial banking assets in each city held by the five largest commercial banks in that city as of June 30, 1956:

(a) Philadelphia, after the merger, would rank 43rd with 83.82% ;
(b) 36 cities exceed 90% ; and
(c) 21 cities exceed 95%. (Ex. D-23).

134. There are four commercial banks in the United States, each with a lending limit greater than the aggregate of the lending limits of all the commercial banks in Philadelphia. (Ex. D-24).

135. Each of 20 commercial banks in the United States has a lending limit greater than that of any commercial bank in Philadelphia, and nine of these are in cities smaller than Philadelphia. Thirteen such banks, four of which are in cities smaller than Philadelphia, have a lending limit greater than that of the proposed merged bank. (Ex. D-24).

[fol. 6851] 136. Of 224 cities with populations in 1956 over 50,000, 190 had a commercial bank with 35% or more of the total commercial banking assets in the city, and 96 had a bank with 50% or more of such assets. (Ex. D-46).

137. If 110 cities in the United States with populations of 100,000 or more are ranked in the order of the percentage of total commercial banking assets in each city held by the largest commercial bank in that city as of June 30, 1956:

(a) Philadelphia would, after the proposed merger, rank 79th with 36.2% ;
(b) 63 cities exceed 40% ;
(c) 33 cities exceed 50% ; and
(d) 12 cities equal or exceed 60%. (Ex. D-47).

138. Of the 34 most populous metropolitan areas in states, like Pennsylvania, with limited area branch banking, 17

would have a greater concentration of bank deposits in their five largest banks, 20 would have a greater concentration in their three largest banks, and 16 would have a greater concentration in their largest bank, than Philadelphia County would have after the proposed merger. (Ex. D-55).

139. Every city in Pennsylvania; and in the ten-county [fol. 6852] Delaware Valley area outside Pennsylvania, with a 1960 population over 100,000, has a commercial bank with a larger percentage of the commercial banking assets in that city, than Philadelphia would have after the proposed merger. There is adequate banking competition in each such city. (Ex. D-47; Jennings, 3325-3327).

140. Between 1940 and 1960:

(a) the percentage of deposits of all commercial banks in the United States held by the 100 largest banks decreased from 56.7% to 46.2%;

(b) the percentage of such deposits held by the 10 largest banks decreased from 26.4% to 20.3%; and

(c) the percentage of such deposits held by the largest one-half of 1% of banks decreased from 52.2% to 40.9%. (Ex. D-49; D-53).

141. In the 16 states which, like Pennsylvania, have limited area branch banking:

(a) the percentage of assets of all commercial banks in the state held by the largest commercial bank decreased, between 1940 and 1960, in 13 states; and

(b) the percentage of assets of all commercial banks in the state held by the five largest commercial banks decreased between 1940 and 1960 in 10 states. (Ex. D-50, D-54).

[fol. 6853] 142. In the 31 most populous metropolitan areas (including Philadelphia County) in states with limited area branch banking the percentage of assets of all commercial banks in the area held by the largest bank decreased between 1934 and 1960 in 16 areas. (Ex. D-51, D-55).

143. There is no evidence of adverse effects on businessmen in any area as a result of banking concentration in that area. (Jennings, 3370-1).

144. There is no evidence that there has been any adverse effect upon competition or any restraint of trade in any of the 190 cities in the United States of over 50,000 population in which the lead bank has had a greater proportion of the

total bank assets than the merged bank would have in Philadelphia.

[fol. 6854] B. Competition After the Merger

145. The merger would have no adverse effect on other Philadelphia banks. (Harris, 2349, 2369; Mason, 3051-64; Weinrott, 3102-7; Horan, 3188-93; Carter, 3238-9; 3243-6; Galfand, 3274-6; Twist, 3551; Hankin, 3844-8)

146. The increased ability of the merged bank to compete for larger customers would not adversely affect existing relationships between large customers in Philadelphia and other Philadelphia banks. (Bradshaw, 3526; Andrews, 3614-5; Amsterdam, 3626-7; Wilson, 3658; Oakes, 3713-5)

147. An immediate result of the merger would be loss of business by the merged bank to other banks in the Philadelphia area. (Brown, 2770-2; Horan, 3173; Galfand, 3274-5; Jennings, 3359; Harris, 2314)

148. Smaller Philadelphia banks would be benefited by the merger by being able to share in the new banking business the merged bank would bring to Philadelphia. (Weinrott, 3102-4; Mason, 3051)

149. The merger would not lead to an increase in service charges; the merged bank would have no power to cause other Philadelphia banks to raise their charges, or to im-[fol. 6855] pose on such banks its own charges. (Harris, 2314-5; Brown, 2787; Carter, 3242-3; Mason, 3059; Horan, 3189)

150. The merger would have no effect on interest rates on loans; the merged bank would have no power to cause other Philadelphia banks to raise their rates, or to impose on such banks its own interest rates. (Brown, 2033-7; Harris, 2376-7; Potts, 1518-9, 1521-2; McDowell, 2937-8; Mason, 3060-1; Carter, 3242-4; Horan, 3190-1; Weinrott, 3105-7; Jennings, 3368-9; McGinley, 3455)

151. The merger would have no effect on interest rates paid on savings accounts. (Potts, 1521; Mason, 3058; Horan, 3188; McGinley, 3455; Hankin, 3845)

152. The merger would not affect the freedom of depositors to put their deposits in the bank of their choice; the merged bank would have no power to prevent or affect such free choice, or prevent its own depositors from withdrawing their deposits at any time. (Brown, 2641-3; Harris,

2376-7; McDowell, 2937-8; Mason, 3060-1; Carter, 3243-4; Horan, 3190-1; Weinrott, 3105-7; Jennings, 3368-9)

153. The merged bank would have no power to prevent any borrower from having his banking needs met by any other Philadelphia area bank. (Harris, 2376-7; McDowell, 2937-8; Mason, 3060-1; Carter, 3243-4; Horan, 3190-1; Weinrott, 3105-7; Jennings, 3368-9)

[fol. 6856] 154. The merged bank would have no power to affect or control the total lendable money supply in the Philadelphia area. (Harris, 2376-7; Jennings, 3362-3)

155. The merger would not adversely affect the availability of credit to small and medium-sized businessmen. (Brown, 2774-5, 2793; Galfand, 3275-7; Jennings, 3357-9; Harris, 2353; Mason, 3055; Hankin, 3844)

156. The merged bank would have no competitive advantage over other banks in the opening of new branches. (Ex. G-188, p. 4)

157. The proposed merger would have no adverse effect on competition in the Philadelphia area at the branch level. (Keith, 1609-10; Beadle, 865, 986-7)

158. After the merger borrowers would have available the following alternative commercial banking choices in Delaware Valley for the size of loan indicated, without regard to the number of banks outside that area which compete for the larger customer. (Ex. D-16):

Loans	Number of Commercial Banks		
	Phila. Co.	4 Counties	10 Counties
Below $10,000	17	41	116
Up to $25,000	16	41	110
Up to $50,000	14	35	90
Up to $100,000	14	27	51
[fol. 6857]			
Up to $250,000	13	18	25
Up to $500,000	9	10	16
Up to $1,000,000	7	7	11
Up to $2,500,000	4	4	5
Up to $5,000,000	3	3	3
Up to $7,000,000	2	2	2
Up to $8,000,000	1	1	1
Up to $15,000,000	1	1	1

159. Three accessible commercial banks are sufficient for a prospective borrower to determine whether a loan is bankable at the going rate of interest. (McDowell, 2913-4; Jennings, 3362)

160. The geographical distribution of banking offices in the Philadelphia area is ample to provide adequate competitive banking service to prospective customers throughout the area; this would not be affected by the merger. (Ex. D-6, D-7, D-8, D-9)

161. All types of customers, including small businessmen, would have ample alternative choices for commercial banking services after the merger. (McDowell, 2913-4; Mason, 3088-9; Jennings, 3362)

[fol. 6858] 162. A proper analysis of the effect of this merger on competition may be made only on the basis of each of the various types of business in which commercial banks engage, taking into account competition which commercial banks face from various sources, rather than treating commercial banking as a whole. (Harris, 2369-70)

163. The merger would have no substantial adverse effect on competition in any geographic area for

(a) demand deposits of any type, including IPC demand deposits (Harris, 2313-4, 2318-9, 2322-3, 2328-9, 2331-2; Ex. D-15, D-41, D-62);

(b) time deposits of any type, including time deposits of partnerships and corporations (Harris, 2342; Ex. D-15, D-32, D-41, D-62);

(c) savings accounts (Harris, 2340; Ex. D-15, D-32, D-41);

(d) commercial and industrial loans (Harris, 2352, 2357; Mason, 3055; Ex. D-15, D-16, D-41);

(e) real estate loans (Harris, 2369, Ex. D-15, D-16, D-41, D-65);

(f) instalment loans to individuals (Harris, 2346, 2349; Ex. D-15, D-16, D-41, D-66);

[fol. 6859] (g) personal trust services (Ex. D-69);

(h) single-payment loans to individuals (Ex. D-15, D-16, D-41); or

(i) any other commercial banking service.

164. There is no reasonable probability that the proposed merger would substantially lessen competition or tend to create a monopoly in any geographic area for any of the

commercial banking services listed in Request 163, above.

165. Even if commercial banking is treated as a whole, the proposed merger would have no substantial adverse effect on competition in commercial banking in any geographic area. (Harris, 2378; Mason, 3048-9, 3063-4; Weinrott, 3097-8, 3107; Horan, 3171-2, 3184-5, 3192; Carter, 3238-9, 3245-6; Galfand, 3271-2, 3274-5; Hankin, 3841-2, 3847)

166. There is no reasonable probability that the proposed merger would substantially lessen competition or tend to create a monopoly in commercial banking in any geographic area. (Mason, 3061; Weinrott, 3106; Horan, 3192; Carter, 3245; Jennings, 3369)

167. With respect to commercial banking and each type of commercial banking service described in Request 163 above there would remain after the merger an adequate [fol. 6860] number of alternative choices for bank customers. (Harris, each reference in Request 163; Mason, 3055; Ex. D-16, D-32, D-41, D-62, D-65, D-66, D-69)

168. Competition in commercial banking in the Philadelphia area would be even more intense after the merger than at the present. (McDowell, 2939; Harris, 2378; Brown, 2770-1, 2793; Jennings, 3369; Hankin, 3847)

169. Competition in the regional, national and international markets would be increased by the merger by virtue of the new bank's increased ability to compete with large banks in other cities. (Harris, 2322-3, 2349; Potts, 1516; Jennings, 3359; Oakes, 3713, 3755-6)

170. The proposed merger is not motivated by an intent or purpose to restrain trade or adversely affect competition in any commercial banking service in any area. (Potts, 1507-16; Brown, 2713-23)

171. The proposed merger would not substantially and unreasonably increase concentration in commercial banking in the Philadelphia area. (Mason, 3061-2; Weinrott, 3106; Horan, 3192; Carter, 3245; Jennings, 3369)

172. The proposed merger would not substantially and unreasonably lessen existing or potential competition in the commerce or industry served by commercial banks in the Philadelphia area. (Brown, 2794; Mason, 3062; Wein- [fol. 6861] rott, 3106-7; Horan, 3193; Carter, 3245; Jennings, 3369)

[fol. 6862] VI. Convenience and Needs of the Philadelphia Community

A. Need for the Merger

173. Philadelphia is the fourth largest city and metropolitan area in the United States; its port is first in the country on the basis of bulk tonnage and value of imports. (Potts, 1367; Brown, 2761-2, 3788-90; Bradshaw, 3532; Dilworth, 3904)

174. Philadelphia is the center of a highly developed and diversified industrial and commercial complex known as "Delaware Valley". The community contains a substantial number of large industries whose development is as important to the community as that of smaller industries. (Ex. G-57, pp. 9, 74-5; Ex. G-164, p. 2; Jennings, 3382-4)

175. It is desirable for a community to have a bank large enough to meet normal banking needs of its large businesses. (Jennings, 3313-4; Harris, 2375)

176. Large companies in the Philadelphia area want to be able to do business with Philadelphia banks because of their connections with the community and it is important that they do so because of the close contacts which are required between their top officers and the bankers. (Wilson, 3652, [fol. 6863] 3656-7; Amsterdam, 3625; Andrews, 3611; Deasy, 3670-1; Oakes, 3700-1)

177. Banks in Philadelphia have lagged far behind the growth of industry in the area and have not been able to meet its industry's banking needs. (Jennings, 3314-5; Merriwether, 3576-7; Brown, 3788-90; Graves, 3891; MacLaren, 2263; Ex. G-57, pp. 8-9; Ex. D-25).

178. There is presently no Philadelphia bank large enough to serve adequately the banking needs of large industry in the Philadelphia area. (Harris, 2375-6; Horan, 3192-3; Jennings, 3379; Bradshaw, 3524-5; Graves 3902-3)

179. The sizes of PNB and Girard have prevented them from meeting the banking needs of their customers for the following reasons:

(a) It is important for borrowers to be able to deal with a bank whose lending limit is sufficient to meet their entire borrowing needs or a substantial portion of such needs even though they may not borrow this amount at any one time.

(Jennings, 3315-6, 3319; Bradshaw, 3522; Merriwether, 3573-4; Amsterdam, 3627-9)

(b) Aside from the lending limit, the size of the resources of a bank imposes a maximum limit on loans to certain [fol. 6864] customers beyond which it would be unsafe or unwise for the banks to lend. (Brown, 2724, 2742-4; MacMillen, 1267-9; Mason, 3055-6)

(c) Both Girard and PNB have experienced the loss of business customers which have outgrown Philadelphia Banks and have moved on to larger banks in other cities. Customers may leave a bank even though their borrowing requirements are still well below its lending limit in order to maintain a margin between their lines or loans and the lending limit of the bank. (Mason, 3064-5; Merriwether, 3574-5; Amsterdam, 3637-9; Wilson, 3653; Graves, 3888-90; Brown, 2718, 2724, 2727-9, 2732, 2742-4; Jennings, 3315-6, 3319; Deasy, 3667-8, 3673)

(d) PNB and Girard are not large enough to develop the specialization which large borrowers require for their business. (MacDowell, 2895-2901, 2907-8; Oakes, 3702-4; Merriwether, 3597-9)

(e) PNB and Girard are not large enough to develop the foreign service which customers dealing abroad require. (Wilson, 3657-8; Merriwether, 3596; Bradshaw, 3532; McDowell, 2902-5)

180. Many industries with headquarters in or near Philadelphia go to New York and other cities for their major [fol. 6865] banking needs because no bank in Philadelphia is large enough to provide the funds and services necessary to meet their needs. (Potts, 1410-1; Brown, 2721; Bradshaw, 3524; Oakes, 3701, 3710-1; Harris, 2306; Brown, 3801-2; Andrews, 3604; Amsterdam, 3623; Wilson, 3651; Merriwether, 3565-6)

181. The largest bank in Philadelphia ranks twentieth in the United States and is smaller than one or more banks in San Francisco, Pittsburgh, Boston, Detroit, Cleveland and Dallas, all of which are smaller in population than Philadelphia. (Potts, 1510-3; Dilworth, 3908; Ex. D-24)

182. When the twelve largest metropolitan areas in the United States are ranked on the basis of various measures of economic activity Philadelphia ranks fourth or fifth,

whereas Philadelphia ranks ninth on the basis of the size of its leading bank. (MacLaren, 2252-4; Ex. G-57, pp. 127-134)

183. There are 17 commercial banks in New York City, each with a lending limit of $1,000,000 or more. (Ex. D-39)

184. In losing lending business to banks in other cities, Philadelphia banks likewise lose substantial deposits, personal trust business, and other business, which normally [fol. 6866] follow corporate borrowings. (Bradshaw, 3521-2; Oakes, 3708-9; Brown, 2747, 2763)

185. The merger is necessary in order to prevent any further loss of banking business by Philadelphia banks. (McDowell, 2882-3, 2909; Merriwether, 3585-6)

186. It is impractical and uneconomic to overcome the inadequacy of the lending capacities of PNB and Girard by participating loans to other banks for the following reasons:

(a) Supporting deposits are required by banks as prerequisites for loans. (MacMillen, 1262-3, 1278-9; Brown, 2359, 2677, 3810; Potts, 1442-3)

(b) To take a participation the participating bank will require a compensating deposit from either the originating bank or the customer. (Brown, 2677-81; Harris, 2360-1)

(c) Large banks like PNB and Girard keep their balances with their large correspondent banks in amounts sufficient to compensate those banks only for check clearances and like routine services and not in amounts necessary to support loans. (Brown, 2677-81, 2815; Harris, 2360-1)

[fol. 6867] (d) The participation of loans by small banks to their large city correspondent banks is not comparable to participations by large banks. Small banks keep substantial balances on deposit with their correspondents as reserves and as compensation for specialized services. These balances support loans participated to the large city correspondent bank. (Brown, 2674-5; Harris, 2360)

(e) Large borrowers prefer not to deal with a number of participating banks because of the administrative burden, the added cost of maintaining deposit balances with a number of banks, and the time required in developing a new banking relationship. (Bradshaw, 3522; Andrews, 3604-6; Amsterdam, 3627-30; Wilson, 3660; Oakes, 3716-8; Graves, 3893-4)

(f) A large bank would run a substantial risk of losing customers and deposits if it participated loans to other large banks. (Harris, 2361)

(g) The participation of a loan exceeding its lending limit by a large bank is rare. (Harris, 2360-1; Brown, 2669, 2671, 2677-80; Potts, 1403, 1405)

187. The multi-bank loans now shared by large city banks are wholly different from the type of participating loans which small banks give to or receive from large city correspondents; multi-bank loans are arranged by the bor- [fol. 6868] rower, which determines the identity of the participating banks and the amount to be allocated to each. (Brown, 2647-9, 2651-3, 2655, 2662, 2664-6; Wilson, 3655-9; Oakes, 3715-6; Harris, 2361)

188. The rate of increase of deposits of PNB and Girard combined from 1949 to 1959 was 12.31% compared to 54.62% for all banks in the United States. (Ex. G-57, p. 80)

189. Merger is the only feasible way in which PNB and Girard can become large enough to meet the banking needs of the community; an adequate increase in size by the sale of stock is not feasible because of the cost and because of the dilution of the earnings available for existing shareholders, and an increase in size by the accumulation of retained earnings would take many years. (Potts, 1432-3, 1522-3, 1533-4; Brown, 3797-9; Horan, 3203-5; Ex. G-57, p. 9)

[fol. 6869] B. Benefits to the Community from the Merger

190. The increased total resources of the merged bank would enable it to create special departments for types of loans and industry groups, increase its services to correspondent banks, establish departments to develop new services and develop the use of electronic equipment. (Potts, 1423; Brown, 2714, 3830-1; McDowell, 2895-8, 2901-7; Ex. G-57, p. 10)

191. The increased total resources of the merged bank would enable it to develop more fully its foreign services through increased investment in PNB's international investment corporation, the formation of an international banking corporation, the use of full-time representatives abroad and the possible opening of foreign branches. (Brown, 2751-2; McDowell, 2902-6)

192. The increased total resources of the merged bank would enable it to improve and expand existing services and make them available to many more customers. (Potts, 1426; McDowell, 2901-3, 2907-8; Brown, 2730-1, 3831-3; Ex. G-57, pp. 78-9)

193. The increased total resources of the merged bank and its $15,000,000 lending limit would enable it to make larger loans to more large corporations. (Potts, 1410-1, 1441; Jennings, 3380-4; Bradshaw, 3522; Graves, 3895-6)

[fol. 6870] 194. The increased total resources of the merged bank would enable it to compete more vigorously and effectively with banks in New York and other cities. (Potts, 1410-11, 1441; Jennings, 3380-4; Bradshaw, 3522; Graves, 3895-6; Brown 2764-6)

195. The new and improved services the merged bank would be able to develop and offer to large businesses would enable it to attract the substantial deposits which are maintained by customers in return for such services. (MacLaren, 2265, 2488-9, 2517; Harris, 2320, 2332; Potts, 1444; Brown, 2833-44; McDowell, 2853-79)

196. The merged bank would attract additional deposits from large customers as compensating balances for loans; many such deposits remain on deposit with the lending bank after the loans are paid off. (Jennings, 3319-20; Bradshaw, 3521; Oakes, 3707-8; Brown, 3810; Potts, 1442-3)

197. Large customers as a group maintain average deposits in amounts substantially greater than their average loans. (Ex. D-26, D-40)

198. The increased size of the merged bank would give it increased prestige which would assist in attracting banking business from outside the Philadelphia area in the national and international fields of competition. (Potts, 1426-7, 1446-7; Brown, 2714; McDowell, 2915-16)

[fol. 6871] 199. The merged bank would have additional funds available for lending to local borrowers by reason of its increased ability to prevent loss of deposits to other larger banks and to attract business in the national and international fields. (Potts, 1516-17; Wilson, 3662)

200. The merged bank would be able to serve more adequately the banking needs of large industries in the community. (Harris, 2375-6; Bradshaw, 3531; Graves, 3891)

201. The increased resources of the merged bank would

enable it to make greater risk loans and thereby give greater assistance to new or growing companies. (Brown, 2792-3; Harris, 2353-4; Graves, 3886-90, 3895-6; Mason, 3064)

202. The merged bank would be better able to assist smaller Philadelphia banks in making loans which exceed the smaller bank's lending capacity. (Weinrott, 3102-4)

203. The merged bank would obtain a greater share of the future banking business of large customers than both together now receive; such business will otherwise go to large banks in other cities. (Brown, 2714, 2748; Merriwether 3584-6)

204. The attraction of such new business by the merged bank would bring with it other banking business in which [fol. 6872] other Philadelphia banks would share. (Brown, 2772-3; Amsterdam, 3636; Carter, 3238-9; Hankin, 3848; Galfand, 3274-5; Horan, 3216, 3222-3)

205. The existence of the merged bank would assist in attracting new business to locate in the Philadelphia area. (Graves, 3891-2; Dilworth, 3907-8)

206. The merger would have a beneficial effect on commerce and industry in the Philadelphia area. (Harris, 2380; Hankin, 3844; Bradshaw, 3531)

207. The improved foreign services of the merged bank would be an important factor in the development of the port of Philadelphia. (Dilworth, 3906)

[fol. 6873] Requested Conclusions of Law

1. The merger of PNB and Girard would not constitute a combination in unreasonable restraint of any part of trade or commerce and would not be a violation of Section 1 of the Sherman Act.

2. The merger of PNB and Girard would not involve an acquisition directly or indirecly, by either defendant of the stock or other share capital of the other within the meaning of Section 7 of the Clayton Act and would not be within the scope of that Act.

3. There is no reasonable probability of a substantial lessening of competition or tendency toward monopoly in any line of commerce in any section of the country as a result of the merger of PNB and Girard.

4. The approval of the merger of PNB and Girard by the Comptroller of the Currency pursuant to the Bank

Merger Act of 1960 is the final and exclusive determination of the legality of the merger under all Federal laws.

[fol. 6874] 5. The complaint should be dismissed and judgment entered for defendants.

It is respectfully requested that the Court adopt the above proposed Findings of Fact and Conclusions of Law.

Civil Action No. 29287

[Title omitted]

Transcript of Argument Sur Pleadings and Proof
Filed November 3, 1961

Philadelphia, Pa., October 27, 1961

Before Hon. Thomas J. Clary, Ch. J.

PRESENT:

George D. Reycraft, Esq., John O'Donnell, Esq., P. Jay Flocken, Esq., and Charles A. Degnan, Esq., Trial Attorneys, Antitrust Division Department of Justice, Washington, D. C., for the Government.

Morgan, Lewis and Bockius by Arthur Littleton, Esq., Ernest R. von Starck, Esq., Donald A. Scott, Esq., Don B. Blenko, Esq., and Martin P. Snyder, Esq., for the Philadelphia National Bank.

[fol. 6876] Barnes, Dechert, Price, Myers and Rhoads, by Philip Price, Esq., Carroll R. Wetzel, Esq., Minturn T. Wright, III, Esq., and John J. Brennan, Esq., for Girard Trust Corn Exchange Bank.

[fol. 6877] The Court: Mr. Reycraft.

OPENING ARGUMENT BY MR. REYCRAFT

Mr. Reycraft: If Your Honor please, I would like to begin this morning by reviewing briefly some of the facts which are fundamental to a consideration of the merits of this case. They would include the agreement to merge, the reasons given for the merger, the type of banking business engaged in by both the Philadelphia National Bank and the Girard, the areas in which they do their business, and the types of customers they serve. I would also like to examine the extent to which the Philadelphia National and the Girard are in direct competition in this area for the various types of banking business in which they engage, and since it has been contended that the elimination of competition here does not have competitive significance, I would like to examine these contentions also; and while I believe our brief has covered the important issues under the Sherman Act and the Clayton Act, I would also like to address myself to those questions and to some of the comments that have been made in the briefs that have been filed, and also the relationship of the Bank Merger Act of 1960 to the antitrust laws.

The Philadelphia National Bank, as Your Honor knows, traces its origin to the Philadelphia Bank, which was organized in 1803. The bank operates under a charter [fol. 6878] which was issued in 1864. Although it has taken over control of approximately 11 banks since that charter was issued, it has had a continuing corporate existence under that charter since 1864; and, of course, the Philadelphia National Bank is the second largest bank in Philadelphia and had, as of June 30, 1960, total assets of approximately $1,066,000, deposits of over $946 million and loans of over $523 million.

Now, approximately 57 per cent of these loans were in the commercial and industrial category. For many years Philadelphia National was the largest bank in Philadelphia, but it lost its position in 1956 to the First Pennsylvania Company, after the merger between the Pennsylvania Company for Banks and Trusts and the First National Bank of Philadelphia.

In 1951 the Philadelphia National began a series of acquisitions to add to its banking business by going into the retail banking field, and these acquisitions added about $173 million to Philadelphia National's deposits and 18 banking offices to its existing offices. Most of the Philadelphia National's growth during this period came from mergers rather than through internal growth from attracting new business, and this resulted no doubt in part from the fact that the Philadelphia National's offices were located [fol. 6879] in the more developed part of the city and they were not represented in the more expanding parts of the Philadelphia area, so that they were apparently unable to attract to their Philadelphia offices a sufficient amount of the new banking business from the rapidly growing counties around Philadelphia, and because of the necessity to go where the business was, they acquired nine banks between 1951 and 1958, and these nine banks all were admittedly in competition with the Philadelphia National when they were acquired.

Now, in expanding a bank there are three principal ways to do it: One is by increasing the capital to provide a basis to attract additional deposits. One is by selling stock. Another is by acquisition of other banks and also by transfer of funds from undivided profits.

Acquisition is no doubt the cheapest and the easiest way to expand any business, whether it is a commercial bank or any other type of business; and in addition to these three methods of expanding a bank's business, de novo branches may be established to attract new business, with the approval of the regulatory authorities.

Of course, an increase in capital accounts by any of these methods adds to the amount which a bank can lend to a single customer, and at the present time Philadelphia National's lending limit is approximately $8,000,000, where [fol. 6880] as in 1950 it was about $5,000,000, so it has

increased by $3,000,000 during that time, and this has been solely by acquisitions and transfers from undivided profits.

Philadelphia National Bank, of course, also makes loans to large local businesses, many of whom do business throughout the United States, and these businesses, of course, require banking connections, not only in Philadelphia, but in the other areas in which they do business.

The financial history of the Philadelphia National Bank has been excellent. Its present capital position is adequate. Its future earnings prospects are good, and the bank's general management is good.

The other partner to the agreement here is the Girard Trust Corn Exchange Bank, which traces its origin to at least as early as 1835. Until 1950 Girard had only one banking office, and in that year it had deposits of $216,000,000. Beginning in 1951 it acquired control of six banks, all of which were its competitors, and by June, 1960, it had total net assets of over $740,000,000, deposits of over $650,000,000, and loans of about $400,000,000, and about 49 per cent of these loans were in the commercial and industrial category.

These six banks acquired by Girard included Corn Exchange National Bank & Trust Company, the National [fol. 6881] Bank of Germantown, North Philadelphia Trust Company, the National Bank of Narberth, Ambler National Bank, and Upper Darby National Bank, and all of these banks, of course, were competitors of Girard at the time they were acquired.

Like the Philadelphia National Bank, Girard has added to its capital accounts during this period by the acquisition of other banks and by transfer from its undivided profits, but it has also sold capital stock and it has increased its capital lending limit by this means. Girard also makes loans to people outside the four county area, although, even more than the Philadelphia National Bank, its business is concentrated within this four-county area in which it has its offices.

Girard, on the record, as it has shown, has excellent management. It is in excellent financial condition, and its operating income has increased from approximately $17½ million in 1950 to a little over $38 million in 1960.

The combination of the two banks was first discussed in 1956, as I have said, shortly after the merger which made the First Pennsylvania Company the largest bank in Philadelphia, and this merger also had the effect of relegating the Philadelphia National Bank to second place in Philadelphia. These discussions, after a temporary halt, were [fol. 6882] culminated in the agreement to merge of December 20, 1960. It was on February 24, 1961, that the proposed merger was approved by the Comptroller of the Currency, and the complaint in this case was filed the following day, February 25, 1961.

The agreement between the banks provides that the business of the two banks will be consolidated under the charter of the Philadelphia National Bank "which shall continue after the effective date of the consolidation," and each of the outstanding shares of the Philadelphia National Bank is to remain outstanding and its stockholders are to retain their present rights to an equitable share of the assets represented by the stock. Each of the shares of Girard stock presently outstanding is to be converted into capital stock of the banking association which continues in existence under the charter of the Philadelphia National Bank, with its name changed to Philadelphia Girard National Bank & Trust Company. Each holder of an outstanding certificate representing shares of Girard stock is to surrender the stock certificate to the bank after the effective date and receive in exchange for this stock shares in the Philadelphia Girard National Bank & Trust Company.

The Court: Now, you argue pretty strongly that that is an acquisition of shares.

Mr. Reycraft: Yes, sir.

The Court: You are really pressing that?

[fol. 6883] Mr. Reycraft: I do, sir.

The Court: Let me ask you this: Suppose Girard stockholders lined up at a table, turned in their shares and got cash, then moved to the next table and put the cash down and got their shares of stock. What would you say about the shares in the new association with the merged assets? What would you say to that? Would they be acquiring shares or would they be selling shares for money?

Mr. Reycraft: If the Girard stockholders all sat down at a table and the Philadelphia National Bank gave them cash

for their shares and they then moved to another table and the assets were conveyed—is that the question?

The Court: Yes.

Mr. Reycraft: I think, Your Honor, there would be no doubt—and I really think I would like to have you ask Mr. Littleton this question—I think there would be no doubt that cash acquisition of stock would be well within the meaning of Section 7 of the Clayton Act.

The Court: I am not talking about that. I am saying that they buy the assets of the bank and pay off the shareholders at X dollars. The shareholders have been paid off.

Mr. Reycraft: Well, under the old Arrow-Hart case the Federal Trade Commission jurisdiction would be ousted [fol. 6884] by such a transaction, because once stock is retired——

The Court: What has the Federal Trade Commission got to do with banks?

Mr. Reycraft: Well, I am talking about the type of stock acquisition that was referred to in the Arrow-Hart, and this is a similar type of transaction, I believe, that Your Honor is referring to. The Arrow-Hart case said that once the stock is retired, the Federal Trade Commission being a statutory agency is limited in its power to grant relief to divesting the physical stock which is actually acquired. Once it is retired, it is no longer in existence. The Federal Trade Commission was ousted of jurisdiction, and, of course, it was to reverse this proceeding that Section 7 was amended in 1950; but in the Arrow-Hart case itself it referred to the Thatcher case, where reference is made to the power of a court of equity to look through such a transaction, and I think it also might be said that if the stock was being held at the time the Federal Trade Commission has filed its complaint, no matter what the intention was to accomplish other transfers of assets thereafter, the Federal Trade Commission would have had jurisdiction.

Now, I use the Federal Trade Commission not because it has jurisdiction of banks, but to illustrate the point on the acquisition of the stock.

The Court: All right, let us assume this, that the Phila- [fol. 6885] delphia National Bank, regardless of shares of stock or anything else, paid $700 million.

Mr. Reycraft: In cash.

The Court: In cash, for the assets.

Mr. Reycraft: I would say that is not covered by the Clayton Act.

The Court: And then the Girard stockholders decided that they do liquidate and pay off their shareholders, and then the shareholders at the same time buy stock in this new bank.

Mr. Reycraft: Well, if there was a cash purchase of the assets, and this is the type of transaction that was involved in the Columbia Steel case, and it is the reason the Department of Justice attacked that under Section 1 of the Sherman Act rather than the Clayton Act. It is not our position that this is covered by the Clayton Act, but if any part of the transaction involved a stock acquisition, then the entire transaction, I believe, Your Honor, is brought into the Clayton Act.

You can't say, "We have done a couple of things which may be illegal, and if one of the things which we have done is legal, that makes the whole thing legal."

It is quite the opposite.

The Court: In other words, you can't buy assets with [fol. 6886] stock? Is that what you are saying?

Mr. Reycraft: Well, I am saying——

The Court: Don't you have to go that far?

Mr. Reycraft: No. I am saying that if there is no transfer of the stock or other share capital, that it wouldn't be a stock acquisition. I say you can pay for assets with wampum or with anything, including stock, and that would be a purchase which would not be within the Clayton Act if it was purely a purchase of assets, but where it involves the entire transfer of the stock or other share capital, which it does, it would be covered by the Clayton Act.

My position, Your Honor, is here, if this transaction is consummated in the manner in which it is now intended to be consummated, there is not going to be anything left.

Now, there is share capital or stock outstanding at the present time, and I would say, what happens to that stock? If it hasn't been acquired, where did it go? And I think clearly it has been acquired. They have acquired and they wish to acquire every single thing which the Girard Trust has—its assets, its share capital. Everything that the Girard has will be acquired by the Philadelphia National

Bank and continued under its existing charter. So I say [fol. 6887] that they have acquired everything; and if any part of that acquisition is a stock acquisition, and literally under the contract they are acquiring the stock, and I think realistically they are acquiring the stock and share capital and the equity interest represented by the stock and share capital, I say it comes within the Clayton Act.

[fol. 6888] I would like, if I may, Your Honor, to refer at this point to the du Pont-General Motors case. Your Honor will recall, I know, that for a number of years there was a controversy as to whether Section 7 of the Clayton Act applied to vertical acquisitions, when it is a stock purchase, when it was a vertical foreclosure rather than a horizontal acquisition.

Now, for many years the Federal Trade Commission had been telling Congress that it did not apply to vertical acquisitions and they had been asking Congress to amend the statute to make it clear that it did.

Now I would like to read this quote because I think it is so important. The Supreme Court (and this is in 1957, in June), said:

> During the thirty-five years before this action was brought, the Government did not invoke Section 7 against vertical acquisitions. The Federal Trade Commission has said that this section did not apply to vertical acquisitions.

Also, there is a citation to an FTC report. Also, the House Committee considering the 1950 revision of Section 7 stated:

> "It has been thought by some that this legislation (that is the 1914 Act) applies only to the so-called horizontal mergers."

[fol. 6889] The House report adds, however, that the 1950 amendment was proposed, and I quote, "to make it clear" and the Supreme Court emphasized "to make it clear" that the bill applies to all types of mergers and acquisitions, vertical and conglomerate as well as horizontal, to make it clear that the bill, that is old Section 7, which is limited to stock acquisitions of the type in the

Arrow-Hart case, applies to all types of mergers and acquisitions, vertical and conglomerate, as well as horizontal.

So I say to whatever extent the briefs have talked about the dictum in the Arrow-Hart case applying to corporate mergers, and they talked about the Celanese case, which was decided in 1950, in June, and the amendment to the Clayton Act took place in December of 1950. Substantially, the Celanese case contributes to this amendment taking place and the House Committee at that time on the 1950 amendment, after the Celanese case, Your Honor, and after the Arrow-Hart case, said the 1950 amendment was proposed to make it clear that the bill applies to all types of mergers and acquisitions, vertical and conglomerate, as well as horizontal.

So I think that whatever inference there is and whatever dictum there is in the Arrow-Hart case, of course, the Celanese case is more than dictum. The Celanese case [fol. 6890] holds that Section 7 does not apply to corporate mergers, but I think that this amendment in 1950 was to make it clear that the bill applies to mergers, and I can't read this language in any other way, and it is adopted by the Supreme Court in 1957 and followed by the Supreme Court.

Now if I may proceed, I would like to answer any further questions on this line, Your Honor.

The Court: Go ahead.

Mr. Reycraft: As I said, the Columbia Steel case did involve a cash purchase of assets. Now, it was about $8 million (a little over $8 million) that they paid for the assets of Consolidated. The United States Steel bought Consolidated's assets through its subsidiary, Columbia. If they had paid for it by any other means of payment it would still not be within Section 7 at that time, if it was solely a purchase of the underlying assets.

Consolidated, as a corporation, continued in existence after this purchase of its assets. It continued and I don't know to what extent it engaged in business or what the nature of its remaining assets were, but it was no merger; it did not acquire the stock or the share capital of Consolidated.

By way of reviewing the background (I know Your Honor is familiar with it but I would like to review the fact) [fol. 6891] the banks have taken the position that by merging they would be able to increase their deposits and their lendable funds in Philadelphia by attracting new banking business to Philadelphia banks, with the result that more money would be available to meet the needs of the economy of the Philadelphia area.

Now, they said that a substantial amount of banking business which rightfully belongs to Philadelphia, as they have expressed it, is now going to banks outside Philadelphia as a result of what are claimed to be the low lending limits of Philadelphia banks. In addition, the banks believe that Philadelphia National and Girard combined would have the necessary capital to improve their personnel, increase advertising, establish advisory departments, and better publicize the advantages to businessmen of establishing plants in the Philadelphia community, and that the present resources of the Philadelphia National and the Girard separately are not sufficient to accomplish these things. In addition, the banks expect to expand the operations of their Foreign Departments to secure a larger share of the banking business connected with the Port of Philadelphia, and perhaps most importantly from the emphasis which has been placed on the defendants' case, they think they will have to merge in order to compete better with New York banks, which even now are attempt-[fol. 6892] ing to expand, to get bigger.

Against these claimed benefits to the public the Government contends that the proposed merger would unreasonably restrain trade because it would eliminate all competition between the two banks; that the competition eliminated would be substantial; and that if approved the merger will tend toward monopoly in commercial banking in the four-county area in which the banks have their banking offices.

Now, I don't think there is any doubt that if the proposed merger violates the antitrust laws any claimed benefits arising from it would be irrelevant. Congress, when it enacted the antitrust laws, established a national policy that competition was the greatest regulator and greatest protector of the public interests and the national economy.

The national policy has been reaffirmed by the Supreme Court on numerous occasions and when Congress has determined to except any area of the economy from the antitrust laws it has done so specifically and it has done so in a way that couldn't be mistaken, and there are a number of cases which hold that these exemptions can not be inferred.

So, despite this principle which has been reaffirmed by the Supreme Court as recently as the Maryland and Virginia Milk case and the RCA case, which, of course, arose in this District, I would like to examine the claims of public [fol. 6893] benefit which have been made by the banks because it is our conviction that the antitrust laws and competition continue to be the most effective means of preserving the free-enterprise system and that the public interest is best served by the national policy of preserving and promoting competition rather than by the elimination of competition through merger or other types of restraint.

Now I would like to review the nature of the competition eliminated between the banks, and in doing so I would like to make reference to the Government's proposed findings of fact.

Finding 286 refers to the fact that Dr. Harris testified that there is presently substantially direct competition between the head offices of Philadelphia National and Girard, and that if this merger were approved this competition would be entirely eliminated. Your Honor knows far better than I that the head offices of these banks are directly across the street from each other and it would be hard to visualize a situation in which the competition was more direct.

But, as far as the business of the two banks is concerned, they have mutual or common account customers with deposit balances of over $10,000 or more and loan accounts of over $50,000 in the following amounts:

Their checking accounts, there are 392 common checking [fol. 6894] accounts. These are accounts where the same people have an account in both the Philadelphia National and the Girard and there is $163 million in those accounts at the Philadelphia National and over $100 million in the Girard.

With respect to loans, there are 67 loans to common

customers, over $48 million with Philadelphia National and over $43 million with the Girard.

Now, this shows that they serve the same type of customers and that they are in substantial direct competition.

There are tables that the defendants have put in concerning the locations of their branches. Some of these branches are in competition with each other and some are not.

Finding 308 indicates that in those branches which, within the defendants' own definition, are in competition with each other, that is, those within a mile of each other in the city and those within two miles of each other in the suburban counties, there are IPC deposits of $348 million in these branches in the Girard and $352 million of IPC deposits in these branches of the Philadelphia National.

There are $123 million in loans in the Girard branches and $286 million in the branches of the Philadelphia; and these are in branches which are in admitted competition between the two branches.

[fol. 6895] Now, Dr. Harris also testified that the branches of the banks are in direct competition for all banking business involving loans of $50,000 and over, so that these limitations on the geographic areas served by the branches of one mile in the case of the city branches and two miles in the case of the suburban branches affect largely the smaller depositors and the smaller borrowers who will undoubtedly go to a banking office which is convenient to them. But when you get into the area of larger loans to business, as Prof. Harris testified, $50,000 and over, they are all in competition and anybody located in the local area could go to any of these branches for such a loan.

With respect to real-estate loans, in September of 1960 the Philadelphia National had $47 million in real-estate loans and the Girard had about $28 million and they compete actively and directly for loans of this type.

With respect to trusts, the Philadelphia National has increased its trust business tremendously. It started in 1950 with no trust business; it now administers approximately $400 million in trust assets. Girard administers approximately $2¼ billion; so they are competing very actively and very vigorously, and Philadelphia National is competing very successfully in this new area of business

for it. Both banks act as trustees in administering pension [fol. 6896] and profit-sharing funds for corporations and they admittedly compete for this type of business. Mr. Potts testified to that.

Both banks, as far as trust business is concerned, depend upon the four-county area for more than 70 per cent of their personal-trust business, so they are in active direct competition for trust business in the four-county area.

Now, as far as demand deposits are concerned, as Your Honor knows, this is the most important category of deposits for any bank. They represented, as of June 15, 1960, 86.5 per cent of all the deposits of Philadelphia National and 80.6 per cent of all the deposits of Girard; and they compete actively for these demand deposits throughout the four-county area.

Now, the benefits claimed are principally the following:

The increased lending limit from $8 million for Philadelphia National to $15 million for the combined bank. At the present we have gone into this in so much detail that I hate to repeat it for Your Honor, but the two banks together can lend $14 million, separately, $8 million and $6 million. The only increase in the lending capacity of Philadelphia banks that will be available will be the $1 million [fol. 6897] which is going to be transferred from the undivided profits; and this, of course, can be accomplished without any merger, so the banks are not going to increase the lending capacity of Philadelphia banks. They are going to combine existing lending capacity, and we don't think that combining can be described as growth in any meaningful sense of the word. It is merely adding up what Philadelphia already has, the resources that are already available for Philadelphia.

Now, there were sixteen lines of credit (and I am referring now to Finding No. 475, Proposed Finding 475), as to which Philadelphia National has extended its maximum line of credit of $8 million as of the date of these exhibits; and of those borrowers, which are presumably among those that need loans the most, only ten of them had made average commercial loans of $1 million or more from Philadelphia National in 1960; six had made loans under $1 million; and ten had made no loans at all from

Philadelphia National. I misspoke. There are twenty-six rather than sixteen.

Now, of those companies on the exhibit, D-26, which is referred to, Mr. Brown testified that nine now have lines of credit with both the Philadelphia National and the Girard, so they are not going to be able to increase their maximum by any merger.

As of December 22, 1960, only two of the loans outstand-[fol. 6898] ing at Philadelphia National were at the lending limit of $8 million and Girard didn't have any loans outstanding as of that date at its lending limit. In the past five years Philadelphia National has had only five requests for loans in excess of its lending limit and in three of those cases they either gave participation to other banks, they arranged with those other banks so that the full amount requested was available.

Mr. Brown, when he testified here, couldn't recall any occasion in the past ten years in which his bank had to refuse a request for a loan because it was in excess of his lending limit, and apparently when one customer did make a request, apparently in Exhibit D-40, for a $7-million loan, they arranged a participation with another bank for $1 million.

The Court: Is that strange? Is that a strange phenomenon, that people who are borrowing up to $10 million would not know to the penny what the lending capacity of a bank is?

Mr. Reycraft: I think they probably would. Most of them probably would.

The Court: I don't think it is at all strange that they don't get the requests because the financial vice-president would know to the penny the lending capacity of every [fol. 6899] bank in his area.

Mr. Reycraft: Yes, I can understand that, Your Honor.

The Court: Of course. I place no significance on that.

Mr. Reycraft: Of course, I do think that the fact of those customers, as I have said, in Finding 475, who had Philadelphia National's maximum line of credit of $8 million, only ten of them had commercial average loans of $1 million or more from Philadelphia National.

The Court: That is average.

Mr. Reycraft: That's right.

The Court: We are talking about yearly average.

Mr. Reycraft: That's right. That's right.

The Court: All right.

Now, how about at different times during the year that they were up and down to the limit?

The ability to have that money for a few days might mean the difference between a transaction and not a transaction. Isn't that true?

Mr. Reycraft: It could.

The Court: Only for a few days.

Mr. Reycraft: But for a $1-million average over the year [fol. 6900] there would have to be very substantial ups and downs to make it go much beyond $3 million or $4 million, and I think the record probably shows this, but I can't refer to it precisely at this point.

The Court: I know.

Mr. Reycraft: But ten of them had no loans at all. Ten of the companies with maximum lines of credit had no loans at all, so no matter how you average that out you get no loans.

I think I have already said that these companies with the large lines of credit with the Philadelphia National, many of them, in fact, nine of them, also were among the twenty-seven customers at Girard with maximum lines of credit; so these customers already have the maximum facilities that these two banks can provide, except for this increment of $1 million which they can transfer anyway.

Also, as it was stated in the record, at page 3915 of the transcript, of 115 loans as to which the Philadelphia National Bank offered participation in 1959, none of them was offered because the loan requested was in excess of Philadelphia National Bank's lending limit.

I would agree with Your Honor, certainly, that the financial vice-presidents of these companies know the lending limits usually of the banks. It would not be unusual at all [fol. 6901] for them to request you to take your lending limit and try to arrange with some other bank for the overage; but apparently of the 115 loans in which participations were offered, none of them were for the reason that they were in excess of Philadelphia National's lending limit.

There was also testimony by Mr. McDowell to the extent that the higher lending limit of the proposed merged bank was an advantage to the bank, it would be an important

factor in the combined bank's efforts to attract the business of national customers away from other Philadelphia banks and that the bank intended to try to do this. Now, this would put the combined bank at a substantial competitive advantage over the remaining banks in the area.

The Court: Isn't it strange that the smaller banks came in and said, "We want this because we are going to get more business!"

Mr. Reycraft: Well, I think it is probably not too strange. Some of them were correspondents of the two banks.

I suppose in any situation where you would have a group of competitors it is not too difficult to find competitors who would rather have fewer people sharing the business and who might hope, possibly in vain, to get some dissatisfied customers. If you have fewer people sharing the business, [fol. 6902] why, maybe you are going to get more of it and maybe for a couple of these banks they will get a little more business; but for the national business, the bigger business, they are not going to get more of it.

If the banks are right in what they say about the need for the merger, about the fact that it is going to allow them to improve their services and improve the quality of their personnel, the quality of their personnel seems very high to me right now from what I can see, but if they are going to improve it even more over what it is, presumably, if it is going to help them get business, the smaller banks are not going to have this ability to have the same caliber personnel as the combined bank.

We have also heard the argument about the New York banks taking business away from Philadelphia and the only facts we have in the record on that which would show totals are those in the Federal Reserve study, which are set forth in Finding 573, which indicate that $113 million in loans to Philadelphia-based companies were outstanding as of October 5, 1955.

The Court: Yes.

Mr. Reycraft: Now, by comparison, presumably the reason for this (according to the argument) was that the Philadelphia banks' lending limit was not adequate to take [fol. 6903] care of these customers and therefore they went to New York; but you take a city like Los Angeles, where

the Bank of America has its offices, with the largest lending limit of any bank in the country, $55 million. New York banks had $218 million of business out of there.

Take Chicago, which has a bank with a lending limit of $27,500,000; they had $375 million of banking business there.

So that for national companies who are in very high categories of borrowing, even over $15 million, there are still going to be some of these companies that go to New York. The president of the Pennsylvania Power & Light Company, for example, and one or two of the oil companies testified that for some of their business they would go to New York in any event; so I don't know how much of this $113 million worth of business could be kept in Philadelphia. Maybe some of it could, but it wouldn't be, I submit, anywhere near all of it.

Now, the question of the line of commerce involved in the case, lines of commerce, analysis of lines of commerce under the Sherman Act and the Clayton Act involve similar considerations. Unlike the Section 2 cases where the question of power is raised, there is no question of the power of the combined banks over price. The Section 1 [fol. 6904] Sherman Act allegation charges that there is a substantial lessening of competition or an unreasonable elimination of competition between the two companies. In a monopoly case, on the other hand, such as the cellophane case, it is necessary to prove that the monopolist had the power to exclude competition where it desired to do so or the power to set its price without regard to competitors' prices; so that in the monopoly case the existence of each such substitute product or alternative service becomes significant in determining whether power over price exists.

As I have said, the charges in this case are the elimination of competition between the companies. They are in substantial direct competition and the charge is that that competition is going to be eliminated, not that they have power to set price without regard to their competitors' prices, and not that they have the power to exclude competition, although we do contend and we are satisfied that there is a tendency to monopoly or that there would be resulting from this merger in the area, in that other banks

would try to merge to catch up and you would have an increase in concentration.

The Court: Doesn't there have to come a point sometime that it is cut off? If it got down to one bank, everybody admits that.

[fol. 6905] Mr. Reycraft: I would think so.

The Court: But isn't it a question of reasonableness?

Mr. Reycraft: There is a question of the amount of competition eliminated, the time when the amount of competition eliminated becomes unreasonable.

I would say, for example, that if between these two banks they had $1 million or $2 million of direct competition, for example, suppose they are at opposite ends of the four-county area and further apart, and you could really show that they were not in direct competition except to a very minimal amount—I would say certainly the elimination of that competition wouldn't probably be unreasonable. It might have a tendency to monopoly in that it might encourage other banks to merge and it might encourage these same banks to merge.

But there is a point and nobody knows what it is, Your Honor. I would certainly not stand here and say that I could give any rule of thumb or any rule of any kind as to the point at which the elimination of competition becomes unreasonable and becomes a violation.

The Court: Whose duty is it to determine that?

Mr. Reycraft: The Court's, Your Honor.

The Court: I am afraid so; I am afraid that is correct.

[fol. 6906] Mr. Reycraft: I might say, Your Honor, while at the lower end of the spectrum where, as I have said, there might be $1 million or $2 million of direct competition, I wouldn't be contending here, Your Honor, that the competition eliminated is substantial.

But when you review the fact that these banks are directly across the street from each other, that they are admitted direct active competitors of each other; that they are both very fine banks, they are very strong banks, they have excellent personnel, you have to measure, I think, the amount of competition which now exists between them in terms of the type of business they do. Well, the common checking accounts, for example—there are hundreds of millions of dollars of common checking accounts; and the

same way with the loans, there are millions of dollars of business where they are in active direct competition.

The Court: Is there any explanation of why this suit was started and there have been merger upon merger upon merger all over the United States, and putting lending limits of $25 million and $50 million around; and the Government never moved?

Mr. Reycraft: Well, Your Honor——

[fol. 6907] The Court: If it applies to this case, it certainly applied then; and why?

Mr. Reycraft: I am glad you asked that.

The Court: Is there any explanation?

Mr. Reycraft: Well, in explanation I would say that since we left Your Honor at court here a few months ago, there was a merger in New York City between the Manufacturers Trust and the Hanover Bank, and the Department of Justice has filed suit in that case.

There was a merger between the Continental Illinois and the City Bank in Chicago.

The Court: Yes, but as I understand it, you started suit here the day after the Comptroller of the Currency approved the merger.

Mr. Reycraft: Yes, sir.

The Court: You permitted that one out in Chicago to go on until the night before the merger and you didn't do a thing about it—you, the Department of Justice.

Mr. Reycraft: Well,——

The Court: Now, it seems awfully strange to me that that situation exists.

Mr. Reycraft: Now I would like to give you the exact dates. I will give you the exact dates for the record, but we filed our suit in the Continental Illinois case a few days after the Comptroller's approval. It was a few days after [fol. 6908] the Comptroller's approval, and obviously those banks knew of our interest in the merger and I may say, Your Honor, that the reason for their haste in merging was to try to avoid the jurisdiction of the Court and to try to beat the Department to filing the case.

Now the same thing is true in the New York situation, where in the Manufacturers-Hanover case we filed a complaint two days after, not one day after.

The Court: We are talking about this year.

Mr. Reycraft: That is this year.

The Court: Now what happened in other years?

Mr. Reycraft: Other years?

The Court: Yes. What happened, because if the Sherman Act applies it applied 15 years ago and when this started five or ten years ago, the Department of Justice sat on its heels, never got up, and didn't do a thing about it. Then, suddenly, in a relatively small situation, they file a suit here.

Mr. Reycraft: Well, I cannot, of course, explain to Your Honor why other suits were not started earlier than during this current year.

The Court: Naturally; you weren't even in the Department.

Mr. Reycraft: Well, I am afraid I was, Your Honor.

[fol. 6909] The Court: Were you?

Mr. Reycraft: I am not in a position and was not then in a position to be able to tell Your Honor with any certainty as to what the reasons were, but I was there and I might say there was some disagreement about it at the time.

As I said, we don't contend in this case that there is going to be a complete monopoly in commercial banking in Philadelphia, but we do think the tendency to monopoly result would be clear. You don't need, I don't think, in proving a tendency-to-monopoly case, to consider all the substitute services which might be available; all you need to show is, once there is a line of commerce, that there is a tendency to monopoly in that line of commerce.

In the Supreme Court's opinion in the du Pont-General Motors case, the line of commerce in which the tendency to monopoly was found was automobile finishes, and fabrics. Now there may have been and there probably were other types of finishes and fabrics which might have been adapted for use in the automobile industry and might even be intended to be substitute products; but the Supreme Court found that these automobile finishes and fabrics had sufficient peculiar characteristics and uses in themselves that they were definable as a line of commerce.

[fol. 6910] So that the line of commerce can be quite narrow, as long as it has sufficient peculiarities and characteristics to distinguish it from all others.

The Court: Does that mean that it appeals to the idiosyncrasies of a single Judge?

Mr. Reycraft: I wouldn't be able to say that, Your Honor.

The Court: Go ahead.

Mr. Reycraft: In the du Pont cellophane case, on the other hand, the Supreme Court did consider substitute products because the issue in that case was a monopolization, the power to price and the power to exclude competition. If you are talking about issues which involve the power of a monopolist to raise his price without regard to competition, then you have to look at the kinds of products that might come in that might affect his power over that price.

In the du Pont cellophane case the Supreme Court, and the defendant's brief in that case, said that cellophane was a part of trade or commerce which could be monopolized; that it was a monopolizable part of trade and commerce within the meaning of the statute, but what they found, however, was that du Pont did not have monopoly power over that part of trade or commerce because of these other substitutes. They even went so far as to take in brown [fol. 6911] wrapping paper, to say that it was a sufficient substitute that it affected du Pont's power over price.

In a case of that type, that case went rather far in considering substitute products, but it is a factual matter as to the degree of power over price; whereas in a Section 7 case and the Section 1 Sherman Act case substitute products are not relevant once the line of commerce is determined.

In the recent Crown Zellerbach case in the Ninth Circuit, the Ninth Circuit said that in the phrase "In any line of commerce" the words entitled to emphasis are "any line of commerce;" that is, if in one out of all of the lines of commerce there is an anticompetitive effect, that is sufficient to literally meet the test of the statute.

As early as 1929, in the Van Camp case, the Supreme Court said, "If the forbidden effect or tendency is produced in one out of all the various lines of commerce, the words 'in any line of commerce' literally are satisfied."

In the Columbia Steel case, and this was a Section 1 Sherman Act case involving a merger in which the anti-

competitive effects claimed were primarily vertical rather than horizontal, the lines of commerce were fabricated structural steel products, all rolled steel products, and pipe, and there wasn't any analysis so far as I am able to [fol. 6912] find of substitute products in that case because it was a Section 1 Sherman Act case involving a merger rather than a monopolization, and as far as the importance of the market foreclosed in the Columbia Steel case I think the fact that the United States Steel, through Columbia, paid just a little over $8 million for the assets of Consolidated, there wasn't an extremely large market that was being foreclosed.

By way of comparison, I believe the market value of the assets of the Girard at the present time range around $91 million as of the last date for which those figures appear in the last record. It runs $91 million and probably a little more at the present time.

The Court: Did you say the assets of it?

Mr. Reycraft: The value of the assets, not the deposits. The deposits are over $700 million; but the underlying capital, the capital structure of the bank, the physical assets, the fair market value of the stock, that is, if you take all the shares of stock at their market value and add them all up, you get about $91 million.

The Court: What do you do when you add up the assets against the shares of stock? The shares of stock only represent assets. What are the assets worth?

Mr. Reycraft: Many of them are deposits which are owed to the customers and for that reason they are not [fol. 6913] worth as much as assets which are not owed to somebody.

The Court: All right.

Mr. Reycraft: As applied to this case we think it is clear that regardless of the amount of competition which commercial banks might receive from other financial institutions in some lines, commercial banking is a line of commerce and that both economic and geographic market analysis based on commercial banking, is the appropriate take-off point; but the type of competition which is received by commercial banks from other financial institutions is such that they simply do not provide an adequate substitute for the services that a commercial bank can

render. I would like to look at some of these, some of the peculiar characteristics that commercial banks have which do, I am genuinely convinced, make them a line of commerce within the Clayton Act and the Sherman Act.

They are the only financial institutions which have the ability to create demand deposits.

They are the only financial institutions which are permitted by the law to accept demand deposits. They are the channel through which most of the currency in circulation finds its way into the economy.

They administer our economic system of payments by paying and clearing checks, and I think it is obvious [fol. 6914] that no business with sales of more than a few thousand dollars a year can operate effectively without a checking account. There is some discussion in this case about postal money orders and that sort of thing, but I think that hardly is entitled to serious consideration as a means by which you can operate any kind of a business.

Commercial banks are also the most important source of commercial and industrial loans. They are the most important source of loans to individuals, and they are virtually the only source of loans to most individuals at reasonable rates.

Commercial banks are also unique in the function they perform as the department stores for business. They provide a variety and range of services which are available collectively from no other financial institution.

The Federal Reserve System itself was established to administer commercial banks, so that this, in itself, distinguishes commercial banks from other financial institutions.

Now, as the defendants themselves expressed it in their brief on page 46, consideration must be given to "The peculiarities of the banking business which distinguish it from all others." It is certainly true that commercial banking has pecularities that distinguish it from all other business.

[fol. 6915] In the Trans-America case in about 1948 the line of commerce involved was commercial banking, and the opinion of the Court in that case was based upon the assumption that commercial banking was the appropriate line of commerce, and the opinion does not indicate that

any serious question was raised about commercial banking being the appropriate line of commerce, so that issue is not one that is really novel in this case.

This case is first under the particular circumstances, but as to the question of the line of commerce, I think one can say it is resolved in the Trans-America case; and the Clayton Act itself, by referring to bank acquisitions specifically, I think, recognizes that the banks are a line of commerce which is entitled to be protected within the meaning of the Act.

Indeed, some of the findings that the defendants have proposed, 9 through 43, support our claim that commercial banks are unique in many respects. Commercial and industrial loans are, we believe, a separate line of commerce of part of trade or commerce. The importance of commercial loans, commercial and industrial loans, of the commercial banks, is illustrated by the fact that for Philadelphia National about 57 per cent of all their loans in 1960 are commercial and industrial, and for Girard about 49 per cent.

[fol. 6916] Professor Harris testified that financial institutions other than commercial banks cannot readily supply the commercial loans needed by businessmen and that unsecured short term commercial loans are readily available to Philadelphia businessmen only from commercial banks.

Well, in Philadelphia there are about 35,000 retail establishments. There are about 6100 industrial concerns and 5900 wholesale establishments. With very few exceptions, all these businessmen require the services of commercial banks in Philadelphia for borrowing requirements, and this is by far the overwhelming numerical majority of the Philadelphia business population, and not the few businesses, some of whom are located here, I understand, who need more than a million dollars in loans and who do have access to banks in other cities.

Dr. Harris testified that there is very little competition for commercial banks from other financial institutions for loans under $50,000. As far as installment loans to individuals are concerned, the interest rates that are available from commercial banks certainly distinguish them from the lending business available from other financial institutions.

In fact, loan companies themselves are able to borrow from commercial banks at commercial bank rates and re-lend at prices at which they make a profit.

[fol. 6917] Dr. Harris testified that the percentage of total single-payment loans to individuals from sources other than commercial banks is insignificant.

Now, as far as real estate loans are concerned, I would like to refer to the Federal statute on Federal savings and loan associations, which is in 12 U.S.C.A. 1464:

Federal savings and loan associations may lend up to $35,000 on first liens on homes or combination of homes and business property within 50 miles of the main office and further with permission of the authorities. They can lend up to 20 per cent of the assets for first-lien loans without any restriction. An additional 20 per cent may be used in making or purchasing interests in first liens on one to four-family homes, but the last two categories together may not exceed 30 per cent. That is, the unrestricted part and the part up to four-family homes can't exceed 30 per cent of their assets; and up to 15 per cent of their assets can be used for loans up to $3500 for property alterations and repairs.

The Court. $3500?

Mr. Reycraft: $3500, yes, sir, and a limited amount for land when it is related to residential use; and the Pennsylvania statute on building and loan associations, which is in Pudon's Pennsylvania Statutes, No. 15, Section 1074-[fol. 6918] 903, says that a state savings and loan association is required to primarily confine its mortgage lending to loans secured by residential real property used as a dwelling for not more than four families; and 15 per cent of the total assets may be used for mortgage loans up to certain stated percentages of the value of five or six-family residences.

So both Federal and State savings and loans concentrate primarily on residential mortgages and they are not effective competitors in the larger mortgages which are needed, for example, for building an industrial plant or building anything really beyond a residential property.

The geographic area of primary competition between the two banks can be measured, I think, with a considerable degree of certainty.

By state law, as Your Honor knows, the two banks can have bank officers only in the four counties of Philadelphia, Bucks, Delaware, and Montgomery. The defendant's brief seems to suggest that the four-county area is something that the Government thought of so that the percentage would be higher than if they used the ten-county area or the whole northeastern United States or some other area that they claim might be appropriate, but it seemed perfectly obvious to us that the very foundation of a bank's business is in the area where it does have its banking offices. [fol. 6919] They contended, on the one hand, as far as their branches are concerned, they are really only drawing business from an area within one or two miles, and this applies, I suppose, to most of their branches, and within the city they say one mile, and in the suburbs they say two miles.

No doubt the head offices, which have about a third of the bank's business in each case, have a wider area of possible lending and deposit activities, but the fact that all of their offices are in the four-county area establishes the real foundation for the bank's business.

Now, we don't dispute the fact that the two banks compete for some business in Camden and that they compete for some types of banking business beyond the four-county area in Pennsylvania and other places in New Jersey and Delaware. We think they do to some extent compete in those areas. I think they probably compete for correspondent banking business that originates in Paris and London and Rome perhaps in some degree; but I would like to review their own figures, and these are their own exhibits, which show what the most relevant and the most important source of business is for each of them, and they are not theoretical figures and they don't require any kind of theoretical economic analysis to show what their importance is, because the facts of business life are that the most im- [fol. 6920] portant area of your business is the place where you get the most business and where you make the greatest profits, and these figures are set forth in our findings, which reproduce many of the defendant's exhibits; and No. 258 shows that for commercial and industrial loans under $50,000 the Philadelphia National has 75 per cent of its loans originating in the four-county area.

Now, suppose the area they selected was the ten-county area, which they claimed at various times, there is only 4 per cent of their business of this type that originates beyond the four counties and within the ten counties. In the northeast U.S. about 21 per cent comes. So there is business of this type outside the ten-county area.

For loans between $50,000 and $100,000 74 per cent originates in the four-county area and only 5 per cent in the remainder of the ten-county area, and small amounts in other of these categories they use, such as the rest of the Third Federal Reserve District and the rest of the U.S.

Over-all, in fact, it isn't until you get to loans of over a million dollars, that the percentages of business which originates within the four-county area gets below 50 per cent, and for all of their commercial and industrial loans [fol. 6921] of Philadelphia National, 54 per cent originates within the four-county area, and this, it seems to me, just by simple logic, is the most important area of the country.

For the Girard, 67 per cent of their loans under $50,000 originate in the four-county area, 74 per cent between $50,000 and $100,000; 69 per cent between $100,000 and $500,000; 55 per cent between $500,000 and $1,000,000; and even over a million for the Girard, 56 per cent originate within the four-county area, and over-all 63 per cent of their total business, total commercial and industrial loan business, originates within the four-county area; and with the two banks combined, 57 per cent of the combined business would originate within the four-county area.

Now, if you take Dr. Harris' statement that all business over $50,000, all loan business over $50,000, the area of competition is all of these banks within the area, there is competition I think across the board for virtually all of this commercial and industrial loan business over $50,000.

Now take the loans to individuals, and you get an even greater percentage originating in the four-county area. In the case of the Girard, 70 per cent originates within the [fol. 6922] four-county area; in the case of the Philadelphia National 75 per cent; and the combined banks would have 72 per cent originating within the four-county area.

Real estate loans, all together 74 per cent originate within the four-county area for Philadelphia National and 84 per cent for Girard, and combined it would be 78 per cent.

For lines of credit of $50,000 or more, by number, in the four-county area, for Philadelphia National, 58.3 per cent, and for Girard by number 60.6 per cent.

For personal trust business, I think I have already said that 72.3 per cent of Girard's business originates in the four-county area and 94 per cent of Philadelphia National's originates in the four-county area.

Time and savings deposits, 96 per cent of the combined bank's time and savings deposits originates in the four-county area; and for time deposits of partnerships and corporations, 67.6 per cent; for time deposits of domestic banks, 89 per cent; for time deposits of states, 94 per cent.

Now, for demand deposits, which, as I have said several times, is the most important category for commercial banks, under $10,000, 99 per cent of all the demand deposits of the Philadelphia National Bank originate within the four-county area; from $10,000 to $50,000, 79 per cent; from [fol. 6923] $50,000 to $100,000, 65 per cent; from $100,000 to $500,000, 58 per cent; and even over $500,000, 63 per cent originate within the four-county area, so that over-all 66 per cent of the total demand deposits of Philadelphia National originate within the four-county area, and as has been true with the other categories, as far as Girard is concerned, an even greater percentage originates within the four-county area—90 per cent under $10,000, 86 per cent between $10,000 and $50,000, 81 per cent between $30,000 and $100,000, 71 per cent between $100,000 and $500,000, and 76 per cent over $500,000, so that 78 per cent of all of its business in this category originates within the four-county area.

Of course, in these categories, as in the other categories, there is business outside the four-county area. There is some business in Camden; there is some business perhaps in Wilmington, Delaware. I don't know, perhaps in other places in New Jersey, and they are competing for this business. I don't see how there can be any doubt about the fact that the most important and the most relevant area of competition between these two banks is in these four counties.

Now, as far as the relative size of the two banks compared with other banks in the area, Your Honor knows [fol. 6924] quite well that the proposed merger would put

the Philadelphia combined bank about 50 per cent ahead of the First Pennsylvania in terms of assets and deposits and loans. The combined bank would hold about 39.2 per cent of the total assets of all commercial banks with head offices in Philadelphia and 35.7 per cent of the total assets of all commercial banks with head offices in the four-county area. It would have 34 per cent of all the loans of all commercial banks with head offices in the four-county area, and it would have 42 per cent of the commercial and industrial loans of all commercial banks with head offices in Philadelphia and more than 40 per cent of such loans of all commercial banks with head offices in the four-county area. They would have about 35.8 per cent of the total deposits of all commercial banks with head offices in the four-county area.

By comparison, the next three largest banks would have 22.1 per cent, 9.9 per cent, and 9.3 per cent respectively.

When we get past the five largest banks in Philadelphia after the proposed merger, all 38 of the remaining banks in the four counties would have divided up between them only 22.9 per cent of the total deposits of all commercial banks with head offices in the four-county area. They would have 37.6 per cent of all the time deposits of banks with [fol. 6925] head offices in Philadelphia and 29.9 per cent of such deposits of all commercial banks with head offices in the four-county area.

In demand deposits they would have 39.2 per cent of the total demand deposits and 36.6 per cent of such deposits of all commercial banks with head offices in the four county area.

Now, Your Honor has anticipated my argument on Section 7, and I think I have stated my position on it as well as I can, and I believe that the Supreme Court's opinion in the duPont case makes it quite clear that the purpose of the 1950 amendment was to make it clear that the bill applies to all types of mergers and acquisitions, vertical and conglomerate as well as horizontal, and this despite the fact that the Federal Trade Commission had advised Congress on a number of occasions that it did not apply to vertical acquisitions. Congress said and the Supreme Court said that these are matters to be determined in the courts and not by administrative determination.

I might say that recently, within the past two years, the

Department of Justice—and I should have mentioned this earlier in answer to Your Honor's question—the Department of Justice did file a complaint against the Firstamerica Corporation when it acquired the California bank in [fol. 6926] California. That matter has been submitted to the Federal Reserve Board for determination under the Bank Holding Company Act. The Federal Reserve Board said that the acquisition would not be in violation of the Bank Holding Company Act. It said also that in the Board's opinion the acquisition would not violate Section 7 of the Clayton Act.

Thereafter the Attorney General, and I should say this was two years ago when this case was filed, filed suit in California under both Section 7 of the Clayton Act and Section 1 of the Sherman Act, just as the charges in this case are alleged. That was a bank holding company acquisition rather than a merger as described here.

The defendants in the Firstamerica case moved to dismiss the complaint on the ground that the Federal Reserve Board had exclusive jurisdiction, that the Attorney General was collaterally estopped and the matter was res judicata under the Bank Holding Company Act and under the Clayton Act, I should say, since the Federal Reserve Board expressed the opinion that it wouldn't violate the Clayton Act, and, of course, the Federal Reserve Board does have authority to enforce the Clayton Act as far as it applies to bank acquisitions and mergers.

Despite that the District Court denied the motion to dis- [fol. 6927] miss. The defendants immediately made application for leave to file a petition for writ of certiorari in the Supreme Court, and after several months the Supreme Court denied the petition, so that these arguments about the bank regulatory agency having primary or exclusive jurisidiction have been made before, they have been presented to the Supreme Court, and, of course, if there had been any legal basis for this argument, it would have been certainly the logical——

The Court: Haven't you heard Mr. Justice Frankfurter's

Mr. Reycraft: I know exactly what you are going to say, Your Honor.

The Court: The denial of writ of certiorari means nothing.

Mr. Reycraft: We found it very encouraging at the time.

The Court: It is to the litigant, but it is no precedent for any District Court to follow.

Mr. Reycraft: I understand that, Your Honor. I might say, however, that the District Court ruling on the matter in California was considering all the merits and entered an order and it is a holding on these issues.

The Court: And it is in the books.

[fol. 6928] Mr. Reycraft: Yes, sir. I should say there is no opinion. That is an order. It is without an opinion.

Before the Firstamerica case the Federal Reserve Board had brought the Transamerica case, involving acquisitions by Transamerica of the stock of banks, and the Federal Reserve Board lost that case because it failed to show the area of competition. It found on the one hand that the competition was primarily local, and the charge, I think, was that the elimination of competition was over a much broader area, but as far as the application of the Clayton Act to bank acquisitions, the opinion made it clear that it did apply.

As far as Section 1 of the Sherman Act is concerned, in the Columbia Steel case itself, which held against the Government, the Court said that the policy of the Clayton Act is to be applied to Sherman Section 1 acquisitions mergers, and as far as the effect of this policy, that is the concrete application in the Columbia Steel case. If one thing is clear, it is that both between Columbia Steel and the Celanese case these were the two prime motives which led Congress to amend Section 7 to make it clear, as the Supreme Court has said in the duPont case, quoting the House report on the amendment, that Section 7 applies, and this is the old Section 7, applies to all acquisitions and mergers of vertical and conglomerate as well as horizontal.

[fol. 6929] Now, some of the statements in the defendant's briefs suggest that they think that the merger does not involve a restraint of trade, and I think I should comment on that.

For example, suppose that the Philadelphia National Bank and the Girard Trust Corn Exchange Bank were to get together and for a period of as long as six months they

were to say, "Well, now, we are going to stop competing on interest rates. We are going to charge the same type of interest rates for these various types of loans—for installment loans, for general commercial and industrial loans. We are going to pay the same interest rate on time deposits. You stay out of Bucks County and I will stay out of Delaware County, and we will divide Montgomery County up the middle, and you take these customers and I will take those customers."

There isn't anybody, I would think, who would contend that this type of agreement would not restrain trade; and, indeed, this type of agreement would be several per se offenses, because restraints of this type have been found to be so pernicious in their effects on competition that no type of defense or argument as to their reasonableness or as to their good, what help they are going to be for the area, or what help they are going to be for the banks, would be [fol. 6930] allowed.

Now, a merger of this size and this type is going to eliminate all competition of this type between these banks for all time, so that it surely restrains trade. As Your Honor has pointed out, the problem of finding that exact point in the amount of competition and trade restraint at which it becomes a violation is a difficult one, but I think that when you have the quantity of competition which is involved in this case, the fact that it originates in this area, where there is substantial direct competition between them, I think it is so far beyond the threshold where an unreasonable restraint would exist that there is no serious factual question that it is an unreasonable restraint of trade.

The Bank Merger Act of 1960, as Your Honor knows, said that the bank regulatory agencies—the Comptroller of the Currency in cases involving national banks; the Federal Reserve Board in cases involving state banks, or where a national bank merges with a state bank, or two state banks merge; and the Federal Deposit Insurance Corporation where there are non-member banks or non-national banks—should have to pass upon bank mergers.

The Court: Have you any idea why Congress gave it to four different people to pass on or to talk about? Can you [fol. 6931] find anything in here (indicating) that will tell me why? Do you see what I am holding in my hand? All of the proceedings before Congress.

Mr. Reycraft: Well, I think there probably are better ways to do it. There is no doubt that the regulatory agencies themselves have been applying different standards. In this very case Your Honor has copies of the Federal Reserve Board report and the Federal Deposit Insurance Corporation's report and the Comptroller of the Currency's conclusions.

The Court: Might I suggest this to you: Maybe Congress was going to bring into being and show to the Court the faceless expertise that we have been having to depend on for so many years and bring it out into the open. Do you think in a droll way Congress intended that?

Mr. Reycraft: I am not sure I understand that.

The Court: We of the court have to depend on the expertise, say, of the Securities & Exchange Commission, the I.C.C., different regulatory agencies. We always talk about their expertise.

Mr. Reycraft: And we found that experts don't always agree.

The Court: Well, we also find we don't know who they are.

[fol. 6932] Mr. Reycraft: True.

The Court: And was it Congress' intention, by starting a fight among them, to force them to come to the Court and expose themselves?

Mr. Reycraft: I think the Congress has illustrated perhaps unwittingly the fact—and I admit to considerable prejudice here—that only through the Courts can we have a uniform system of law and have standards applied equally to all people, and I think whether the bank is a national bank or a state bank should not be an advantage or a disadvantage as to what actions they can take. Certainly if expertise is expertise, it ought to come up with some kind of uniform result, and under the present statutory scheme that the Bank Merger Act of 1960 has engendered, the only way that this type of uniformity can come is through the Courts, I am convinced.

Your Honor has referred to the expertise of such agencies as the I.C.C. and some of the others.

The Court: Let's talk about the Federal Reserve Board. Let's talk about the Federal Deposit Insurance Corpora-

tion. They are rather young upstarts when you compare them with the Comptroller of the Currency, aren't they?

Mr. Reycraft: Compared to the Comptroller of the Currency they are an upstart.

[fol. 6933] I think that the real deficiency in this type of expert determination of these matters is shown—and I hope I will be forgiven for saying this—in the type of opinion that is given by the regulatory agency. There are no findings of fact of the type that a Court must make. There is no analysis of the reasons. There are some conclusions stated, but no Court is going to decide a matter of this type by merely saying, "Well, it is my conclusion that all the ultimate facts to which the issues are directed are resolved in favor of the applicant."

There is no review of this type of determination in the Courts unless there is an arbitrary and capricious determination, but the aggrieved parties have no right to appeal. There are no hearings. The matter is decided solely on whatever application is submitted, and, of course, there is a form of application which requires certain types of information to be submitted, but I would respectfully suggest that the types of determinations which are issued by these regulatory agencies cannot be analyzed in any rational way by any attorney.

The Court: You say that they are entitled to their opinion as experts, however, in your brief. You say it is expert opinion.

Mr. Reycraft: I do say that, and what I say, Your Honor, [fol. 6934] to the extent that the analysis and the facts on which they are based supports the expert opinion, I would say the Federal Reserve Board's report goes into considerable detail. Now, if they explain the basis for their expert conclusion, then the Court can review the matter and say, "This makes sense."

Experts are not so expert that lawyers and Courts say, "I can't understand this kind of thing," but I say there is no way of applying this type of analysis to the opinion or the order that the Comptroller issued. There is no way that you can analyze this type of thing. So I would say that, as an expert opinion on the competitive consequences, and certainly on the elimination of competition, it is entitled to very little weight—very little weight—and I would

say the Federal Reserve Board report, because it does go into detail, it does analyze the merger in terms of the line of commerce, in terms of the amount of direct competition between the banks, in terms of the disproportion, the increasing concentration—I would say that this report is entitled to considerable weight just because it does go into this detail.

I have a little more, Your Honor, if you would like to take a recess at this point, but I can continue.

The Court: How much longer will you be?

[fol. 6935] Mr. Reycraft: Ten minutes, perhaps.

The Court: All right, then we will take the recess later. Continue.

If you want it at this time, you are welcome to it.

Mr. Reycraft: My throat is a little dry.

The Court: All right, we will take a ten-minute recess at this time.

(A ten-minute recess was taken at 11:22 A.M.)

Mr. Reycraft: Your Honor referred to the questions of expertese in this case, in these matters, and I think I should refer to the fact that there are seven experts that sit on the Federal Reserve Board, although they may be more recent than the other agencies, and there are three on the Federal Deposit Insurance Corporation, including the Comptroller of the Currency, so that he is one of the three officials who approved the report of the Federal Deposit Insurance Corporation.

The Court: He approved the Federal Deposit Insurance Corporation report?

Mr. Reycraft: I say he is one of the three officials who voted on it. Now, what he said or did, I don't know, but I know that at least two out of the three approved it.

[fol. 6936] The Court: I would hardly expect that he would subscribe to it.

Mr. Reycraft: At least two of the three did, and at least, I suppose, four out of the seven members of the Federal Reserve Board. We have no knowledge of how the vote, if any, came out on that.

I thought I might review these reports, but I know Your Honor is familiar with them, and I won't do that.

It seems to have been one of the cornerstones of the de-

fense in this case that if the proposed merger should take place, it wouldn't make any difference, because there are other cities in which there are banks which have a larger percentage of the share of commercial banking business than would be the case in Philadelphia even after the merger; and it almost seems that it has been contended that Philadelphia is entitled to have as much banking concentration as some of these other cities, that if banking is concentrated in Chicago or Los Angeles, Philadelphia is entitled to have concentrated banking too, so that if Los Angeles has 50 per cent of the banking assets in one bank in the city, I suppose they think that Philadelphia is entitled to the same.

This would mean that even after the merger in this case, [fol. 6937] if it should be approved, there would have to be other mergers, if they are really going to keep up and keep in step with banks in other cities which have 50 per cent of the assets or the deposits.

Maybe this would mean that Provident Tradesmen's or Fidelity-Philadelphia would have to be acquired in order to meet this goal, and if they are really going to keep in step and maybe get in front, they might have to acquire both these banks.

It seems to me to be a rather peculiar form of pride that has as its goal the elimination of competition in what is presently a relatively sound and competitive, relatively competitive, banking system, and it seems to me that this goal is the antithesis of our national policy of favoring competition and the preservation of free enterprise through competition. It doesn't seem to me to be the philosophy of a great and expanding economy in which Philadelphia and the Delaware Valley are going to move ahead by competing and by attracting new capital into the Philadelphia banking system.

The Court: They say just the opposite. They say that what you are trying to do is put a stranglehold on competition.

[fol. 6938] Mr. Reveraft: That is what they say. They say that we are trying to put a stranglehold on competition by preventing them from merging, eliminating all competition between them——

The Court: They say that they can't get business, that they can't get into a position that you, the Department of Justice, have permitted to exist in other places. They say if it is all right there, it is all right here. I don't see that it is an illogical argument. You say they are eliminating competition among themselves. They say that you are preventing them from going out and competing.

Mr. Reycraft: At the present time we are trying to prevent increased concentration in New York through the Manufacturers-Hanover suit and the same thing in Chicago through the Continental-Illinois suit; and I think that whatever can be said about the Department's policies in the past, a consistent, rational policy is being applied to these mergers, as far as we are concerned, and we do think that it certainly would be unfair to proceed in Philadelphia and not to proceed in other areas where substantial competition is also being eliminated, and we certainly are following that policy at the present time.

But it seems to me, Your Honor, even accepting many of the arguments that the defendants have made, if the way [fol. 6939] they are going to increase competition, which is what they say they are going to do, is to increase lending limits and go out and bring new business into Philadelphia, or keep business that is already here in Philadelphia, the way to do it is fairly simple. It may take a little longer, but it is fairly simple. Within the past few weeks—I know that Your Honor would know this—the First Pennsylvania Company has taken steps to raise its lending limit to $10 million from about 7½, and they are doing it by selling stock, and apparently they are doing it without any adverse effect on their stockholders, and they are bringing new capital into the Philadelphia banking system. They are not merely adding up existing assets. They are bringing new capital. They are raising the total aggregate lending limit of Philadelphia banks by going out and selling stock and bringing this new capital in. They are raising their own lending limit by a third through this means. They have done it without eliminating any competition, as far as I can tell, and if it will result in increasing competition in the Philadelphia banking area, this seems to me to be the way to do it.

The Broad Street Trust Company is even smaller, far

smaller than either the Girard or the Philadelphia National. They have also announced steps to increase their lending limit to 21/2 million by selling additional stock.

[fol. 6940] The Court: You are talking about the non-member of the Federal Reserve, aren't you, the Broad Street Trust?

Mr. Reycraft: Board Street Trust, yes, sir.

The Court: A non-member of the Federal Reserve.

Mr. Reycraft: I don't recall whether it is or not.

The Court: I do.

Mr. Reycraft: I do now recall. I recall Mr. Horan's testimony.

The Court: You and the Chairman of the Board of the Broad Street Trust had quite a spirited exchange.

Mr. Reycraft: It is quite clear to me now, yes, sir.

Mr. Horan, who is a very aggressive person and a very active man has taken steps to increase the lending limit of his bank, and he is doing it by selling stock.

Suppose, though, that the First Pennsylvania had decided to follow the same route that the Philadelphia National and the Girard want to follow. Suppose they would say, "We have to increase our lending limit, or we want to," for whatever reason, and they decided, "Well, Broad Street Trust looks like just about the right size, just the amount [fol. 6941] we want to increase," and they go out and acquire Broad Street Trust.

Well, they end up in the same place. They have a $10 million lending limit, and you might say, what is the difference? Well, the difference is that they have eliminated a very important and aggressive competitor in the Philadelphia area, and Philadelphia would lose the services of a man like Mr. Horan, who, I am sure, provides a real stimulus to commercial banking in the Philadelphia area. He wouldn't be president of that bank any more.

Or suppose they had acquired the Central-Penn Bank and done the same thing. Mr. Sienkiewicz wouldn't be president of an independent bank any more. And I submit that the loss of banks of that type and the loss of their personnel and their independent decision-making process in this area would be a great loss.

But they didn't do it that way. They did it by selling stock, and they are in the same position, as far as being

able to serve Philadelphia and being able to attract additional business to Philadelphia, if it is going to be done by increasing the lending limit.

I submit also, Your Honor, if this merger between Philadelphia National and the Girard is permitted in this area, there is not going to be any bar to further mergers in this [fol. 6942] area till you end up with a situation where you have maybe three banks in the Philadelphia area.

Judge Weinfeld in the Bethlehem Steel case expressed it this way: Bethlehem and Youngstown wanted to merge to compete with U.S. Steel. He said, "You have a big 12 now in the steel industry, and if you permitted this merger you would end up with a big 2 or a big 3, because everybody else would want to get in line.

And so you have these two big banks who want to merge in order to be able to compete. What is wrong with the Broad Street Trust and Provident Tradesmen's merging? What is wrong with Central-Penn merging. If all these things are really going to help Philadelphia, why can't we do the same thing?

I don't think Your Honor wants to see a banking system in Philadelphia where you end up with three or four banks, and that is exactly where it would lead to.

The Court: Maybe Philadelphia would like to work out their own destiny without somebody coming in from the outside and telling them what they should do.

Mr. Reycraft: If what you are saying, Your Honor, is that they should have——

The Court: I am talking about the pride of Philadelphia. [fol. 6943] Mr. Reycraft: I understand that. I understand it very well, Your Honor, and I am very much aware of it, but I think some other cities of Philadelphia wanted to do that in the electrical equipment, too.

The Court: I got a couple of letters from people in Philadelphia, and, strangely enough, the complaint was against the Central-Penn, your only witness, that they merged with some other bank and they lost a vice-president, and this person was terribly disturbed because he didn't know the new vice-president and couldn't go up and get $500 or $600 every time he wanted it. So that is the only complaint I had against an individual bank in Philadelphia.

I have had some other fan letters from around the country too.

Mr. Reycraft: I don't doubt that, but it seems to me that if the Court does see this case as being the means by which the Philadelphia economy can best be promoted and expanded, it can best be promoted and expanded by encouraging banks to increase their size and their capital by bringing new capital in and not by eliminating existing competition; and it seems to me this is the way Philadelphia is going to grow and expand, and not by eliminating what are presently very substantial and competitive banks.
[fol. 6944] Thank you.

The Court: Very well.

It is clear that we can't finish this morning, and I don't intend to go through.

Mr. Littleton: You can finish with me this morning, sir.

The Court: All right.

ARGUMENT BY MR. LITTLETON

Mr. Littleton: If Your Honor please, I think that I should be less than gracious if I didn't at the outset of my argument acknowledge with gratitude the very complimentary things which Mr. Reycraft has said about the management and the operation and the structure of the Philadelphia National Bank, and perhaps I wouldn't even be presumptious if I acknowleged with gratitude the nice things he said about the Girard Trust. We think they are good, too. That is the reason we want to merge with them.

Your Honor, this is the first time that a Court has been called upon to determine, under the Bank Merger Act of 1960, whether the approval by the appropriate Federal banking agency, in this case the Comptroller of the Currency, of a merger of two banks, is the final and conclusive determination of the validity of such proposed merger under all Federal laws, and whether or not it precludes a review of the proposed merger under the laws alone.
[fol. 6945] It is our position that the action of the Comptroller, which is the act of an expert and responsible representative of the Executive Branch of the United States

Government, is decisive, and that Congress intended it so to be, and that Section I of the Sherman Antitrust Act, and more particularly Section 7 of the Clayton Act, have no application here.

My colleague Mr. Price will later discuss those three statutes, the Sherman Act, the Clayton Act, and the Bank Merger Act, and will, I think, demonstrate the inapplicability of the first two and the sole supremacy of the third to govern this situation; but if Your Honor will permit me, I would like to endeavor to show that the proposed merger will not violate the prohibitions of the Sherman Act even if that Act should be considered to be applicable to bank mergers.

After all, that is the way we tried this case. While holding to the opinion that the antitrust statutes have no application here, while we deplore the anomaly of one arm of the Executive Branch of the United States Government, the Department of Justice, castigating as conspiracy in restraint of trade that which another expert arm of the same Executive Branch of the Federal Government has found to be in [fol. 6946] the public interest and has therefore approved; and while waiting in vain for the Justice Department, if it is right as to the law, to meet or even to endeavor to try to meet the burden of proof which it must meet, that of producing a definite actual showing of illegality, we have nevertheless gone forward and we have adduced before Your Honor live testimony from the best qualified experts in every area of experience relevant to the issues involved in this merger.

Our witnesses have included executives from eight Philadelphia area banking institutions, representatives of large and small businesses located in the area, the Director of the Philadelphia Industrial Development Corporation, the President of the Philadelphia Chamber of Commerce, and the Mayor of Philadelphia.

[fol. 6947] In addition, we have produced testimony from two thoroughly qualified experts, Dr. Harris, an economist of distinction, a director of the Broad Street Trust Company, a former Director of Finance for the City of Philadelphia, and a member of the Pennsylvania Banking Board, who offered a unique combination of theoretical ability with

practical experience as applied to commercial banking in the Philadelphia area.

Also Mr. Lewellyn A. Jennings, who was formerly Assistant Chief National Bank Examiner assigned to the Third Federal Reserve District, this very district, and who subsequently was First Deputy Comptroller of the Currency. As such, he was and he is completely familiar with the functioning of the commercial banking system throughout the country, as well as in the Philadelphia area.

Your Honor has heard these witnesses express the opinion, based on their unique familiarity with banking and finance in Philadelphia and in the Delaware Valley, that the merger of the Philadelphia National Bank and the Girard Trust poses no danger and no threat to commercial bank competition; that the merged bank will be able to provide services which are needed but are not now available in the Philadelphia area; and that the merger will have beneficial effects on trade in Philadelphia and will thus be in the public interest, wherefore I am here prepared to argue that [fol. 6948] even if Section 1 of the Sherman Act is applicable to bank mergers, this merger of Philadelphia Bank and Girard will not be in violation of its prohibitions.

Section 1 of the Sherman Act prohibits unreasonable restraint—unreasonable restraint—on interstate trade or commerce and except in certain per se restrictive practices the economic benefit or wisdom of the action is relevant and is material.

These are the things which the Government seems to overlook—to warrant an injunction restraining an alleged violation of Section 1 there must be a definite factual showing of illegality under the Sherman Act. The test under the Clayton Act is satisfied if there is a reasonable probability that the effect of a proposed acquisition will be to substantially lessen competition or tend to create a monopoly.

It is quite obvious, and since it is quite obvious, that the standards and the burden of proof under the Clayton Act are more easily satisfied than are the requirements of Section 1 of the Sherman Act, the Antitrust Division contends that the Sherman Act must be applied in the light of the policy formulated later by the Clayton Act; and accordingly they restrict their factual presentation or argument

to an attempted showing of violation of the Clayton Act, [fol. 6949] and they do this in spite of a clause, if your Honor please, in the Times Picayune case with which Your Honor is familiar and which says (and they omit the part which I will read at the end)—the opinion says,

> "The Government at the outset elected to proceed not under the Clayton Act but the Sherman Act. While the Clayton Act's more specific standards illuminate the public policy which the Sherman Act was designed to subserve——"

And now here is the part they left out in their brief to you——

> ". . . the Government here must measure up to the criteria of the more stringent law."

Now the day before yesterday they filed a reply brief to our brief, and while we point out this omission in our brief they try to explain it away by saying that this clause is additional portions of the Times Picayune opinion.

Now I say to you that this clause which was omitted is not "additional portions of the Times Picayune opinion," but is a necessary and an integral part of the very sentence in the Court's opinion, and which sentence means that in an action brought by the Government under the Sherman Act the Government must measure up to the criteria of the [fol. 6950] Sherman Act, which is the more stringent law. It means just that and it is incomprehensible to us how the Department, in its reply brief, can say, as they do say, "Patently, the additional words cited by the defendant can have no such import." They have exactly that import; they have to measure up to the criteria of the Sherman Act.

But in any event, if we are to look in this case for evidence of subsequent legislative intent we should not stop with the Clayton Act; we should go ahead and bring it right down to date and consider the latest expression of Congress with respect to bank mergers, the Bank Merger Act of 1960. In this Congress has expressed its policy that bank mergers should be permitted if, after investigating all the factors enumerated therein, the merger is to be found "In the public interest."

Now while Mr. Price will demonstrate later that this legislative expression declares that the Comptroller's decision is to be conclusive, I shall proceed on the basis of the very least that can be said with respect to it, namely, that the same test of public interest in the light of the factors specified in the Bank Merger Act should be applied in determining reasonableness under the Sherman Act, and in view of the fact that the Department has seen fit to overlook completely this rule of reason we have done a little [fol. 6951] further searching of some of the authorities about the rule of reason and I have a sheaf of papers here which have on them cases which we have found.

I will read only a short portion of one to you because it is from this Circuit, our own Court of Appeals here. In the case of Hunt versus Crumbach in 143 Federal 2nd, which was in 1944, our Court of Appeals said,

> "Congress did not undertake by the enactment of the Sherman and Clayton Acts to prohibit each and every restraint upon interstate commerce. It sought to prevent only those restraints upon free competition in business or commercial transactions which tend to restrict production, raise prices, or otherwise control the market in goods or services to the detriment of the public."

I say to you that they haven't shown anything to meet that test in this case.

Now it is clear that the policy of Congress with respect to bank mergers is different from its policy with respect to industrial and commercial mergers, and if the Sherman Act were to be here applied I submit to Your Honor that that difference should be recognized and implemented.

There is a good reason why the policy of Congress in this is different, because there are differences between com- [fol. 6952] mercial banking and industrial enterprises which must be understood in order to evaluate a bank merger, this merger, in terms of possibly anticompetitive effects. These differences make it necessary to discard most of the concepts of monopoly and restraints arising from the asset size or market proportions which have been developed in industrial and business cases.

First, banking is a regulated industry. Its operations are of public consequence and affect the community at large and they are thus subject to the police power.

Way back in 1819, if Your Honor please, in McCulloch versus Maryland; it was established that the Federal Government had power to control banking; and this power has been exercised in a succession of statutes regulating various aspects of banking. For instance, the banking act of 1933 is entitled (and the title tells you) "An Act to Provide for the Safer and More Effective Use of the Assets of Banks, to Regulate Interbank Control, to Prevent Undue Diversion of Funds into Speculative Operations and for other purposes."

Similarly, every state in the union has undertaken the regulation of banking.

In the unregulated industries, if Your Honor please, competition is the cardinal precept guiding the economy. It is fundamental American policy, expressed in the Sher-[fol. 6953] man and the Clayton Acts that the public is benefited by competition as unlimited and as unrestricted as possible.

This implies that individual enterprises will go where there is a prospect of business and will do what affords a prospect of profit without deference to other enterprises which may be established in a particular area; but what this also implies is that the weak enterprises will not survive, but that is the price to be paid for the benefits of competition.

Unlike this, however, in the field of banking it is firmly established that the benefits of unrestricted competition are not worth the inevitable price. Dog-eat-dog competition does not go in the banking business. If a hardware store can't meet its competition and fails, well, a few people may go on relief; but if a bank is driven out of business the whole community suffers. I need only recall to Your Honor's memory the early Thirties in this part of the country, and I guess in most parts of the country.

The banking laws, including the Bank Merger Act of 1960, substitute regulation for unrestricted competition in an attempt to avoid the vicarious suffering produced by bank failures.

Anyone who has the capital and the initiative can go into a commercial or an industrial business, but it requires more

[fol. 6954] than that to go into the commercial banking business. A commercial bank isn't like a rich man who lends his own wealth; a commercial bank is the manager of funds deposited with it by the community.

A bank makes money primarily on its ability to use other people's money efficiently, not on the investment of its own capital resources; so before a bank can get into this business it must get a permit or a franchise from the State banking authorities or, if it is to be a National Bank, from the Comptroller, after being subjected to a searching and rigorous inspection.

Then, when it is chartered, it is subject to a host of regulatory statutes and rules. For instance, it is limited to the place or places where it can set up offices.

It is restricted in the way in which it administers its funds, the deposits of depositors which are the goods with which it does business.

It can't seek or compete for demand deposits by offering to pay interest on them, and the interest which it does pay for time and savings deposits is limited by law.

The scope of its activities is limited. It can't, for instance, go into the securities business; and in the employment of its funds it is sharply restricted as to the type of investment it may make and as to the amount of a loan which it can [fol. 6955] make to any one borrower, and the price which it can charge for its product, its loans, is restricted within a very narrow range by usury laws, by reserve requirements, by the rediscount rate, and by the open-market activities of the Federal Reserve Board, all of which was brought out here before Your Honor in testimony.

So there can't be any cost competition between commercial banks in acquiring their stock in trade (deposits) and virtually no price competition in the sale of their product (loans or credits) and in the sense that money and credit may be considered to be the product of commercial banks, product quality does not differ among competing banks as it does between competing manufacturers and sellers of commodities. It is all money, just the same money.

Then the safety of deposits has not been a competitive factor among banks since the statutes were enacted providing for insurance by the F.D.I.C., and I want to point out one aspect of this insurance which accentuates in my mind

the substitution of regulatory law for competition in this area.

Your Honor knows that while only deposits up to $10,000 are insured, the premium paid by all banks must be a percentage of their aggregate deposits of every size. Thus banks with a greater number of deposits in excess of $10,000 [fol. 6956] are required to help pay for the insurance of those which have few or no deposits over $10,000. In the field of industrial and commercial business there is no similar instance of a company being compelled by law to insure the liquidity or solvency of its competitors.

So that the whole concept has been to substitute regulation for unrestricted competition. Banking thus is a regulated industry, both in terms of entry into the field and in terms of operation after a bank gets into the field. As such, the nature of competition in banking is not comparable to that which exists between grocery stores or manufacturing giants.

The impact of this precise regulatory legislation upon the generalized standards of antitrust laws was pointed out by Justice Frankfurter, and while we cite this in our brief I should like to just read it. It is very short. He said in the RCA Communications case,

> "Prohibitory legislation like the Sherman Law, defining the area within which competition may have full play, of course, loses its effectiveness as the practical limitations increase. As such considerations severely limit the number of separate enterprises that can efficiently or conveniently exist, the need for careful qualification of the scope of competition becomes mani- [fol. 6957] fest."

In the discussions of the very act that we are merged under or hope to be merged under, the Bank Merger Act of 1960, Senator Fulbright said on the floor of the Senate,

> "And even if the Sherman Act is held to apply to banking and to bank mergers (even if it is), it seems clear that under the rule of reason spelled out in the Standard Oil case different considerations will be found applicable in a regulated field like banking in determining whether activities would unduly diminish

competition in the words of the Supreme Court in that case."

Well, certainly, Your Honor, the expressed policy of government limitation of competition in commercial banking must be taken into consideration in attempting to weigh the effect of the present proposed merger on commercial bank competition here in this Philadelphia area. That brings me to the nature of competition in commercial banking services.

They offer a variety of services to various types of customers. Not all commercial banks offer the same range of services or serve the same range of customers, but the testimony here shows that with the one exception, the acceptance of demand deposits, commercial banks receive substantial competition from a number (and it is a great number and an increasing great number) of non-commercial bank sources, and the basic issues in this case cannot pos- [fol. 6958] sibly be resolved without considering non-bank competitors as well as competing banks, and without considering the effect which the intensive scheme of regulations to which I have referred has on competition in these services.

The one service which distinguishes commercial banks from other institutions is this acceptance of demand deposits. Through the acceptance of demand deposits and the subsequent lending from them the commercial banking system has the ability to expand credit. The Department of Justice has seized on this function to endeavor to show that commercial banks are unique, but from a competitive standpoint this means absolutely nothing, for neither you nor I nor anyone else who might wish to make a loan at a bank has the slightest interest in whether the lender has or has not the ability to expand credit, nor do we choose a lending bank on any such basis.

Incidentally, while the ability of a commercial bank to offer demand-deposit services together with other services may be a factor in competition with other types of financial institutions, it hasn't been a determinative one since it is shown by our Exhibit D-27 that such other types of institutions have grown at a far greater rate than have the commercial banks; but the very nature of the demand deposit

function is of greatest importance in understanding why a [fol. 6959] large commercial bank cannot exert dominance, as my friends call it—dominance—over other commercial banks in the way a large industrial concern may be able to exert over its small competitors. The deposits are the life blood of a bank; they are what it lends, and lending is the principal source of income for banks.

To succeed a bank must attract and it must retain deposits. It can't control them, as a manufacturer might control his assets, because deposits are not something which a bank owns; they are something which it owes and something which it must give up upon demand, so that any overreaching of customers on the part of a bank can result in an immediate withdrawal of the bank's stock in trade no matter how large that bank may be. It is idle, therefore, to equate bigness with dominance in the field of commercial banking.

Since competition for demand deposits in the area of price and safety is non-existent by reason of banking laws and regulations, the only area in which competition can exist is that of service and convenience. These a small bank can furnish to its range of customers just as effectively as can the large bank; and that they do has been established by witness after witness after witness in this case, and by the exhibits showing the deposit growth of the smaller banks in Philadelphia and in the surrounding counties in the last ten years, which has been far greater than that of the [fol. 6960] Philadelphia National Bank or the Girard.

I know Your Honor is thoroughly familiar with Exhibit D-18 in this case, but I am handing up a copy because it so graphically shows this great rate of increase of nearly all of the smaller banks in Philadelphia and the surrounding counties compared with that of the Philadelphia Bank or the Girard.

Now small depositors maintain demand deposits chiefly for checking convenience, but the larger business and correspondent banks maintain demand deposits to support loans and lines and to compensate for services which the bank may render to them. In this area large banks in Philadelphia receive intense competition from large banks in other major cities.

Time deposits are received by all commercial banks; savings deposits also; but the maximum rate which can be paid by the banks for these deposits is fixed by law. Savings-deposit services are also offered by mutual savings banks, savings and loan associations, and credit unions in the Philadelphia area. Their rates too are fixed by law, but at a higher maximum than that of commercial banks. There is obviously no chance for a commercial bank to become dominant in this field.

[fol. 6961] Loans of many types and variety are made to a variety of customers and in every type commercial banks compete with non-bank lenders. The Department seems to feel that because commercial banks specialize in commercial and industrial loans, the competition from non-bank lenders and other types of loans must be disregarded, but this theoretical approach overlooks the intense competition which commercial banks receive from non-bank lenders, such as in the case of mortgage loans which Mr. Reycraft spoke of this morning. When Your Honor thinks of the four big mutual savings banks and the intense number of savings and loan associations right in the Philadelphia area, to say nothing of those in other areas of the country, you realize that this attempt to limit the competition of commercial banks in this field is almost silly.

Now perhaps because it is the only Supreme Court case involving an attempt to enjoin a proposed acquisition of assets under the Sherman Act, the Department of Justice has cited the Columbia Steel case as authority in its brief; and for the same reason we have cited it as authority in our brief, but our quarrel with the Department is that having cited it they then ignore in this case the very factors which the Court deemed significant in that one. We have cited in full that portion of the opinion on our brief which states what those factors are; but to epitomize them they are strength of the remaining competition, purpose of the [fol. 6962] merger, customer demand, and the peculiarities of the banking business which distinguish it from all others.

The Department has also failed precisely to define relative markets or to present any meaningful figures on the percentage of business controlled in such markets by the defendants. Instead, in their brief, they say it is their position, and I quote from it,

> It is their position "that the fundamental illegality in this merger is its substantial suppression and elimination of competition between nationally-ranked leaders in a local market, highly concentrated."

But Your Honor is left to speculate and guess as to the total amount of business done in any such local market and how the elimination of competition between the two banks will affect trade in such local market, whatever its stage of concentration.

We agree that the starting point of the views of Columbia Steel is to delimit the market in which the two firms compete. This involves a determination of the product or service lines and the geographical area of competition as to each one of these lines. The Department contends that the market area should be limited for each function to the political confines of the four Pennsylvania counties in which [fol. 6963] the merging banks and their branches are physically located.

Now it is quite obvious why they do that. They do that in order to inflate the percentage figures which they assume dictate the conclusions which they seek. The testimony in this case, I submit, Your Honor, establishes the fact that commercial bank markets are exceptionally complex and that any realistic definition of a relevant market for bank services must take into consideration not only the location of the bank and the location of its customers, but also the different types of customers, and more particularly the location of alternative choices available to them.

In so far as competition in banking is concerned, the most important factor is the alternative sources to which a customer can conveniently turn to receive the same or a comparable service, because a customer's chief interest is the alternative source which stands ready to serve him in case of dissatisfaction—the latent competition, you will remember Professor Harris called it.

From the banks' point of view these alternative sources are the competition which the bank must meet. Accordingly, the geographic distribution of effective alternatives constitutes the only realistic market area for measuring the alleged anticompetitive effects in the merger. On this basis, the four counties in which the banks' offices are or legally

[fol. 6964] can be (because it is by virtue of the Pennsylvania Law that they are restricted to the four counties) have no significance whatsoever as to the geographic market. Even the most modest customers in those counties are free to do business across political boundaries and do so. You will remember in the course of the testimony we talked about a man in Yardley, up in Bucks County, and said that if he doesn't get it in Yardley he can go right over to Trenton and get all the banking he wants. A man down in lower Delaware County probably does use Wilmington and all its resources. He is not restricted to any four-county area.

In addition to that banks in New York, Chicago, San Francisco, and many other large cities actively solicit accounts in the Philadelphia area; and conversely we solicit business from far away. This mobility of banking business is demonstrated by the fact that in the case of the Philadelphia Bank 44 per cent in dollar amount of its demand deposits of all kinds originate from customers located outside the four-county area and 48 per cent of its loans are made to customers located outside the four-county area.

The Court: Repeat those figures.

Mr. Littleton: 44 per cent in the dollar amount of Philadelphia Bank's demand deposits of all kinds originate from customers located outside the four-county area.

[fol. 6965] The Court: That is all Philadelphia banks or these two banks?

Mr. Littleton: Just Philadelphia Bank, Philadelphia Bank's demand deposits.

Mr. von Starck: Philadelphia National Bank.

Mr. Littleton: Philadelphia National. I am calling it "Philadelphia Bank," not Philadelphia banks.

44 per cent in dollar amount of Philadelphia National Bank's demand deposits—excuse me. I am reverting to the old name before the National Bank Act; and 48 per cent of its loans are made to borrowers located outside of that area.

The Court: Is that numerically or in dollar volume again?

Mr. Littleton: In dollars.

The Court: The second is in dollar volume too?

Mr. Littleton: That is in dollars.

The Court: All right.

Mr. Littleton, I think perhaps we will recess at this point

because you are not going to finish in ten minutes, are you?

Mr. Littleton: No, sir.

The Court: Suppose we recess until 2:00 o'clock then.

[fol. 6966] (Recess taken at 12:18 o'clock P.M. for luncheon.)

[fol. 6967] AFTERNOON SESSION

Present: Counsel as previously noted.

The Court: Mr. Littleton?

Mr. Littleton: If Your Honor please, when we adjourned for the luncheon period I was just going——

The Court: We had just had the 44 and 48 percentages.

Mr. Littleton: That's right. I was about to get to the point of stating that for the purposes of defining geographic market in which the two banks compete, the statistics which reveal the mere location of their customers are less relevant than those which disclose the customers' area of alternative choice. The evidence as to this shows that 68 per cent of the dollar volume of the defendants' commercial and industrial loans, that is, the two combined defendants, are made to customers whose banking choices include commercial banks located outside the four-county area; and at least 64 per cent of their demand deposits from partnerships and corporations are received from customers whose banking choices include commercial banks located outside the four-county areas.

I say to Your Honor that I think one would have to be [fol. 6968] blind to economic reality to infer any restrictive or anti-competitive or monopolistic effects of this merger on banks and customers located within the four-county area, when the merged bank will have to compete with banks elsewhere for at least two-thirds of its most important business. We have cases on our brief to indicate (and I think it is probably conceded) that the Department of Justice has the burden of proving the relevant market area, and with respect to commercial banking generally I submit to Your Honor that it has failed completely to meet that burden.

The Department, in its brief, proposes that ten product lines be adopted. This subject has been a little obfuscated because in their complaint there is one grouping; in their statement of issues it is another; in their request for findings it is another; and in their brief it is another, but let's take it from their brief.

The ten product lines which they contend should be adopted are commercial banking, commercial and industrial loans, installment lending to individuals by commercial banks, single-payment loans to individuals, real estate loans by commercial banks, personal trusts, time deposits of partnerships and corporations, time and savings deposits, demand deposits, demand deposits of individuals and partnerships.

Now it is our position, if Your Honor please, that com- [fol. 6969] mercial banking in its entirety is not a product line. It is a business, and it is a business that has two major subdivisions. One is the acceptance of deposits, and there the banks are debtors; the other is the making of loans, and there the bank is a creditor. Each is a separate function, having its own peculiarities.

Both of these major divisions are further sub-divided by distinct types of deposits and loans, as to most of which there are different and varying regulations and laws. Then, as to many types of these functions, there are different types of customers, different market areas, and most important different types of competitors and competition.

With the possible exception of demand deposits there is an identical or an effective or a satisfactory substitute for every separate one of these services which a commercial bank offers.

You will recall that Professor Harris said that it is impossible to analyze the competitive effects of the merger without analyzing separately each of these important functions.

Now in the Cellophane case the Supreme Court held that a market should be defined by the commodities which are reasonably interchangeable by customers for the same purpose; and in the Columbia Steel case the Court examined [fol. 6970) reasonable interchangeability from a production standpoint; and subsequent decisions, including decisions subsequent to those to which Mr. Reycraft referred,

demonstrate that reasonable interchangeability, whether from the viewpoint of production or use, is still the test for market competition.

Although we don't agree that commercial banking as such is a product line, even so, conceding for the purpose of argument that it might be, the Department has failed to show any restraint in commercial banking by reason of this proposed merger. Their case in this respect is based entirely upon the assertion that the merger will eliminate competition between the defendants, which I say to Your Honor is obvious, and that the merged bank would be the dominant bank in the four-county area.

Now, by use of this nasty word "dominant" the Department would have Your Honor believe that the merged bank would be able to control banking in the area, but their evidence consists solely of statistics which show the amount of business done by the merging banks and the fact that the merged bank would be the biggest commercial bank located in the four-county area. There is not a single word of testimony in this case that the size of the proposed bank would result in any restraint or reduction in the vigor of competition in any relevant market.

[fol. 6971] On the contrary, every competent witness, including one of the Department's expert witnesses, testified to the contrary.

The Court: Which one was that?

Mr. Littleton: Dr. Keith. He was asked the direct question by Mr. Reycraft at the end, what would be the effect——

The Court: I remember Dr. Keith, author of the Keith report.

Mr. Littleton: Author of the Keith report, yes, sir.

Now the teaching of the Columbia Steel case is that mere percentage amount of a market which a producer holds is not determinative of anti-trust violation, but let's assume for the purposes of argument that it might be.

The Department's attempted measurement of relative size has no validity in our opinion. The mere fact that this merger——

The Court: Now just why?

It seems to me that a lot of their argument is based on size, and size alone. Now why isn't it?

Mr. Littleton: That is what I am going to take up, if Your Honor please.

[fol. 6972] The Court: All right.

Mr. Littleton: The mere fact that the merged bank would have 35.7 per cent of the total assets, 33.1 per cent of the total capital funds, 34 per cent of all loans, and 35.8 per cent of all deposits of what? Of commercial banks with main offices in the four-county area—does not permit an inference of restraint of trade in that area.

The record is absolutely devoid of any information as to the amount of business done in the four-county area by any bank or banks other than the defendants, wherefore the figures upon which the Department relies to show dominance reveal nothing.

The Court: Haven't they put in some figures here that show the general four-county area, perhaps through the Third Federal Reserve system?

Mr. Littleton: They did, but they did not show any definite amount, dollar volume or otherwise, of business done by other banks in the four-county area at all.

Whereas, the banks' evidence shows that the proportion of total assets of banks with main offices in the four-county area which the merged bank would hold would not thereby enable it to engage in restraint of trade.

Here I must remind Your Honor of the mass of data which we produced in many exhibits, and I will try to [fol. 6973] winnow out what to me are the effective and significant figures. Perhaps the most significant is that out of 224 cities in the United States with populations in 1956 of over 50,000, 190 had a commercial bank with 35 per cent or more of the total commercial banking assets in the city, and 96 had a bank with 50 per cent or more of such assets.

After this proposed merger there will be 78 cities of 100,000 or more population which would have a lead bank with a greater percentage of total commercial banking assets in that city than would Philadelphia have even with the merged bank.

The Court: The Government says that that is bad in itself and, therefore, we should stop it.

Mr. Littleton: Well, they haven't shown us that it is bad. They may say that it is bad.

The Court: That is their contention.

Mr. Littleton: There are 33 such cities in which the lead bank has more than 50 per cent of the total banking assets; and right here in Pennsylvania and in the Delaware Valley area outside Pennsylvania every city with a 1960 population of over 100,000 has a commercial bank with a larger percentage of the commercial banking assets in that city than the merged bank would have in Philadelphia. Let's give you some of the figures:

[fol. 6974] Pittsburgh, 60 per cent; Reading, 56.3 per cent; Allentown, 48.3 per cent; Erie, 39.6 per cent; Scranton, 56.6 per cent; Moving across the river, Trenton, 37.8 per cent;

Camden, 56.6 per cent; and

Philadelphia, even after this merger, wouldn't have more than 36.2 per cent.

Now the Department has introduced no facts which make its argument peculiar to Philadelphia banking. They are not saying Philadelphia is different from all the rest of the country.

The Court: Can you point to any evidence in the record wherein the Government or you produced any evidence—I am talking about both the plaintiff and the defendants—that concentration of 50 per cent or more is harmful to the American industrial banking, the public, or other interests?

Mr. Littleton: Not at all.

The Court: Is there any evidence in this record?

Mr. Littleton: None that I know of, and the F.D.I.C. report to the Congress, which came out in the middle of [fol. 6975] this trial, indicates all to the contrary, that this has nothing to do with it.

The Court: I was just wondering whether there was evidence in here other than statistics from which I am to draw a conclusion one way or the other.

Mr. Littleton: Not at all.

The Court: Is there any positive testimony or opinion of anybody that that is bad?

Mr. Littleton: No. The opinion is the opinion of Mr. Jennings, who has had nationwide experience, and he testified that all of these cities throughout the country enjoy the benefits of adequate banking competition.

The Court: Didn't——

Mr. Littleton: But equally significant with Jennings' testimony, I think, is the silence of the plaintiff.

The Court: Well, I am not——

Mr. Littleton: Here, if Your Honor please, there were available 190 cities, each of which had a bank with 35 per cent or more of the total commercial banking assets. That is 190 clinics, if Your Honor please, in which could be observed what the effect of such would be on competition.

As suggested by my partner, Ernest von Starck, here were 190 test tubes available to the Department of Justice, but they didn't visit a single clinic and they didn't look in [fol. 6976] a single test tube; and thereafter produce before Your Honor the result of their clinical or their experiential findings.

Now maybe I do them an injustice. Maybe they did look and they found nothing that they wanted to bring before you.

But I think it is fair to comment and fair to believe that if the Department of Justice lawyer who said at the outset of this case that this merger was such a violation of the antitrust laws that if it could not be stopped no merger could be stopped, I think it is fair to believe that if such a one should have found the slightest evidence of invidious effects of 35 per cent concentration in any one of these cities he would have brought it in here. He couldn't and he didn't find it; and the reason that he couldn't and that he didn't is because it doesn't exist.

Now he made a remark this morning about the seven gentlemen who are the very respected Governors of the Federal Reserve Board. If he had found anybody in the Federal Reserve Board, those seven or any member of the staff, who could provide him with real evidence, not theory but real evidence, that 35 per cent would substantially and harmfully affect competition in Philadelphia, wouldn't he have brought them in as a witness instead of putting in the record an advisory report, which is not, in that re- [fol. 6977] spect at least, supported by a single scrap of evidence in this case?

But not a soul did he produce from the Federal Reserve.

Now if the relative proportion of banking assets held by the lead bank in a city is determinative of restraint of trade, the Department of Justice, with all the great facili-

ties which it has at its disposal, could readily have produced evidence of restraint in at least one of the 190 major cities in which there has been a greater concentration than there would be in Philadelphia after the merger; but the Department offered no evidence whatsoever with respect to this.

Now in their reply brief filed the day before yesterday, in spite of saying——

The Court: They filed on schedule. Now this schedule——

Mr. Littleton: Of course, they did. Of course, they did.

The Court: All right.

Mr. Littleton: In spite of saying on page 10 that their case doesn't rest upon a finding that any specific percentage of business would be held by the merged bank, on pages 17 and 18 I think they go right back to it and I would like to [fol. 6978] comment on it a minute.

They say the Government submits that even if the Court were to give weight to the "Convenience and needs of the community" under any interpretation of this phrase, in passing on this merger, no case has been made which would justify the elimination of direct and substantial competition and the very substantial increase in concentration in a market already highly concentrated by a series of mergers.

In passing comment, the rest of the country must be in terrible shape.

> "While the antitrust laws may not stand for the proposition that bigness is badness," they say, "they do stand for the proposition that the alleged advantages of size must be subordinated to preservation of a system in which small units can effectively compete with each other."

Now I say that there is no evidence here that the other banks in Philadelphia can't effectively compete with each other and with the Philadelphia-Girard after the merger.

As a matter of fact, there is a quantity of testimony from other banks that they can and that they are looking forward to it avidly and enthusiastically.

> Then the Department goes on it its reply brief, "Defendants' reliance on a high level of concentration of

[fol. 6979] banking in other cities is misplaced. Defendants are in no position to propose that evidence of concentration in other cities is evidence that Philadelphia banking will not be adversely affected by this merger. When similar evidence was offered by the Government it was uniformly objected to as being irrelevant to the issues."

May I add that which they did not add? That my objections were uniformly overruled by Your Honor and they were permitted to go ahead?

They don't say this, and how they can make this assertion when they know that Your Honor overruled every one of my objections, I don't know.

Just going further in the reply brief.

The Court: I wonder if you feel better that it is in now; is that it?

Mr. Littleton: I made those objections hoping they would be overruled because I was so anxious to get Jennings' testimony in.

The last sentence in that paragraph of the reply brief,

"In defendants' brief, overlooking the significance for the purposes of Section 1 of the Sherman Act, of the progressing concentration of banking resources in [fol. 6980] the hands of historic leaders in the four county area."

Well, my comment on that is that concentration is not significant absent any showing of an effect on competition and there certainly hasn't been shown any in this case, and again referring to the F.D.I.C. report to the Congress, which was produced and is an exhibit in this case, they couldn't find any either.

Now the fact that an overwhelming number of the large cities in the United States have these banks with more than 35 per cent of the total banking assets in those cities makes it impossible to escape the conclusion that the proportion of bank assets held by a bank in a city is not indicative of the competitive power which a bank may have; but there were further satistics produced by the banks which show that large size does not produce dominance in banking.

This morning I handed up for Your Honor's convenience D-18, which showed the percentage growth of deposits of every bank in the Delaware Valley during the last ten years, adjusted for mergers.

The Court: Let me ask you this—how valid are statistics as such?

Mr. Littleton: Well, the other day I was told that there were three types of lies: There first is a lie and then there [fol. 6981] is a damn lie and then there is a statistic.

The Court: Mr. McDowell told me that back in 1921, not the McDowell of the Philadelphia National Bank.

Mr. Littleton: Nevertheless, those banks are growing, they are not shrinking. They are growing, not shrinking.

The Court: I know, but in some banks they can grow 3000 per cent and those banks will still have only $100,000 of deposits of $1 million of deposits.

Mr. Littleton: It depends on where they started. They are Russian statistics; I grant you that.

The Court: Sure.

Mr. Littleton: With the Philadelphia National Bank second and the Girard third, if the relative size indicates the relative growth, the growth of the two banks in the two decades should have exceeded the growth of most of those banks; but all of those other banks grew faster.

The fact is that 107 of the 115 other banks (not all of them but 107 out of the 115 banks in the area) experienced a percentage deposit growth greater than that of Philadelphia Bank or Girard.

If we look over the banks in the four-county area, which the Government likes to do, 35 of the 40 other banks had a percentage deposit growth greater than that of either of [fol. 6982] the defendants.

Now the Department consistently overlooks the fact that there are 42 commercial banks in the four-county area and 117 commercial banks in the Delaware Valley, ten-county area (which we choose to call it), and that after the merger there will be only one less. They attempt to avoid the importance of this large number of banks by arguing that the loss of the Girard, the third largest bank, is of extraordinary significance to the competitive climate. This is a conclusion for which there isn't a single word of testimony in the record. On the contrary, the officers of every local bank

who testified were of the opinion that competition would be increased by the merger.

Then the Department points with apparent apprehension to a reduction in the number of competing units during the past decade, both nationally and locally. This, of course, assumes without proof that there were an adequate number of units before and that there are too few now.

Well, there may have been too few in the past or too many in the past and a proper number now. Again I recall to Your Honor's mind the early years of the Thirties, the early part of the Thirties, as to whether there were too many in the past or whether because of changing conditions there may have been a proper number in the past and a proper number now. Whatever it is, the Department made [fol. 6983] no attempt to show whether the present number of banks is too great or too small or what tests should be applied in determining that question.

Again referring to the 1960 report of the F.D.I.C. to the Congress it is stated as a conclusion, based on that agency's study, that a reduction in the number of banks does not necessarily mean a reduction in competition. That is D-48.

The only Philadelphia banking witness whom the Department of Justice called, Mr. Sinkiewicz, testified that the reduction in the number of banks in Philadelphia over the last 15 years has been accompanied by an increase in banking competition.

[fol. 6984] Now, the Department is greatly concerned about the small or medium-sized borrower. I get it that the thrust of this suit is powered by this assumed solicitude for the small or medium-sized borrower, and as I have said, there would be, after the merger, 41 banks in the four counties and 116 in the ten counties. Every one of these banks, with the exception of two, have lending limits over $10,000. One of them has a $9,000 limit and another has a $5,000 limit.

Now, to graphically demonstrate this point that I am about to make here, we have combined Exhibits D-16 and D-17, which are respectively the figures with reference to the borrowers from the Philadelphia bank and from the Girard Trust, broken down by amount of loans, amount in dollars of loans, and Exhibit D-57, which shows the number

of commercial banks after the merger able to accomodate customers,

(Document handed to the Court.)

I don't know exactly what a small or a medium-sized borrower is, but let us talk about the borrowers of less than $50,000. You will notice from the percentage figures there that the borrowers less than $50,000 from Philadelphia National and Girard Trust combined represented 99 per cent in number of the borrowers from those two banks.

Now, after this merger, 99 per cent of the borrowers of [fol. 6985] these two banks will have 35 banks in Philadelphia to which they can go for similar loans, and if they choose to go into the ten-county area, they have 90 banks to which they can go.

How can Mr. Reycraft expect to get us excited about the fact that if the third bank, as he says, in size, Girard, goes out, the awful effect that will have on this situation? Here are 99 per cent of the borrowers from the Philadelphia and Girard combined. They don't care whether they go to the third bank in size or the 35th bank in size. They can still get accommodated, and they will have 35 alternative choices to go to after this merger in the four-county area, which Mr. Reycraft insists on limiting us to. To go outside, 90 alternative choices.

We all know as a practical matter that no customer would go to all of these banks, but a potential borrower—and the testimony is replete with this on both sides—a potential borrower need only to go to two or three banks to test the bankability of his loan. In view of the wide geographical distribution of the banking offices in Philadelphia, it is clear that any of these borrowers will have an adequate choice of alternative banks. Any borrower in South Philadelphia or Northeast Philadelphia or in any of the suburbs——

[fol. 6886] The Court: Hasn't it been blandly assumed throughout this case that a bank owes a duty to the public to make a loan regardless of anything? It almost has been. I have been just wondering when somebody is going to bring up the idea that a credit rating means something in making a loan.

Mr. Littleton: I think Mr. Price will get into that, but, of course, credit rating has a great deal to do with it. Again

I say that I think that a great deal of the thrust here is small business, and as you know, the small business administration and small business loans really are for the arranging of loan for people who can't get accommodation because they can't get credit rating, because there is never a good small business loan that wouldn't be snapped up right away by many, many banks or any banks that have the opportunity to grant it.

Now, for larger loans the number of commercial banks in the area decreases, as Your Honor will see from this combined exhibit, but even for loans up to $500,000 there are ten banks in the four counties and sixteen banks in the ten counties; and for loans of $500,000, as well as for many loans under that amount, banks from all over the United States compete actively in Philadelphia. There is plenty of testimony in the record about i

[fol. 6987] The Department of Justice also contends that the anti competitive effects of the merger are shown by the fact that the merged bank would have 65 of the 284 bank officers in the four-county area. Again the only witness produced by them who is familiar with the local branch banking situation, Dr. Keith, testified that the branch operations of Philadelphia National and Girard—and I am quoting his words—"Do not overlap significantly," so that the merger will have no significant effect on branch office competition.

The related argument of the Department that after the merger a would-be borrower who is unsuccessful at one of these 65 branches would be out of luck just doesn't stand analysis, because despite the number of branches of the merged bank, the alternative choices of a would-be borrower can have been reduced by no more than one, and in areas where there is presently no competition between branches of the two banks—and that is what pertains mostly—alternative choices have not been reduced at all.

The Department does not contend that the merged bank would have any power to control interest rates or exclude competitors or adopt other restrictive devices. It just couldn't contend that.

The Court: Who doesn't contend that?

[fol. 6988] Mr. Littleton: The Government doesn't.

The Court: It does. We had a professor here——

Mr. Littleton: I didn't hear it this morning, sir.

Professor Goodman?

The Court: One of them had some theory. I don't know where he got it.

Mr. Littleton: But I haven't heard it urged by the Government here this morning.

The Court: No.

Mr. Littleton: And I don't think they could contend it, since all of the real evidence is to the contrary, and since there are an adequate number of alternative choices in the four-county area and a greater number in the Delaware Valley. It is impossible to see that the merger presents even the possibility of a restraint of trade, let alone that certainty which is required by the Sherman Act.

Again I think I should refer to the reply brief, because they have something to say about that on page 17, the bottom of page 17. They say, in referring to our brief:

> "They"—meaning the banks—"also assert that there is no evidence that the merged bank would have any power to control interest rates or exclude competitors or adopt other restrictive devices which are the customary evils of monopoly. [fol. 6989] This assertion in conjunction with the parallel assertion that there is an adequate number of alternative choices of commercial banks leads the defendants to conclude that it is impossible to see that the merger presents even the possibility of a restraint of trade, let alone the certainty that is required by the Sherman Act."

Now, this is the important thing they go on with.

> "In applying Section 1 of the Sherman Act the Supreme Court has found an unreasonable restraint of trade even though there was no showing that the restraint made it possible for defendants to fix prices or exclude competitors."

But they don't tell you in the brief, if Your Honor pleases, that those two cases, International Salt and Northern Pacific, were both tie-in cases, both per se violations.

They go on and quote a lower court case from the Eastern District of Michigan.

> "As was said in United States vs. Besser Manufacturing Company"—giving the citation—"we do not

concede that the Sherman Antitrust Act anticipates that no deterring steps can be taken until a 100 per cent [fol. 6990] monopoly has become a fait accompli. It is not essential that its result should be complete monopoly; it is sufficient if it really tends to that end, and to deprive the public of the benefits which flow from free competition."

Again I have to complain that they haven't given Your Honor the whole story, because the preceding paragraph to that sentence I have just read you finds that the defendant had the power to control prices.

Let me read it to you, sir, if you please:

"When two closely related corporations have 65 per cent of the dollar value of any industry and the balance is divided between over 50 other manufacturers with the nearest competitor having less than 8 per cent of the whole, we believe that such a combination has to all intents and purposes a monopoly within the meaning of the law. Add to this the fact that it's the big automatics that are important, not the hand tampers or the semi-automatics, and we find the position of Besser-Stearns in the industry is overwhelming. It has the power in its field to control the prices—meeting the test of the rule laid down in American Tobacco Company," and so on.

[fol. 6991] "The popular meaning of monopoly at the present day seems to be the sole power (or a power largely in excess of that possessed by others) of dealing in some particular commodity or at some particular market or place, or of carrying on some particular business."

I say that these cases in the reply brief don't weaken our contention in the least.

The Department hasn't attempted to measure the precise effects of the proposed merger on any of the alleged product lines referred to in its brief, the other nine that I read to you a few moments ago. The only one they have dealt with is commercial banking, a broad line of commercial banking, but so far as the record shows, the merger will have no effect on any of them adverse to competition.

Now, we have dealt with these in great detail, even though the Department has not done so in their brief, we have dealt with these in great detail in our brief, and unless Your Honor instructs me to do it, I will not burden you or bore you with going into it, except to say that the effective alternatives in every industry, both among commercial banks and other types of financial institutions, are so overwhelming in number and kind that there would seem to be [fol. 6992] no reason for me to dilate on them here.

The Court: Wasn't the main thrust of Mr. Reycraft's argument this morning the tendency toward monopoly, the substantial reduction in competition and the trend toward monopoly? Didn't you understand that to be the thrust?

Mr. Littleton: I understood that to be his thrust, yes, sir, and I think it is mostly directed to the demand deposits.

The Court: What guideposts have been given by Congress in hearings that you can point out to me? Are there any in the hearings on this Bank Merger Act? I have read this three times and I can't find any.

Mr. Littleton: You find a great many statements one way and then you find a couple that seem to cut it down.

The Court: Including a lot by those who appeared here for the Government.

Can you delineate any standards? Maybe Mr. Reycraft can when he comes back.

Mr. Littleton: I think Mr. Price is going to talk about the Congressional Record and the discussion in Congress and attempt to show you what guideposts we think there may be.

The Court: Incidentally, this (indicating) is by courtesy of the Federal Reserve Board of the Third District.

[fol. 6993] Mr. Littleton: May I discuss for a few moments, if Your Honor please, demand deposits, because in banking practice demand deposits are classified as those of individuals, partnerships, and corporations, which Mr. Reycraft denominated as IPC—that is the way the call report refers to them—foreign banks and domestic banks, United States Government, and states and political subdivisions.

Now, the nature of competition differs in these categories, and the markets vary whether you view it from the location

of the customers or from the customers' alternative choices. It is the same problem. For instance, the market for foreign bank deposits is clearly international, and for deposits of correspondent banks it is national or perhaps regional, and for those of the state and its political subdivisions, it is statewide; and for those three types of deposits commercial banks compete with the United States Government obligations, commercial paper, bankers acceptances, and they even compete for correspondent bank balances with the Federal Reserve banks themselves.

The demand deposits of individuals, except for the very largest, are generally local, but even in this category such depositors are not restricted in their choice to the four-county area. I refer to my Yardley-Trenton example.

In the case of small and medium-sized deposits of part-[fol. 6994] nerships and corporations, the same is true, but large deposits, large business deposits, are definitely in the national market. As a matter of fact, 64 per cent of the total demand deposits of partnerships and corporations held by these two banks are owed to customers which are located outside the four-county area, or if they are located within, they have choices, because of their size, outside the Delaware Valley.

The Department has compared the defendant's demand deposits only with those of other banks with headquarters in the four-county area. They keep restricting themselves to that, and I say that this is completely meaningless as a measure of competitive power, since there is no disclosure of the total amount of such business done by such banks outside the four-county area or of the amount of business done inside the four-county area by banks outside the area. Without that I think their figures are meaningless; but, in any event, the fact that a bank has a substantial proportion of demand deposits in a given area is no indication of monopoly or of restraint of trade.

I think it is one of the most important parts of our presentation that size, measured in terms of total resources, is not a determinative nor even a significant factor so far as banking competition is concerned. It does not carry the [fol. 6995] same implication of dominance that it does in other industries, whether they are regulated industries or whether they are not.

Just consider, if Your Honor please, two manufacturing corporations each of which controls 30 per cent of a significant market. You put these two together, and what you have done is to amalgamate a mass of productive assets—plants, tools, raw materials, inventory—so that the owners of this new combined enterprise have control of 60 per cent of the productive capacity used in this market. This may well be a dominant concentration of assets. I don't say that it will be, but it may well be.

But now consider two banks in the same situation. The dollar amount of their combined resources may far exceed that of the two manufacturing companies, but the shareholders of the resulting institution don't own a mass of capital assets. They own liabilities, because the resources of a bank are offset by capital funds and by deposits, which are liabilities.

As I have said earlier, deposits are the life-blood of the bank, and, on the average, the capital deposit ratio is 1 to 10, so that when you put together two large banks, the effect in terms of concentrating capital funds is to amalgamate 10 per cent of the two. The balance consists of liabili-[fol. 6996] ties repayable, in the main, on demand. Depositors can pull them out at any time, and according to the testimony which Your Honor has heard in this case, they frequently do. Some decide, when there is a merger, to withdraw their accounts and take them to a smaller bank. Others who had accounts in both banks decide to move part of their combined account to a third bank.

Again the bank doesn't own its deposits; it owes them. It is dependent on the good will and on the service it renders to keep them. So long as depositors have an adequate choice of other banks to go to, the combined bank will remain big only if it provides service and retains its good will. So the amount of the bank's demand deposits is merely a measure of past success and is no forecast of future growth. The record is replete with evidence that small banks are relatively much more successful in acquiring new deposits than are large banks; but, in any event, there is no evidence whatsoever in this case that the merged bank will be able to restrain trade with respect to demand deposits of any category in the four county or any other area, and

I think it was the demand deposits on which Mr. Reycraft was emphasizing his argument.

Now, affirmatively, if Your Honor please, we contend that this proposed merger will benefit the Philadelphia [fol. 6997] area and will strengthen bank competition nationally. We all know that commercial banking is essentially a service business and as such it has to keep in step with changes in population patterns and in the banking needs of the community.

Your Honor knows, and I think Mr. Reycraft knows now, since he has been in Philadelphia so much, that the Philadelphia banking community has adjusted to changing population patterns and to the needs of the individual citizens. I thought for a while in this case we were almost trying a branch bank case, and I don't want to get led down that lane, because we are not, but simply to comment on the vast change that has taken place in the Philadelphia and the Delaware Valley area in the last 10 or 15 years, the movement of people, the movement of industry, the increase of industry in what have been suburban and what have been rural areas. I think it was the Mayor who said, "All you have to do is go up in a helicopter and look down and you see that the whole Delaware Valley is just one big industrial and business complex."

The Court: I have seen a forecast that within the next 20 years from Maine to Virginia will be one solid business complex too.

Mr. Littleton: Yes, sir.

This great change in the outlying areas, of course, affects the customers and the business of the bank. They have to [fol. 6998] follow their customers and they have to go where business bids them go. Banks don't establish branches for the idea of having branches if there is no business there. They go where business goes. They go to follow their customers. It is not a desire just for bigness, as Mr. Reycraft suggested this morning, not a desire just to increase in size, but it is a response to customer and public and business needs. I don't say it is all pro bono publico. You want to go where you get the business. Where customers go, we have to move with them.

The Court: It isn't altruistic.

Mr. Littleton: No, it isn't altruistic, certainly not, but

we want to go where our customers go, and we want to go where new businesses are going. This is what explains the merger movement, not some invidious desire to just grow big or to say to New York, "We are as big as you are," and to Boston, "We are as big as you are. We have got just as big a bank." It is not that, and as one writer has said, it is not any pressure from inside the banks that is pushing them out. Rather it is the suction from outside, from customers and businesses that go outside and establish themselves.

Now, that is the branch banking, the cross county merging, if you please, that is taking place, and on which the [fol. 6999] Department of Justice looks with, I think, apprehension; but it is just the Philadelphia banking community adjusting to the changing population patterns and to the needs of business and the citizens.

Now, the number of banking offices in the four counties which the Department selects has increased from 178 to 283 in the last 13 years, in this effort to adjust to the changing population and business pattern, and virtually all banks in the Philadelphia area now provide every kind of service—special checking accounts for small depositors, a full line of banking services—but banks in the Philadelphia area have not kept pace with the ever increasing credit requirements of large industrial and commercial enterprises in the Delaware Valley, or I would rather state it this way, if Your Honor pleases: The growth and the rate of growth of the general economy in the Delaware Valley has gradually outstripped the growth and the rate of growth of the banks.

Our Exhibit D-25, which Your Honor may remember, graphically demonstrated this. It showed the growth of business. Then there are other measurements of our present inadequacies in banking in Philadelphia. Our exhibits show that Philadelphia ranks fourth or fifth when the twelve largest metropolitan areas in the United States are ranked [fol. 7000] on the various measures of economic activity. Yet Philadelphia ranks ninth on the basis of the size of its leading bank; and I am sorry to say that bank is neither the Philadelphia National nor the Girard Trust Company. The largest bank in Philadelphia ranks 20th in the United States. The First Pennsylvania Company ranks 20th in the United

States and is smaller than one or more banks in San Francisco, in Pittsburgh, in Boston, in Detroit, in Cleveland, and in Dallas, every one of which has a smaller population than Philadelphia.

As a matter of fact, when this merger has been consummated, the merged bank, as Your Honor knows——

The Court: Hadn't you better put it, "if consummated"?

Mr. Littleton: I am speaking very hopefully, sir. If, as and when this merger has been consummated, the merged bank will still be smaller than the Mellon out in Pittsburgh and only about the same size as the First National of Boston, the First Boston.

Now, what is the consequence? Well, the consequence, if Philadelphia does not have a bank large enough to meet the normal needs of the large business enterprises of today, a great deal of our bank business is shifted to New York, and no amount of protestation from Mr. Reycraft as to [fol. 7001] what wasn't shown can deny that.

The Court: Well, it could have been shown.

Mr. Littleton: It could have been shown, certainly.

The Court: And it wasn't.

Mr. Littleton: And it was shown in general by the testimony of men like McGinley and Carter and those people—not only to New York, but to other cities which have larger banks than Philadelphia.

Banking business is solicited actively in Philadelphia by all of the large banks throughout the United States, and particularly by the New York City banks, which, according to Mr. Carter, if you remember, according to what a New York banker said to him, they consider Philadelphia their happy hunting grounds.

Now, the purpose of this merger is to stop this trend and if possible to reverse it. The Department does not seem to think that that is a laudable purpose, or at least they comment in their reply brief on page 14 at the bottom:

> "The evidence showed, and defendants do not contend otherwise, that of the six banking factors enumerated in the Bank Merger Act the only one which tends to support their position that this merger would [fol. 7002] be beneficial is the convenience and needs of the community to be served."

[fol. 7003] Now I think this is a totally unjustified inference. The Comptroller says he considered all six banking factors, as well as the possibility of restraint or the tendency to create a monopoly; and what the Department of Justice is here saying is that we must, in this case, prove as to every one of these factors enumerated in the Banking Act of 1960 that this merger is right and that if we don't prove every one of them then this merger must be wrong. Congress never said that and I refuse to concede that that is our burden.

They go on and say so far as increasing deposits is concerned, the evidence shows that the growth of deposits in Philadelphia is unrelated to the lending activities of Philadelphia banks. I say again that is totally unjustified, because one possible reason for the slower growth of the Philadelphia National and the Girard is the loss of larger customers or the inability to obtain potential customers due to the inadequacy of their lending capacity.

A little further along on the same page they say,

> "Similarly, defendants do not point to any business which might consider locating in the Philadelphia area because of this merger. In fact, Mr. Brown appeared to concede on the stand that the merged bank would not be able to encourage businessmen to establish [fol. 7004] plants in the area because of its increased lending limit. This is evidence which defendants have failed to account for in maintaining their position that the merger is indispensable to the satisfactory progress of the Philadelphia area."

Well, I can certainly remember Mr. Graves on the stand, and he testified that banking was one of the factors which persuaded a large aluminum company not to locate here. That is just one comment I would care to make on it.

Now, if Your Honor please, if this merger is permitted, I will put it that way, the new bank will not only have a lending limit and resources more comparable to the banking needs of Philadelphia, but it will also have sufficient resources to enable it to create special departments for types of loans and industry groups, it will enable it to increase its services to correspondent banks, to establish departments to develop new services, and to develop the

uses of electronic equipment. The increased total resources of the merged bank will enable it to develop more fully its foreign services through increased investment in Philadelphia National Bank's international investment corporation.

Let me say right there that this is all in furtherance of [fol. 7005] the public good and the public purpose; if the expression of Congress in the legislation which it has enacted is supposed to be the public will speaking (and I think it is) because these laws have only in recent years been passed by Congress, which shows that it is the policy of the United States Government to have domestic banks like the Philadelphia National Bank get into this international investment corporation thing; and this merger will permit us to do that kind of thing. We have the corporation formed, but we are too small to do anything real with it at the present time.

The formation of an international banking corporation, the use of full-time representatives abroad, and the opening of foreign branches—all of this in turn, because nothing succeeds like success, will enable the merged bank to attract large customers in the national market who require these specialized services.

Now to answer and to anticipate what Mr. Reycraft will say, Your Honor will remember that witness after witness stated that this would not adversely affect existing relationships between these large customers and other Philadelphia banks; that this would create new customers.

The public would benefit from the additional large customers which the merged bank would secure.

Your Honor will remember that an analysis we had of [fol. 7006] the accounts of the largest customers of each bank, and it showed over the year 1960 that those customers on the average maintained deposits which exceeded their loans by a very substantial margin. In the case of Philadelphia National average deposits were twice as large as average loans; and in the case of Girard average deposits were more than one and one half times the amount of the average loan.

This is the type of customer that the banks seek to acquire and hold by this merger and the excess of deposits over loans thereby produced, Professor Smith and his formula to the contrary notwithstanding (and I am not

going to get into that) will constitute additional credit available in Philadelphia to all sizes of business borrowers and so will be of help and interest to the small and medium-sized borrower about whom the Department of Justice presumes to be so concerned.

Now the Department not only implied, they explicitly stated this morning that other methods than merger might be used to establish a lending limit of the size commensurate with the needs of the Delaware Valley community. Well, a bank in Philadelphia, if Your Honor please, of the size of the proposed merged one cannot possibly be achieved by the sale of additional stock or by retained earnings within any reasonable period of time. It is not [fol. 7007] only additional capital (I don't have to argue this to Your Honor, I know you know it). That isn't the thing that is necessary. What is necessary are additional deposits. We have plenty of capital. As a matter of fact, both of these banks have more capital than the average. They don't need more capital, but additional capital must be supported by deposits which, in turn, will produce earnings. Otherwise, there would be an unwarranted diminution of earnings per share to the detriment of the presently existing shareholders; and I say to you it would take years to build up sufficient deposits for Philadelphia National to support $70 million of additional capital, which is the amount necessary to increase the lending limit from $8 million to $15 million.

Now Mr. Reycraft this morning (it is not in the record but I have no objection to that) mentioned in passing what our friends, The First Pennsylvania Company, are preparing to do and I have seen it too in the press. I don't think it would be proper for me to comment on that here except to say that it is not all to be by the sale of stock—part of it is to be by transfer from undivided profits into capital.

I think I can say that they haven't sold the stock yet, and perhaps they will; but they are going to have to get a lot of deposits to support that.

Now I don't want to go outside the record, but our [fol. 7008] friend, Mr. MacLaren, the vice president and comptroller of the Philadelphia National Bank, has furnished me with a complete memorandum of what we would

have to do, and if Your Honor cares to have me go into that to show what the effect of it would be——

The Court: I think it has been gone into. I think Mr. Brown testified in that regard, that all that you would do if you put in more capital was dilute the stockholders. He said the same thing, you had to have deposits to support earnings.

I think that is completely in evidence here.

Mr. Littleton: Sure, so I will just——

The Court: I believe he testified. If it wasn't he, it was someone else.

Mr. Littleton: Let me say then——

The Court: There is testimony in this record to that effect.

Mr. Littleton: The Philadelphia Bank could raise its lending limit to $10 million by offering shareholders the right to subscribe to one new share for every ten shares held and by transferring approximately $6,800,000 from undivided profits to surplus; but the $10 million lending limit is not enough competitively for a bank such as the Philadelphia Bank, with its relatively large number of [fol. 7009] national accounts.

Beyond that, Philadelphia National Bank doesn't need additional capital. It is already stronger than the average, capitalwise. The earnings, if it did this, would be diluted by about 8 per cent and a fair estimate, a conservative estimate, is that it would take from $45 million to $65 million in new deposits to restore earnings to their 1960 rate; and on the basis of past deposit growth it would take seven to ten years to accomplish this.

Now to reach a $15 million lending limit, which is what we will get through this merger, through the sale of additional shares would be simply impossible at Philadelphia National Bank. Let me tell you why.

First, shareholders would have to be given the right to subscribe for one new share for each two shares held and, as Your Honor well knows, there would be many, many shareholders (small shareholders) who couldn't afford to exercise the right.

The earnings would be so diluted that no careful investor would be interested in the deal and the management couldn't even recommend it to the board; and knowing

the board I would say that even if the management should be so foolish to recommend it, the board, I don't think, would approve.

[fol. 7010] Now if the stock could be sold at 45, to give some theoretical value, the proceeds would be $59,600,000 and then you would have to transfer $10,400,000 from undivided. That would leave the bank in pretty thin condition, with only $7,200,000 of undivided remaining.

If, instead of selling at 45, we sold it at 50, only $3,800,000 of undivided would have to be transferred and an adequate $13,800,000 of undivided profits would remain.

But—and here is the big "but"—the future earnings wouldn't support either price. Assuming for the purposes of argument (and it is a pretty violent assumption) that the new funds would earn 5 per cent (I would say that would be at least 2 per cent high because, of course, the loan and investment cost would increase substantially) earnings per share would decline 25 per cent and it would take $275 million to $350 million of new deposits to restore earnings per share to the 1960 level. Just impossible; just incomprehensible to talk about.

Assume the funds earned 3 per cent, which is more realistic; then it would be even worse.

Now the other great point that has been made constantly, and I think Your Honor must have gotten sickened to death with it because we all talked about it so much, is this question of participation. Over line participations in [fol. 7011] the true sense are used almost exclusively by small country banks which maintain balances with city correspondents like the Philadelphia National or the Girard sufficient to justify the participation in the over line loan by the large city bank, where they let their correspondents in on it.

The Court: I have come to the conclusion that that was a suggestion of non-bankers to bankers how to run their business, so don't go into it.

Mr. Littleton: All right. I won't go into it at all.

Now a further benefit to the Philadelphia area lies in the possibility that a bank in Philadelphia which is large enough to compete effectively on the national and international markets will serve as an inducement to the location the new business and industries in Philadelphia and that,

Mr. Graves of the P.I.D.C. and the Chamber of Commerce and the Mayor were very, very definite about.

The Department argues that the need for the merger and the benefits which will result from the merger are not relevant to the issues in this case but, if Your Honor please, these factors at the very least show that the proposed merger is motivated by proper business reasons and not by any intent or purpose to restrain trade or achieve a monopoly.

In addition, these facts establish that it would be a [fol. 7012] reasonable merger in view of the public interest to be served. I quote the Appalachian Coal case:

> "In applying this test a close and objective scrutiny of the particular conditions and purposes is necessary in each case. Realities must dominate the judgment. The mere fact that the parties to an agreement eliminate competition between themselves is not enough to condemn it. The question of the application of the statute is one of intent and effect and is not to be determined by arbitrary assumptions."

Now since the Department of Justice has failed to show any restraints, the merger here in my opinion is even more clearly not subject to attack under Section 1. Think of it, Your Honor, in this case the Government has not shown that this merger will hurt other banks, they have not shown that it will hurt any customers, they have not shown that it would create a monopoly.

What is left to them? They must be arguing that this a per se violation of Section 1; and how in Heaven's name can they argue that it is a per se violation of Section 1 when Congress passed the Bank Merger Act of 1960? I ask you that.

Now my presentation has been to attempt to demonstrate that while we don't believe that the Sherman Act is appli- [fol. 7013] cable, nevertheless, if it is, this merger does not offend or fly in the face of the Sherman Act prohibition. I will go further. Even if the antitrust statutes are applicable, the public interest requires that this merger be approved.

After all, the antitrust statutes, like all laws enacted by Congress, are presumably the expression of the public

will. In the administration of them they should not be interpreted in a particular case such as this bank merger by a careless analogy to industries which are not comparable, nor by an easy application of rigid and universal formulae.

The Sherman Act was not enacted to provide a doctrinaire exercise for the Department of Justice and the Antitrust Division. The antitrust statutes were enacted in the interest of the public which has to live by them and I urge Your Honor in the public interest to so interpret them as to approve this merger, which is a merger desired by customers of the banks, by the other banks in the Philadelphia area, by the representatives of business and industry, by the officials of the City; in short, by the entire public with the glaring exception of the Attorney General of the United States.

Thank you, Your Honor.

[fol. 7014] The Court: We have had an hour and five minutes. Suppose we take a short recess.

(A recess was had.)

The Court: Mr. Price.

ARGUMENT BY MR. PRICE

Mr. Price: With Your Honor's permission, I should like to consider three aspects of this case:

No. 1 the Clayton Act.

No. 2 the 1960 Amendment to the Banking Act and the extent of the authority to act of the Comptroller.

Then, finally, a brief review of the type of evidence that was offered by the Government in this case to establish what is contended to be a violation of both the Sherman Act and the Clayton Act.

First, it is our position that the Clayton Act has no significance in this case and that in no circumstances can a violation of it occur by virtue of the merger which has been proposed.

But I should first refer to the Firstamerica case which was adverted to previously this morning, and the reason why that is of no significance here is twofold—(1) that suit arose under the Bank Merger Act, which contains an

express saving clause, saving the operation of the antitrust laws even though——

The Court: Wasn't that under the Holding Company Act? [fol. 7015] Mr. Price: Yes, sir, under the Holding Company Act, and the Holding Company Act contains a saving clause in favor of the antitrust laws; and (2), of course, it was a stock acquisition because it was a holding company operation rather than a merger such as this.

Now we have in this case, of course, a precise and direct interpretation of the language of the Clayton Act which, if this were not a bank, would be applicable; and that was in the Arrow-Hart case which has been referred to, where the Supreme Court of the United States construed the language of Section 7 of the Clayton Act as originally enacted in 1914. That was that no corporation engaged in commerce should acquire the stock or other share capital of another corporation and so on.

That was expressly held in the Arrow-Hart case not to apply to a merger. The Court said the statute does not forbid the acquirement of property or the merger of corporations; so that the Supreme Court there declared that that language, as it then existed, did not apply to a merger.

So far as the du Pont case, which was referred to also this morning, is concerned, that was the first case in which the Supreme Court of the United States held that a vertical merger came within the scope of the Clayton Act. All the [fol. 7016] opinions that had been rendered before by the F.T.C. and others were that that did not apply to a vertical merger, and that is the only significant point in that decision so far as this case is concerned; but this is not a vertical merger. This is not the creation of a subsidiary as it might have been under the Holding Company Act. This is a merger and that has been declared to be an asset acquisition as distinguished from a stock acquisition.

Of course, the reason why the Government would like to make the Clayton Act applicable is because the Department of Justice considers it doesn't have to prove so much under the Clayton Act, and they tried to get the Clayton Act construed in such a way as to extend to this type of operation in the Celanese case; but there the Court said Section 7 was not intended to apply to the acquisition by one corporation of the assets of another, or the open unit-

ing of the business of two or more corporations by legitimate reorganizations, consolidations, or merger. That case was decided in 1950, so that the Department of Justice tried then to get the Court to accept its interpretation of the Clayton Act as being applicable to the acquisition of assets in a merger.

Between the time of the Arrow-Hart decision in 1934 and 1950, when the Clayton Act was amended by the Celler-[fol. 7017] Kefauver Act, there were a number of efforts made to get Congress to change the language of the Clayton Act, of Section 7, and during the period between 1921 and 1949 there were 21 separate bills offered to accomplish that result. They were always rejected by Congress, so that until 1950 Congress had consistently refused to accept this notion that stock acquisitions, that asset acquisitions, should be subject to the Clayton Act.

[fol. 7018] Now, in 1950 the amendment that was then adopted provided that the asset acquisitions should be subject to the Clayton Act, except that it would apply only to corporations that were subject to the jurisdiction of the Federal Trade Commission, and under the Federal Trade Commission Act banks are expressly exempted from that provision of the statute, and therefore the effect of the 1950 amendment was to exclude banks from the new provision which made asset acquisitions subject to the provisions of the statute and left them in precisely the same position as they had been before.

The Court: Just a moment. Doesn't that say that:

> "No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital, where, in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition or tend to create a monopoly," without reference to the Federal Trade Commission?

Mr. Price: No, sir, you are reading now the original form of the Clayton Act, Section 7, as adopted in 1914.

[fol. 7019] The Court: All right.

Mr. Price: Now, in 1950 the amendment added words which the Department of Justice has not seen fit to print in its brief. They have been omitted, but they are, ". . . and

no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire . . ."

The Court: This is the 1950 amendment that I am now reading.

Mr. Price: ". . . stock or other share capital, and no corporation subject to the jurisdiction of the Federal Trade Commission . . ."

The Court: It says that too, but doesn't it also include corporations engaged in any line of commerce?

Mr. Price: Oh, yes.

The Court: Well, if this is engaging in a line of commerce without reference to the Federal Trade Commission, isn't that subject to the provisions of the Act?

Mr. Price: It would be if it were a stock acquisition.

The Court: That is just the point that they are arguing in this case, that it is.

Mr. Price: Yes, sir, and I am going to come to that in a moment as a question of what the facts are, but I think that should be clear before I get to the distinguishing facts, [fol. 7020] what the Act itself provides, because the Government has left out of its quotation, in the early part of its brief, the section, the statute, the significant words that no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets.

That is the assets clause which was added for the first time in 1950. Between 1914 and 1950 it applied only to stock acquisitions, so that the only change that took place pertinent to this controversy in 1950 was the inclusion for the first time of an asset acquisition, but——

The Court: I don't understand that the Government is arguing that in this case, the asset acquisition. Maybe I am wrong. They are talking under the Clayton Act of stock acquisitions.

Mr. Price: That is right. They are claiming that this is a stock acquisition.

The Court: They say, and I think they expressly disaffirmed this morning, if this were an asset purchase as they view it, they wouldn't be here.

Mr. Price: Well, that is the position they take now, but the fact that this change took place in 1950 I think has this significance, because Your Honor asked this morning why

the Department of Justice had not brought suit before this.

[fol. 7021] The Court: That is right.

Mr. Price: In similar circumstances. Now, the reason why they didn't bring suit before this in similar circumstances is that they consistently and frequently announced that they had no authority to bring such suits under the Clayton Act, and that has been the position of the Department of Justice for a great many years.

The Court: They said the same thing in 1917 about the acquisition of General Motors stock—do you remember—by duPont. Since then they changed their minds.

Mr. Price: They did, but as far as the Department of Justice is concerned, they have been appealing to Congress for a number of years to make the change in Section 7 of the Clayton Act which would enable them to bring suit, for the purpose of being able to advance a philosophical doctrine or an economic doctrine which has not yet found acceptance in Congress.

Attorney General Brownell in 1957, for example, said:

> "On the basis of these provisions the Department of Justice has concluded, and all apparently agree, that asset acquisitions by banks are not covered by Section 7 as amended in 1950."

[fol. 7022] Now, asset acquisitions were what the Supreme Court in the Arrow-Hart case called what happened when you had a merger. The merger consisted in an asset acquisition as distinguished from a stock acquisition, so that accepting that, the Justice Department has consistently for five or six years taken that position and they have appealed constantly to Congress to amend Section 7 in order to make it possible to bring the kind of suit which they now for the first time claim they can bring anyhow.

In 1955 Attorney General Barnes took the same position. In 1956 he appealed again to Congress to amend the law. In 1958 Assistant Attorney General Bicks appealed to Congress, in the consideration of this Bank Merger Act—

The Court: The same expert in this case?

Mr. Price: Bicks?

The Court: Yes.

Mr. Price: Bicks was the one who expressed an opinion in this case which the Attorney General now relies upon

as an expert, but he was at that time a partisan asking Congress to accept an economic theory which nobody had been willing to accept and hasn't yet for that matter, but in 1959 Deputy Attorney General Walsh made the same appeal, and Attorney General Rogers in 1959, in a telegram to Senator Robertson, when they were considering the present Bank Merger Act, made the same appeal and said [fol. 7023] that they desired Section 7 to apply to mergers so that they could follow the course which they now profess to be able to pursue, but Congress uniformly rejected that appeal, and on pages 8131 (volume 105) and 12927 (volume 107, daily edition) of the Congressional Record Senator Robertson reiterated the position of Congress that Section 7 of the Clayton Act does not apply to the acquisition of bank assets which, under the Arrow-Hart case, is a merger.

Now, in order, therefore, to justify the argument which the Government through the Attorney General is presently making, they have to pretend in some fashion that this particular merger is different from every other merger that has ever taken place and that it is a stock acquisition as distinguished from an asset acquisition. That is a little like trying to determine whether it is Monday or Thursday by a process of pure reasoning. The only way you can determine that kind of question is to look at the calendar, and here that means looking at the agreement. The agreement is not a stock acquisition; and to use the illustration that Your Honor offered this morning of the stockholders of Girard coming into the bank building and offering their shares of stock, if they merely offered them and a clerk on the other side of the table stamped with a rubber stamp the name of the new company and the proportion of shares that each one of those certificates represented, precisely [fol. 7024] the same result would have been accomplished as has been provided for under the terms of this agreement. All that the agreement says is that the stockholders may exchange their certificates by giving them to a clerk in the new bank, who will give them another piece of paper with their name and address typed on it, and I suggest here that even looking at the contract even carelessly, no one could reasonably come to the conclusion that this is anything other than an asset acquisition.

The stockholders of the Girard have not been required by this agreement to do anything except have an exchange of the shares represented by their present ownership for the shares with the new name on them, but they correspond with the proportional share of the assets of the company which had been transferred by operation of law under the Banking Act. The Banking Act itself says in so many words that this shall constitute automatically a transfer of assets.

The Court: Well, actually, anyone that doesn't want to go along can make some money by dissenting and asking the Comptroller to fix the value of the shares, can't he?

Mr. Price: That is right; that is right. So it is quite different from a stock acquisition which the Attorney General is now trying to pretend that this transaction is, and the only way that he could get in under the Clayton Act is to have somebody say this is a stock acquisition.

[fol. 7025] The Court: He says it.

Mr. Price: He says it.

The Court: Yes.

Mr. Price: The contract doesn't. The Supreme Court has said that this kind of transaction isn't a stock acquisition.

The Court: He said your contract as drawn makes it.

Mr. Price: All I can say is look at the contract, and I suggest that the contract doesn't say any such thing, and therefore Section 7 of the Clayton Act does not apply, because it applies only in the event of asset acquisitions which are made by companies that are subject to the Federal Trade Commission.

The Court: Well, he admits that you are not subject to that.

Mr. Price: That is right, and having admitted that, that takes us out from under the provisions of the Clayton Act.

The Court: He doesn't agree with you.

Mr. Price: I know.

The Court: But you say that it does?

Mr. Price: I say that it does, and I refer Your Honor, [fol. 7026] not to the Department of Justice's statement as authority, but to the contract itself.

Of course, if the Clayton Act did apply to this kind of situation, a bank acquiring assets in this manner, it would create the rather startling if not absurd situation of requiring the Federal Reserve Board to adopt one test for the

purpose of approving a merger where the resulting bank was a state bank, as distinguished from a national bank, and yet that same Federal Reserve Board is required under the terms of the Act to enforce the provisions of it, and if, therefore, the test of enforcement is the Sherman Act or the Clayton Act or some antitrust act, the Federal Reserve Board would be in the position of bringing an action, as it did in the Transamerica case, bringing an action to enforce what it considered to be the provisions of the antitrust laws, which applied to the transaction, in contradistinction to its own action approving a merger under the tests that are applied in the 1960 amendment to the Banking Act.

That comes about only because the Federal Reserve Board is charged with the duty of enforcing the provisions of the statute, along with the Attorney General, but they can do it independently of the Attorney General and don't have to rely on either the Attorney General's assistance or advice, but can do it on their own entirely, so they would be required to apply two different tests to the same trans- [fol. 7027] action if the Clayton Act should apply; and that brings me to the question of whether or not the amendment of the Banking Code in 1960 indicates that Congress had a different point of view toward this entire problem, and I pass over the question of whether or not the Clayton Act would apply, whether the Clayton Act has been violated, even if it would apply, because Mr. Littleton has covered fully the factual aspects of the case, but in doing so I will refer only to the two decisions which indicate that the Government, in prosecuting their case under the Clayton Act, has to prove a great deal more than they have proven here.

The reference in the U. S. versus duPont Company in 1957—that was the General Motors case—was that under Section 7 the Government must prove the likelihood that competition may be foreclosed in a substantial share of the effective market. Mr. Littleton has pointed out that there has been no testimony from anyone familiar with this market that such a result would be accomplished; and then, so far as the purely mathematical test is concerned, the Court of Appeals of our circuit, in the Erie Sand and Gravel Company case, 291 Fed. 2d, said, where there was sub-

stantially less than one-half of the total commerce in concrete involved, that the conclusion might be that there [fol. 7028] had been some violation of the Clayton Act, but that result is far from obvious, therefore indicating that there had to be some affirmative testimony to show that such a mathematical relationship was significant in itself, before there could be a legal determination that the Clayton Act had been violated.

Now, so far as 1960 is concerned and the amendment of the Bank Code in that year: The tests that had been incorporated in the statute under that amendment are quite different from the tests that would be applied under any of the antitrust laws. That Act adopts a public interest standard for the approval of a merger, rather than an exclusively antitrust standard. The significant elements which the Comptroller and the F.D.I.C. and the Federal Reserve must look to in determining whether or not a merger should be approved are, of course, the financial history and condition of the banks, adequacy of capital structure, future earnings prospects, and character of its management, and so on; but then there is also the requirement that they consider the convenience and needs of the community to be served.

That is something which the Department of Justice now says is a matter of no consideration whatever, and when we offered evidence to show that this was advantageous to [fol. 7029] the community, this merger would be advantageous to the community, they took the position that that was immaterial under the terms of the antitrust laws; but Congress has said that that shall be a test to determine whether or not the merger should be approved in the first place.

Then, in addition to that—in addition to that, not in substitution for it—the statute goes on to say that they shall also take into consideration the effect of the transaction on competition, including any tendency toward monopoly, and then that the merger shall not be approved unless, after considering all of such factors, not just one of them, not just the one relating to competition, but all of such factors, he finds the transaction to be in the public interest.

Now, in order to determine whether the transaction is in the public interest, after weighing all of the several factors,

including the possible effect on competition, the Comptroller is directed to request a report on competitive factors from the Attorney General, also from the Board of Governors of the Federal Reserve system and from the F.D.I.C., so that the Comptroller will be advised by those three others of their opinion, so that he may weigh their opinion and his own opinion and such facts as he may have against all the other factors that are involved in the re-[fol. 7030] quirements of the Banking Act, and then after he has weighed them all and concluded that the result is in the public interest, then, if he finds it is in the public interest, he approves the merger. If he finds it is not, whether it is contrary to some suggestion of the Attorney General on the subject of competition, if he finds it is not in the public interest on any ground, then he disapproves it.

So I say to Your Honor that this statute now shows a purpose on the part of Congress to adopt a public interest standard in determining whether a merger shall be approved or disapproved, rather than the more limited antitrust standard, which is the only test that is being offered now as the basis for a disapproval of this proposed merger. Antitrust policies are simply things that are considered and should be considered and quite properly should be considered, but Congress itself has said that it is not the sole standard, and that is the only standard that could be applied if the test offered now by the Attorney General is accepted.

The Court: Isn't there, running through both House hearings, and even in some of the reports, at least the inference, if not the statement, that any bank merger is subject to the Sherman Act? Doesn't that appear time and time again? As I recall reading those reports and the hearings, and so forth, at least Senators, Congressmen, [fol. 7031] have said time and time again that in their opinion bank mergers were subject to the Sherman Act. Isn't that the fact?

Mr. Price: Some of them undoubtedly did, and I have quoted one or two on the brief where that statement was made.

Since the question has been raised here, and since it was also raised by this statement in the Department's reply brief, "Nevertheless, there was unanimous agreement that

enactment of S-1062 would not in any way affect the applicability of the Sherman Act or the Clayton Act to bank mergers," I should like to take a little time now to call your attention——

The Court: I didn't understand it was unanimous agreement on that.

Mr. Reycraft: In the report, sir.

Mr. Price: That is the statement in the reply brief.

The Court: What report?

Mr. Reycraft: I beg your pardon for interrupting, but it is in the House report.

The Court: The House report? I have it right here. What page?

Mr. Reycraft: Page 9.

The Court: All right. Let me check it, Mr. Price, if you don't mind.

[fol. 7032] Mr. Price: Yes. I would be glad to have you do that, if you would.

Mr. Reycraft: It is at the bottom of the first paragraph, sir.

The Court: "S-1062 would not in any way affect the applicability of the Sherman Act or the Clayton Act to bank mergers."

Here it is.

Mr. Price: Now may I call Your Honor's attention to the Senate report, where the Senate Committee said:

> "The committee wants to make crystal clear its intention that the various banking factors in any particular case may be held to outweigh the competitive factors and that the competitive factors, however favorable or unfavorable, are not in and of themselves controlling on the decision."'

So that the Senate consistently took the position that the amendment which was ultimately adopted—suggested by the House and adopted—did not change this philosophy, which was that the public interest standards should be accepted rather than the narrower antitrust standards.

Senator Fulbright, when he was speaking of the con-[fol. 7033] currence in the House amendments, said:

> "S-1062 was a clear statement for the third time of the Senate's view that the provisions of Section 7 of

> the Clayton Act should not apply to bank mergers. The amendments to 1062 made by the House do not change this aspect of the bill. The House has agreed with the Senate that bank mergers should be controlled by the Federal banking agencies on the basis of both banking factors and competitive factors and that Section 7 of the Clayton Act should continue to be inapplicable to bank mergers."

So that at least Senator Fulbright believed that the Senate, in passing this bill, had preserved this same position of antagonism to making bank mergers subject to the restrictive provisions of Section 7 of the Clayton Act.

Now, that is an emphasis on the public interest standard which the Senate certainly thought it was adopting in the adoption of this 1960 amendment which was then called S-1062.

Your Honor will remember, from having read not only the reports, but I guess some of the Congressional Record of the debates which followed the adoption of the reports, that there was a suggestion by one or more of the Senators, [fol. 7034] at least, that there did not have to be a precise amendment adopted to change the tests that might have been applied to bank mergers before under the Sherman Act, but that the later statute, showing an inconsistent view, would be sufficient to be controlling.

Of course, the Supreme Court of the United States has recognized that, and in the case of Minneapolis and St. Louis Railroad against the United States, the Court said:

> ". . . there can be little doubt that the Commission is not to measure proposals for all-rail or all-motor consolidations by the standards of the antitrust laws."

And I submit, sir, that this amendment of 1960 of the Banking Code accomplishes the same result, and therefore the Courts thereafter should not measure bank mergers by the standards of the antitrust laws but by the standards that are set up in this amendment, which are the public interest standards, which require the Comptroller in this case to consider the benefits to the community of the proposed merger.

Your Honor I think referred this morning to the general subject of whether competition was something that should be accepted as a rule of conduct in this country, and I call Your Honor's attention to the case of FCC versus [fol. 7035] RCA Communications, where the Supreme Court of the United States said:

> "That there is a national policy favoring competition cannot be maintained today without careful qualification. It is only in a blunt undiscriminating sense that we speak of competition as an ultimate good."

Following that view the Senate report also said this about the method to be followed by the banking agencies in determining whether mergers were good or bad:

> "The basis for handling banking through banking laws, specially framed to fit the particular needs of the field, instead of relying on unrestricted competition and the antitrust laws, is set forth in 'Banking Under the Antitrust Laws,'" and it referred to an article by Mr. Berle.

But the Senate report itself said:

> "But it is impossible to require unrestricted competition in the field of banking, and it would be impossible to subject banks to the rules applicable to ordinary industrial and commercial concerns, not subject to regulation and not vested with a public interest."
>
> "Because banking is a licensed and strictly super- [fol. 7036] vised industry that offers problems acutely different from other types of business, the bill vests the ultimate authority to pass on mergers in the Federal bank supervisory agencies, which have a thorough knowledge of the banks, their personnel, and their types of business. For the same reason, the bill requires consideration of the six banking factors now listed in Section 6 of the Federal Deposit Insurance Act."

So that the approach that was made I think more vociferously and clearly and conclusively by the Senators who

were discussing this subject indicates that the antitrust laws were subsidiary to the general welfare test and the public interest test which the amendment provided for.

Let me call Your Honor's attention to the statement by Senator Fulbright which appeared on page 8144 (volume 105) of the Congressional Record, May 14, where he said:

> "With respect to court review—" this is apropos of whether or not the antitrust laws should be applied and therefore get into court, and it followed the suggestion of Senator O'Mahoney that resulted in the rejection of an amendment that he offered, which I will refer to in a moment—but Senator Fulbright said, just *before this bill* was adopted by the Senate: "With [fol. 7037] respect to court review, I submit that the evaluation of such factors as the banking agencies must consider, such as character of the management, adequacy of the capital structure, and convenience and needs of the community, are not factors capable of court determination. They necessarily involve evaluation based upon specialized experience and knowledge which neither the Attorney General nor the courts possess.
>
> "The committee bill, as amended, gives the Attorney General a voice in the only question in which he has a legitimate interest—competition. The O'Mahoney amendment gives him a veto, because he could throw the whole question into public hearings and court review which no bank would risk."

Now, the philosophy back of that statement, I submit, sir, makes sense, because the Comptroller here has, from his own records, from the experience of his office, from the reports of the Federal banking examiners, all the information which it took two months to present to Your Honor last spring.

The Comptroller knows the answers to all these questions that are now presented for decision, and by virtue of the expertese, or whatever term you wish to apply to it, by virtue at least of his experience, should be as well able [fol. 7038] as any other agency, and certainly better able than the Attorney General, who has not access to information of this sort, to make a proper determination between

the relative weight to be given the antitrust features of a proposed merger and the public interest features of a proposed merger.

Now, the Congress can accept the antitrust standards if they choose, but I submit that by virtue of this amendment they have not done so. The language of the amendment indicates that they do not want to exalt the antitrust standards. They want to subordinate them and make them at least no greater in importance than the public interest standards. They are named together in a group of six standards that are to be considered, and one is certainly not said to be of greater importance than another, to say that the Comptroller shall go through all the inquiry that is necessary to enable him to reach an intelligent conclusion based upon all of these factors, and then say, well, maybe you thought that was the answer, but we are going to sue anyhow and try to get a court to determine this question, not on the basis of the standards chosen by Congress for this particular purpose, but on the basis of standards applied by Congress in certain situations which arise in connection with ordinary business—manufacturing and selling, companies that are not charged with a public interest, that [fol. 7039] are not subject to the kind of regulation that banks are subject to. Certainly nothing in the ordinary conflict that Mr. Littleton referred to this morning, the kind of situation which allows two companies to compete until one goes broke, exists in respect to banks. Congress has indicated that they recognize that distinction and prefer, in view of the control that may be exercised by the regulatory agencies and by Congress itself, to allow the Comptroller, in cases of bank mergers, where the surviving bank is a national bank, to reach a conclusion as to the propriety or impropriety based on a consideration of all these factors, on the basis of a weighing of them by him, and not on the basis of the application of the tests which are suitable for manufacturing and selling companies but which are inappropriate for banks.

[fol. 7040] So after that statement by Senator Fulbright the Act was passed.

Now the significance of the O'Mahoney Amendment is also something that I think that I should refer to. This was a suggestion by Senator O'Mahoney that the whole

matter should be thrown into the ordinary antitrust pot, giving the Attorney General the right of review and, in effect, providing for public hearings and subsequently a determination under the purely antitrust standards.

Now that was rejected and so far as the House was concerned, apparently the opinion of important members of the House, whatever language there might have been in the record, accorded with that. Mr. Spence, speaking on page 7257 (volume 106) of the Congressional Record of 1960 said,

> "This puts control in the banking agencies, which have expert knowledge of the problems involved. At the same time, they will be required to get a report from the Attorney General, whose experience in the antitrust field qualifies him to furnish valuable advice in the administration of the bill."

Then he said,

> "This puts the responsibility for acting on a proposed merger where it belongs—in the agency charged with supervising and examining the bank——"

[fol. 7041] Namely, the Comptroller.

Also from the House Record on page 7259 (volume 106) in 1960, Mr. Multer said, speaking of the language of S.1062,

> ". . . makes it clear that the competitive and monopolistic factors are to be considered along with the banking factors and that after considering all of the factors involved, if the resulting institution will be in the public interest, then the application should be approved and otherwise disapproved."

So, sir, I think that although you can find by reference to all of the statements that have been made on this subject in the House debates and in the Senate debates and in the reports of the House and Senate Committees, and perhaps in the Conference report, statements which may be antagonistic to this view, if you are attempting to weigh them or try to evaluate the final opinion of the Congress when that was adopted, I think that you will be forced to come to the conclusion that what Congress thought it was doing

(whether it did, of course, is up to the Courts to decide ultimately) was to establish a different standard for bank mergers than would normally be applied under the anti-trust laws to mergers of ordinary business concerns, manufacturing and selling companies; and that because of the peculiar nature of banks, the type of regulation to which they were subject, and the type of control that could be [fol. 7042] exercised in this case by the Comptroller over future suggested mergers, there was no reason to be concerned as one might be in the case of manufacturing companies where there was no control that could be exercised except by lawsuit.

Here every merger has to be approved by a Federal regulatory agency, so that if this dreadful situation which the Department of Justice now contemplates of all the banks trying to merge into just one bank arises, if anybody tried that one on and it was considered to be contrary to the public interest, the Comptroller is there to prevent it, the F.D.I.C. is there to prevent it, and the Federal Reserve Board is there to prevent it.

So that it isn't a free situation in which the will of the participants is given free rein, but the control continues.

Another illustration of the type of control that is to be exercised is that in these mergers under this Act the Comptroller is charged with the obligation of reporting annually to the Congress of the mergers that he has approved.

Why? So that Congress can see annually, from time to time, whether the Comptroller is acting within the terms of the statute and of the authority given him, or whether [fol. 7043] he is exceeding it or doing something of which Congress disapproves.

Now an illustration by way of passing may be found in the original Clayton Act, Section 7, which failed to refer to asset acquisitions because back in 1914, when one company was going to take over another they usually just bought up the stock, they didn't buy the assets or they didn't merge in the present form; but as soon as that became subject to the Clayton Act suddenly the practice changed and it was only because Congress found that there was a different approach to the subject of merger in the ordinary business deal, that they amended the Clayton Act, Section 7, to include after that "Asset acquisitions, except for

banks;" so that both types of acquisitions would be covered.

Now Congress has retained the control here itself by requiring annual reports so that the Senate and the House can see exactly where this act is leading and determine whether or not any further amendments are necessary; but in the meantime they have given the Comptroller and the other two agencies the authority to decide this in the first place until Congress acts again.

Now I can say that there is a perfectly good reason why they selected the Comptroller for one type of bank and the F.D.I.C. for another. The Comptroller, through the bank-[fol. 7044] ing examiners, is much more likely to be familiar with the conditions of national banks than any other agency, so he determines it when the surviving bank will be a national bank.

When it is a state bank, a member bank, the Federal Reserve is charged with that duty, and when it is not a member bank then the F.D.I.C.; so that the three banking agencies are those which were given the authority to make this final determination, not the Attorney General. The Attorney General's advice is directed to be sought, but his determination or his decision or his opinion is not binding. He is not given the authority to enforce the Act. That is something entirely outside of his field, except within the limits of the 1960 Amendment.

Now one more thing about the 1960 Amendment as to the purpose of this language, and I will call Your Honor's attention to page 9713 (volume 106) of the 1960 Congressional Record, where there was put into the Congressional Record in order to make clear to the banking agencies which will administer this Act the understanding and intention of the Senate in accepting the amendments of the House and passing the amended bill.

There were then introduced into the record six questions and six answers, and it is not my purpose to read them all or even a substantial part of them, but I would like to call [fol. 7045] attention to one or two.

First, as to the question of size, the question was whether such a merger would increase the extent, quality, and efficiency of services rendered to the public, enhance local, regional, or national competition, and meet all the other specific tests in the bill, would not such a merger be con-

sidered to be in the public interest under this bill regardless of size?

The answer was, yes; size has nothing to do with this in itself. That is merely something to be considered and, therefore, the adding machine test which the Attorney General has applied to this merger does not prove anything by itself. It must be accompanied by some evidence to show that the particular size which results will have a deleterious consequence.

Included in the answer is this sentence:

> "But it is not controlling. If a merger of two large banks qualifies under the tests set forth in the bill, it should be approved and it will be approved, no matter how big the two banks may be."

As to the competitive factor, it was suggested that that was something which the Attorney General should give advice about, but it was merely one of the six.

On the subject of the needs of the community, the ques-
[fol. 7046] tion was:

> "In considering a proposed merger should the needs of the community and the area and the country as a whole for increased financial services resulting from an expanding economy be considered"?

That is the situation which has been shown to exist in Philadelphia. The answer to that was yes:

> "This would not, of course, be the controlling factor any more than any other single factor and, of course, other means of providing increased financial services would be borne in mind.
>
> "But there is no question that the Federal banking agency should give due regard to the adequate accommodation of the growing capital requirements of an expanding economy."

That is what the Comptroller has done here. He has given consideration to that, and yet the Department of Justice now says that convenience, good, benefit to the community are something that should be ignored and have no basis for consideration under the antitrust laws. He may be

right so far as the antitrust laws are concerned, when you get beyond the rule of reason; but the Senate has said differently so far as the applicability of this statute is concerned.

So that the six questions and answers are there for Your [fol. 7047] Honor to consider and they point up, I think, perhaps as clearly as anything else that appears in the Congressional Record the purpose of the Senate and the purpose of the Congress in adopting this new type of regulation, new form of approval to be given to mergers, so that the control would be in the banking agencies where they belong rather than kicked around from pillar to post, subject to suits by the Attorney General whenever he got around to it; and, as in this case, after trying for five or six years to get the Congress to amend the law, unsuccessfully, now suddenly there is a rash of suits brought to try to accomplish the same purpose, the same economic purpose of the Department of Justice, indirectly by subjecting the banks to the additional expense and hazards of litigation after they have followed the course plotted by Congress for their approval.

Only one more thing on this. In the House Report, referring to this same general subject, the House Report said Congress by no means intended that the approvals of mergers by the banking agencies would be left completely without any independent scrutiny. The reason for the requirement of annual reports of approvals to the Congress was to permit the Congress to review the administration of the Act on a case-by-case basis, thus recognizing that there was continuing control, even though not subject to the Sherman Act.

[fol. 7048] Now I would like to review very briefly the kind of evidence that was offered in this case by the Government to establish what it asserted to be the issues that the suit raised, whether competition would be diminished and concentration would be too great.

On page 38 of their brief their position is stated in this language:

> "It is the government's position in this case that the fundamental illegality in this merger is its substantial suppression and elimination of competition between nationally-ranked leaders in a local market already

highly concentrated. It is asserted that this merger may, and in fact will, substantially lessen competition and tend to monopoly."

Now that raises the question first, how would this all be accomplished. What is there in the evidence in this case which would indicate first that those results would occur; and, second, if they did occur, what harm would they do?

Your Honor will remember that they called nine bankers, none from Philadelphia. The closest was MacMillen from New York; the next closest was Brumbaugh from a small town upstate, but he had been Commissioner of Banking. Your Honor will remember that he disclaimed the ability [fol. 7049] to express an opinion on the validity of this merger or the usefulness of the merger and said he hadn't studied it and couldn't do it.

The others, however, were men from little towns scattered all over the United States, who had been presidents or past presidents or other officers of the Independent Bankers Association, which Your Honor will recall had what they called a creed, which was antimerger.

But the kind of people that they called, the kind of people that these were, were presidents of small banks in small towns, the Bank of Granite Falls, North Carolina, with a population of 3,000; Mr. DuBois, Sauk Centre, Minnesota, with a population of 3,500; and he was so pleased with himself that he said, after he sat here for a week, he thought he could express an opinion about banking in Philadelphia. Then Mr. Hansen, Elk Point, South Dakota, population 1,500; Mr. Hardin of Pleasanton, California, population 4,000.

Those are the people that the Department of Justice produced in order to show that something in Philadelphia might be wrong. Now all of those men knew their own little communities, no doubt; but all disclaimed any knowledge whatever of Philadelphia and I suggest to Your Honor that the failure of the Government to produce any-[fol. 7050] body more substantial than that indicates that they were totally unable to find any competent evidence of damage that would result from this merger, from the banking point of view.

We called, in contradistinction to them, presidents or chief executives or other officers of banks in Philadelphia,

all of whom contradicted the charge made in the complaint in this case; and I don't propose to review the type of evidence. I merely call your attention to the fact of the quality of the witnesses themselves who testified.

So that so far as the banks were concerned, the banking competitors of the two merging banks in Philadelphia, who were called here, all testified that in their opinion competition would be increased by this merger, not diminished.

Now if the Government had thought that there was to be any deleterious effect from this merger they could have brought somebody not from Pleasanton, California, but somebody from San Francisco, California because San Francisco furnishes a very similar situation to Philadelphia in two respects: One, San Francisco is a great seaport, as Philadelphia is. It differs from Philadelphia, however, in that it is not a large manufacturing community. It is slightly smaller than Philadelphia; its population in the metropolitan area is only 2,200,000, whereas Philadelphia's is 3,700,000.

[fol. 7051] Instead of bringing somebody from San Francisco to say we have a somewhat similar situation here, with one or two very large banks and a lot of small banks, and this is the result, they didn't; they brought the little fellow from Pleasanton who, although he was in competition with the Bank of America, which has a lending limit of $55 million, said that he was doing just fine in competition with that bank.

Yet, upon the over-all picture San Francisco would have been a very good illustration if there was any basis for this contention because there are four banks in San Francisco with large lending limits—the Bank of America, with $55 million; the next bank is $15 million, the next is $12 million, and the fourth is $10 million; and then there are 13 or 14 other banks, so that the number of banks in the community is about the same as Philadelphia.

But unlike Philadelphia, although it is smaller, it has four banks vastly greater in size than any in Philadelphia and the two largest would be larger even after this merger if it is approved than the merged bank; so that community has a situation which is perfect for illustrating the contentions of the Department if the contentions have any foundation in fact whatever; and yet they didn't bring anybody from that community.

[fol. 7052] The communities that were referred to by Mr. Littleton this morning, which are set forth in our requests for findings of fact, showing the number of cities with much greater concentration than there would be in Philadelphia after this merger—not a single witness came from those areas.

It is not a question of whether Philadelphia would just like to be as big as other areas. That isn't the point of this question of whether they produced the evidence or not.

The question is whether the evil which is predicted would result from the situation which would exist after this merger took place; and yet, with all the opportunities that they had for producing evidence of that sort, they failed to produce any; and that is the significance of this situation in other communities, not that Philadelphia is entitled to concentration, as Mr. Reycraft said. They are not entitled to concentration.

I say that the business community in Philadelphia is entitled to service, adequate service from the banks; but that is not a question of being entitled to concentration just because some other area has concentration. It is because the concentration in banking is not an evil word as the Attorney General suggests; it is merely an indication of a [fol. 7053] size adequate to take care of the needs of the community.

Your Honor will no doubt remember that Mr. Jennings testified that in his experience, which was a very large one in the Comptroller's office, the concentration which had developed over the years in certain areas was a natural and to-be-expected result of the demands of the business community. As the business community grew banks had to grow with them; so that concentration (not an evil word or a word connoting something bad or wrong or to be avoided) is merely an indication of the requirements of the community, and these four banks in San Francisco couldn't possibly exist in that size if there weren't a need for them; and if they were destructive of the small banks, the other 14 or 15 banks in San Francisco, there would have been evidence of it, but they are all continuing there and have been, each meeting its own need.

There is a much greater discrepancy in that city than there is in Philadelphia, but because of our distribution of

banking concentration, size of banks, if you will, it is much more gradual from the top to the bottom than it is in San Francisco.

When we consider that in New York there are 17 banks with a lending limit in excess of $1 million and four banks that have a lending limit greater than the entire combined [fol. 7054] lending limit of all the Philadelphia banks, we see that this bugaboo of concentration is meaningless in itself.

Now so far as this merger is concerned, the community wants it. The competitors have all said that it will improve their situation and that they would be glad to have it.

We called representatives of big business and little business to show that in their opinions this would be beneficial to the community, so that the ordinary situation of elimination of competition, destroying the opportunity to get service, doesn't exist.

The Government suggests (and you will remember how much time was spent considering) Sylvan Pools, and all the evidence about Sylvan Pools and whether they could get adequate banking service came from inter-office memoranda, but not a single representative from Sylvan Pools was called to say that he thought there would be something wrong with the merger and they wouldn't be able to get adequate banking service.

So that the only evidence in the case, as distinguished from estimates, from people like Professor Goodman, whom even the Government has abandoned now, and from Professor Smith, who came up with an algebraic formula in order to prove something which was rather obscure—he [fol. 7055] said that his formula was rather hard to follow, if you remember, and he made assumptions which the evidence showed to be untrue, but since they were not in accordance with his theory he rejected the evidence and went on with his assumptions.

That is the only evidence that the Government has except what can be produced by an adding machine, and I suggest that because banks are service institutions which have to meet the demands of the community, the Court, in considering whether or not this merger violates any law, should look at the facts of the case and not simply columns

of figures where you reach a certain percentage and say, well, if it is that big it must be wrong.

Everybody in this area wants the merger who has testified and the Government hasn't produced anybody to say they don't want it. As Mr. Dilworth put it, the Government is trying to freeze Philadelphia into a position of inferiority to New York; "Keep them in short pants," I think was his phrase.

But if this merger is not approved then they will remain in that position of inferiority to New York and allow all of the business which normally and rightfully belongs in Philadelphia to gravitate to that larger community simply because they have the capacity to render the service that the local community needs but can't get.

[fol. 7056] What the Department of Justice is trying to do here is not to enhance competition, but to stifle it. It is trying to make it impossible for two banks here who have the energy and will to try to go out and meet the competition that now comes from New York, to try to serve the members of the business community (in the larger business community), give them the kind of service which they have asked for and said they would like to have—that, they are trying to prevent; in other words, telling the business people here, the banking people here, you have got to do your business the way we say you ought to do it, because we think that's better than the way you want to do it yourselves.

I submit that there is nothing in the antitrust laws, even if they are applicable, to sustain that position; and certainly nothing under the terms of the Banking Act, Amendment of 1960, which adopts the public interest standard as distinguished from the narrow antitrust standard.

Closing Argument by Mr. Reycraft

Mr. Reycraft: I will be brief, Your Honor.

I would like to hand Your Honor a handbook. All of the material in this handbook, I might say, consists of the legislative history of the Clayton Act and the House and Senate reports and opinions on the Clayton Act, which might be convenient for Your Honor.

[fol. 7057] The Court: Do you mean I can take that along with me?

Mr. Reycraft: Yes, sir.

After hearing Mr. Price and Mr. Littleton talk about the Bank Merger Act of 1960 I have re-read, I must say, the introductory paragraph to the Senate report on the Bank Merger Act and it describes the purpose of the amendment,

> "To provide safeguards against mergers and consolidations of banks which might lessen competition unduly or tend unduly to create a monopoly in the field of banking."

This hardly sounds like the kind of legislative intention to me to give an exception to banking, which is apparently what Mr. Price thinks it has done.

I would also like to call Your Honor's attention again to the fact that following the statement in the House Report that the bill would not in any way affect the applicability of the Sherman Act or the Clayton Act to Bank mergers, the House Report was unanimous, and that is a flat unequivocal statement and I don't see how the committee could have been any more clear in expressing their intentions.

The sponsor of the bill in the Senate and the Chairman of the Senate Committee on Banking and Currency, Senator Robertson, said,

[fol. 7058] "Any rights which the Attorney General has with respect to the antitrust laws, he would continue to have under the bill."

That is on page 70 of our brief.

The Senate Report also distinguishes the Interstate Commerce Act which does immunize from the antitrust laws certain mergers by saying that section provides an exemption from the Sherman Act, as well as the Clayton Act—a provision not contained in S.1062.

There has also been a good deal of discussion here of the public interest standard, which the Comptroller and the other bank regulatory agencies apply. This same standard is applied by the Federal Communications Commission, for example, and in the RCA case, U. S. versus RCA, in 358 U. S. 334, Chief Justice Warren made a statement:

"Appellees, like unregulated business concerns, made a business judgment as to the desirability of the exchange. Like unregulated concerns, they had to make this judgment with knowledge that the exchange might run afoul of the antitrust laws. Their decision varied from that of an unregulated concern only in that they also had to obtain the approval of a federal agency. But scope of that approval in the case of the FCC was limited to the statutory standard, 'public [fol. 7059] interest, convenience, and necessity' . . . the monetary terms of the exchange were set by the parties, and were of concern to the Commission only as they might have affected the ability of the parties to serve the public. Even after approval, the parties were free to complete or not to complete the exchange as their sound business judgment dictated. In every sense, the question faced by the parties was solely one of business judgment (as opposed to regulatory coercion), save only that the Commission must have found that the 'public interest' would be served by their decision to make the exchange. No pervasive regulatory scheme was involved."

In that same case, the Supreme Court said that the Federal Communications Commission had no power to decide antitrust issues as such, and I submit that the same considerations apply in this case—that the Comptroller has no power to decide antitrust issues as such, was not given any such power, and does not have the power to immunize any merger from the antitrust laws.

As far as the characterization of a restraint of trade which Mr. Littleton has repeatedly made, I have tried my best to state that the restraint of trade we are talking about is the restraint which occurs from the elimination of all competition between the banks. Mr. Littleton talks about [fol. 7060] combining in order to restrain trade on the theory that he thinks we are saying that after these banks merge we have the view that they are going to go out and restrain somebody's trade.

The competition which we are talking about and which is entitled to be protected is the competition existing between the two banks. We think, in addition, that the transaction

will have a tendency to monopoly and that other banks in the Philadelphia area will follow precisely the same arguments as these two banks are making here before Your Honor; and if Your Honor should permit this particular merger I see no way in which the same argument could be turned down for other banks in the area.

The Court: Why not?

Mr. Reycraft: Pardon me, sir?

The Court: Why not?

You have made a statement and I am asking you why not.

Mr. Reycraft: It would appear to me to be quite illogical for Your Honor to say——

The Court: They may have reached that point that I talked about.

Mr. Reycraft: In other words, that might be the point?

[fol. 7061] The Court: They may have reached it now. That point might have been reached in another merger.

Mr. Reycraft: In other words,——

The Court: There has to be a certain mark——

Mr. Reycraft: In other words, the point may already have been reached in Philadelphia where any further merger might have a tendency to monopoly?

The Court: Yes.

Mr. Reycraft: That's very good. I certainly think it tends in that direction.

I recall Mr. Graves testifying here and reference has been made to his testimony about some aluminum company that might have located in Philadelphia if something had been different; I am not sure what.

Mr. Graves did not give us the name of the company at that time and we did not press him for it. We have ascertained on our own, however, without violating anybody's confidence (and it is a public fact) that the Reynolds Aluminum Company located in Chester on Front Street in 1961, and I must say that we rather suspect that this might be the aluminum company that Mr. Graves was talking about, and if it is located in Chester it is hardly a loss to the Delaware Valley area.

[fol. 7062] Once again, on the Celanese case, this case was decided in June of 1950. The Celler-Kefauver Act was passed in December of 1950, and the Supreme Court said in the du Pont case in 1957 that that amendment was to

make clear that the Clayton Act applied to all corporate mergers, vertical and horizontal as well as conglomerate.

I would also like to refer to some of the statements which are quoted in the defendants' brief, made by representatives of the Department of Justice.

I know from Your Honor's questioning of Mr. Price that Your Honor understands the distinction that we make between asset and stock acquisitions. Mr. Brownell, at page 22 of the defendants' brief, is quoted as saying asset acquisitions by banks are not covered by Section 7. We don't dispute that.

Assistant Attorney General Barnes said asset acquisitions do not come within amended Section 7 as far as banks are concerned.

Now Assistant Attorney General Barnes, since he has been quoted by the defendants, also said in 1956 that to apply the same Clayton Act standards to bank asset acquisitions as are now applied to bank stock mergers is our prime aim. This is also consistent with our position.

The Court: Didn't the Congress refuse to go as far as [fol. 7063] the proponents of this merger act wanted them to go?

Mr. Reycraft: Yes, sir.

The Court: Didn't they ask them to spell it out, to set up standards?

Mr. Reycraft: The proponents of the act?

The Court: Yes.

Mr. Reycraft: Yes, sir.

The Court: In the Senate Reports they very definitely state that as far as the Comptroller is concerned, the bill sets up no standards, no specific standards.

Mr. Reycraft: They are very vague; that's right. They are very vague.

The Court: It does the same thing for F.D.I.C. and the Federal Reserve Board.

Mr. Reycraft: They are very vague. It is like the Federal Communications Commission standard in the RCA case I just quoted from. They say if it is in the public interest approve it; if it it not, don't approve it.

The Comptroller's report which Your Honor has does not spell out in any way what is in the public interest and what isn't.

The Court: Nevertheless, Congress left the judgment in him.

[fol. 7064] Mr. Reycraft: As to what he would do, but——

The Court: No.

Mr. Reycraft: Yes.

The Court: Congress gave him the authority to issue approval.

Mr. Reycraft: Approval, yes.

The Court: It restrained the Attorney General, the F.D.I.C., and the Federal Reserve Board from vetoing it.

Mr. Reycraft: No.

The Court: They certainly didn't give them permission to veto it. The Comptroller must make a report; that's all they said.

Mr. Reycraft: Under the Bank Merger Act it requires the Attorney General to make a report on the competitive factors.

The Court: It required the others also to give their thinking.

Mr. Reycraft: That is precisely right, and as I——

The Court: Just as the Comptroller was precluded from interfering in an F.D.I.C. affair or Federal Reserve Board matter, doesn't he also have to give a report?

Mr. Reycraft: The Comptroller reports to the Federal Reserve Board in a merger which is of two state banks [fol. 7065] who are members of the Federal Reserve; that's right.

The Court: Yes, but he also makes a report.

Mr. Reycraft: That's right.

The Court: But he has no power.

Mr. Reycraft: That's right. That's right.

The Court: Now why did the Congress do that?

Mr. Reycraft: I think they were probably trying to promote uniform standards of enforcement.

The Court: I see. They probably were. I think that is a laudable ambition.

Mr. Reycraft: Yes.

The Court: Why didn't they make it a board and high man win? They put it back on one man.

Mr. Reycraft: As far as the bank merger statute is concerned.

The Court: You and two others disagreed, so now you are putting the problem up to me; is that it?

Mr. Reycraft: Well, as the Congress said, S.1062 does not affect the applicability of the Sherman Act or the Clayton Act in any way, like the Federal Communications Commission and the RCA case, like the Supreme Court said all that was given was a license to go ahead in their judgment if they wished to do it, with a risk that they would run afoul of the antitrust laws on something that was a matter of busfness judgment.

[fol. 7066] The Comptroller has no power to decide antitrust issues, just as the Federal Communications Commission doesn't and I submit, Your Honor, that that RCA case is very directly in point on this same issue.

It arose in this District, in this Court. I know that Your Honor is familiar with it and I think it is directly in point here.

I believe the reference that Your Honor made to the Pennsylvania Railroad case versus the ICC, although I haven't checked it, may involve Section 10 of the Clayton Act, which is a criminal statute involving failure to get——

The Court: I think probably it is. I think it is.

Mr. Reycraft: The statement was also made by Mr. Price that the Federal Reserve Board——

The Court: Although the annotation is under 18, which is the section we were talking about.

Mr. Reycraft: Yes, but,——

The Court: It is annotated under that. I just happened to see it this morning. That is why I asked the question.

Mr. Reycraft: I would think that the standards of a criminal statute would not be applicable to a civil case such [fol. 7067] as this.

Mr. Price mentioned that it would seem inconsistent that Congress would ask the Federal Reserve Board to apply two different standards, that is, to apply one under the Bank Merger Act and another one under the Clayton Act, which it also has concurrent jurisdiction with the Attorney General to enforce.

I point out that at the present time the Federal Reserve Board administers the Bank Holding Company Act and its standards under the Bank Holding Company Act. There are five banking factors which are very similar to the ones

that are spelled out for the regulatory agencies under the Bank Merger Act, and there is another where the acquisition would tend to increase the size of the bank holding company unduly or beyond what is necessary for the public interests.

So the Federal Reserve Board has to apply that standard in the Bank Holding Company Act matter, which involves the competitive standards; and they also have the duty to enforce the Clayton Act under Section 7, so they do now have exactly this problem of applying two different standards in bank stock acquisitions.

[fol. 7068] So it may not seem to some of us to be the best statutory scheme that could be devised, but it is the situation that they are in, and I submit that that type of argument does not mean that there isn't the same concurrent jurisdiction at the moment.

Mr. Price has also referred to what he calls a rash of suits since the Bank Merger Act. Well, I think it probably is in the F.D.I.C. report that is in the record that there have been over 250 bank mergers since this Bank Merger Act was passed, and there have been four suits instituted by the Attorney General involving mergers under the Act, one in Lexington, one here, one in New York, involving the Manufacturers and Hanover, and one in Chicago involving the Continental-Illinois and City Bank, so I respectfully submit that this hardly is a rash of suits, in view of the number of mergers which have taken place.

I have nothing further, Your Honor. I appreciate your patience.

The Court: All right. Now we will take it under advisement.

Mr. Littleton: If Your Honor please, this looks ominous (indicating), but I hope it is helpful. This is an index of all the testimony by witness, by volume, by subject (handing to the Court).

[fol. 7069] The Court: Thank you for all the help I can get.

May I say, gentlemen, now that the suit is concluded and I must take it under advisement and decide it, that I appreciate the thoroughness of the work on both sides. It has been a splendid presentation of two divergent viewpoints, presented, as I view it, with complete intellectual

integrity. It has been a pleasure to receive a case on that basis.

Mr. Price: Thank you.

Mr. Littleton: Thank you.

Mr. Reycraft: Thank you very much.

Reporter's Certificate to foregoing transcript omitted in printing.

IN THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA

Civil Action No. 29287

UNITED STATES OF AMERICA, Plaintiff,

v.

THE PHILADELPHIA NATIONAL BANK AND GIRARD TRUST CORN EXCHANGE BANK, Defendants.

* * * * * * * *

[fol. 7072] OPINION—January 15, 1962

CLARY, Ch. J.

This is a civil action instituted under Section 4 of the Act of Congress of July 2, 1890, as amended, 15 U.S.C. Section 4, (commonly known and hereinafter referred to as the "Sherman Antitrust Act"), and Section 15 of the Act of Congress of October 15, 1914, as amended, 15 U.S.C. Section 25, (commonly referred to and hereinafter designated as the "Clayton Antitrust Act"), in which the United States (hereinafter referred to as "government" or "plaintiff") seeks an injunction to restrain the defendants, The Philadelphia National Bank (hereinafter referred to as "PNB") and Girard Trust Corn Exchange Bank (hereinafter referred to as "Girard"), from carry-

ing out an agreement of consolidation. This agreement of consolidation was drawn up after the passage of Public Law 86-463, (commonly referred to as "The Bank-Merger Act of 1960"), amending 74 Stat. 129, approved May 13, 1960, found at 12 U.S.C. Section 1828(c), and is subject to the provisions thereof. Plaintiff herein alleges that the proposed consolidation violates Section 1 of the Sherman Antitrust Act, as amended, 15 U.S.C. Section 1, and Section 7 of the Clayton Antitrust Act, as further amended by the Act of Congress of December 29, 1950, 15 U.S.C. Section 18, (commonly known as "The Celler-Kefauver Anti-Merger Act").

[fol. 7073] The proposed merger sought to be enjoined was approved by the Directors of the banks involved on November 15, 1960, and by the Comptroller of the Currency on February 24, 1961. This action was instituted on February 25, 1961.

Generally, the complaint alleges that commercial banking and several of its integral parts comprise interstate commerce; that commercial banking with its integral parts fills an essential and unique role in the nation's economy with a combination of services unduplicated by other financial institutions; that existing and potential competition in commercial banking in the Philadelphia area would be substantially and unreasonably lessened; that the merger would substantially and unreasonably increase concentration in banking in the Philadelphia area and that existing and potential competition in the commerce and industry served by commercial banks in the Philadelphia area would be substantially and unreasonably lessened. Parenthetically it may be noted at the outset that the last of these averments has not been seriously presented by the plaintiff and, for all practical purposes, has been abandoned.

The net effect of the above, the plaintiff contends, is a violation of both Section 1 of the Sherman Act and Section 7 of the Clayton Act. The plaintiff contends further that competition in commercial banking is absolutely vital and necessary to the preservation of the financial structure [fol. 7074] and security of the nation; that undue concentration of banking powers would have the effect of increasing costs and interest rates both to depositors and bor-

rowers; would result in a decrease in the credit facilities available to the general public and, in effect, would destroy the very foundation of the banking system of the United States which, according to the Government's witnesses, rests entirely upon a number of independently-owned banks serving the community, which system they felt strengthened competition, and a merger such as this would tend to destroy it.

Initially, it would help to review, in extremely brief outline, what Congress has done in this field. The Sherman Act, supra, enacted in 1890, was designed to prevent combinations in restraint of trade or commerce among the several states or with foreign nations. That this was an exposition of the common law doctrine is revealed by the decision in *United States* v. *American Tobacco Company*, 221 U. S. 106 (1911) at pages 179-180 where the Supreme Court of the United States declared:

> "Applying the rule of reason to the construction of the statute, it was held in the Standard Oil Case that, as the words 'restraint of trade' at common law and in the law of this country at the time of the adoption of the anti-trust act only embraced acts or contracts or agreements or combinations which operated to the prejudice of the public interests by unduly restricting competition, or unduly obstructing the due course of trade, or which, either because of their inherent nature or effect, or because of the evident purpose of the acts, etc., injuriously restrained trade, that the words as used in the statute were designed to have [fol. 7075] and did have but a like significance . . . the words 'restraint of trade' should be given a meaning which would not destroy the individual right to contract, and render difficult, if not impossible, any movement of trade in the channels of interstate commerce,—the free movement of which it was the purpose of the statute to protect."

Citing Standard Oil Co. v. U.S. 221 U. S. 1 (1911).

It will therefore be seen that the Supreme Court judged the key factor and purpose of the Sherman Antitrust law to be the perpetuation of and protection of free competition. An examination of both the Clayton Act and the

Federal Trade Commission Act, both passed in the year 1914, and the case law decided thereunder, again stresses the principle of law that competition should be encouraged as a national policy, and it is the destruction of this free competition which is proscribed.

The Miller-Tydings Amendment to the Clayton Act and the Robinson-Patman Amendment were both designed to insure free and fair competition. The Celler-Kefauver Amendment of 1950 was designed to prevent asset acquisitions thereby plugging a loophole in the Clayton Act which previously prevented stock acquisition only, and did not cover the area in which asset acquisitions might tend to destroy competition. The legislative history of this latter Act clearly indicates the intent of the Congress to preserve competition as defined by the Supreme Court.

Since competition and the preservation of competition [fol. 7076] permeates each of the aforementioned Acts and is the common bond between each of them, it would appear that 71 years after the passage of the first Antitrust law, the Court should have (but does not) a clear legal definition of competition as used in each of the Acts. Congress has given the Court at least one idea of what it means in the use of the word when it refers to "vigorous" competition. What then is the real definition of competition and what are the standards of competition required by these Acts? The Webster definition reads as follows:

> "Com. & Econ. The effort of two or more parties, acting independently, to secure the custom of a third party by the offer of the most favorable terms; also, the relations between different buyers or different sellers which result from this effort."

In *United States* v. *Aluminum Company of America*, 91 Fed. Supp. 333, at 355 (S.D. N.Y. 1950), Chief Judge Knox defined competition as follows:

> "Commercial competition, theoretically, is the independent endeavor of two or more persons or organizations within the realm of a chosen market place, to obtain the business patronage of others by means of various appeals, including the offer of more attractive terms or superior merchandise."

It seems to the Court that the Congress, by the use of the word "competition", intended to preserve free and open markets wherein the rivalry of the commercial firms, in the same line of endeavor, for the patronage of the common customer, would be demonstrated by a business at- [fol. 7077] mosphere where free purchasers and free sellers, under no obligation to buy, and under no obligation to sell, would enter into contracts of purchase and sales (or service contracts) because of the actual inducements offered, such as quality of product, terms, delivery, and the many other factors which make for good business relations, having in mind the peculiar situations, facts and circumstances which govern the particular transactions between individuals or organizations.

It is also apparent that in any antitrust action, including the instant one, a Judge called upon to decide the case must, of necessity, take the facts that are presented to him and determine on those peculiar facts whether the particular circumstances involved will, or will not, destroy the free competition which the Congress intended to preserve, and with particular scrutiny of the industry or part thereof charged with violations.

The Government here has brought an action—the first of its kind—to prevent the merger of two strong Philadelphia banks, and on the ground that this merger will (1) violate the Sherman Act by restraining trade, and (2) violate the Clayton Act by lessening and or destroying competition and tending toward a monopoly. The Court believes that the Government's general theory of the case should be set out in brief, broad outline before coming to the specifics.

The Government's case was predicated upon the premise [fol. 7078] that the banks involved were legally restricted to having offices in geographic limits. Starting with that assumption, the Government introduced a wealth of statistical data, the accuracy of which has not been questioned, which would show that a very large percentage of the deposits and loans originated in the restricted geographical area. Based strictly upon this premise, and applying the principles heretofore enunciated in industrial cases, the Government argues that these percentages are all persuasive, show a high degree of concentration of

the market involved, and that it is therefore the duty of the Court to prevent this clear, apparent restraint of trade, destruction of, or restriction of competition, and tendency to monopoly by prohibiting the merger.

The Court accepts the statistics introduced as showing exactly what they demonstrate on the figures used, but, as will be pointed out later when discussing the specifics, refuses to accept the conclusions which the Government asks the Court to draw.

In support of its contention that this merger is illegal, the Government attempted to show by the testimony of two university professors that the merger would have a profound adverse effect upon the banking system of this area, actually restrict credit, and permit price fixing for banking services. This attempt was far from successful. [fol. 7079] The professors had individual theories of the effect of the merger on the monetary system of the United States and of this area, which were completely destroyed on cross-examination, particularly as relating to the Philadelphia situation. The Government also attempted to establish, by opinion testimony of small town bankers, that the contemplated merger would adversely affect not only the banking situation in Philadelphia, but generally throughout the country, including their own small towns. Their testimony was practically a rehash of the testimony they gave before both the House and Senate Committees considering the Bank Merger Act of 1960. There they strongly urged the Congress of the United States to forbid further bank mergers and to maintain the status quo of the banking system of the United States. They attempted to have Congress limit prospective mergers to the very narrow situations where economic necessity would make a merger absolutely imperative. For example, they conceded that where a bank was on the verge of insolvency, a merger should be permitted with a strong solvent bank for the protection of depositors and the general public. They also agreed that where ineffectual management was demonstrated, again it would be in the public interest to merge the bank with a strong progressive bank, again for protection of depositors and the public. With these two and other minor exceptions, not necessary to outline [fol. 7080] here, they fought vigorously to have the Con-

gress absolutely forbid all other mergers. This the Congress refused to do, and, in the opinion of this Court, properly so.

Commercial banking, despite the attempt of the Government in this case to have the Court consider it an ordinary line of commercial endeavor, comparable to the ordinary industrial organizations, is a specialized branch of what the Court chooses to term the financial industry. It is completely regulated. It may not, as an industrial plant might, establish a branch of operations where it pleases. By virtue of both state and federal authority, it must keep its assets liquid, as will be hereinafter discussed. It may charge for its principal services (lending of money) a maximum prescribed by law. It may not pay interest on demand deposits and is limited by law to the amounts which it may pay for savings or time deposits. It may not go out and buy raw materials and manufacture products and attempt to extend its market. Its stock in trade is money and the only way that it can generate its stock in trade—money—is to create demand deposits which it may lend to individuals, corporations or organizations. It is the commercial bank, even though strictly regulated, which comprises the backbone of the monetary system of the United States. To place it in and consider it as part of the commercial and industrial field, as contrasted with the financial, would be to ignore the realities of the situation.

[fol. 7081] Both the Government and the defendants have, in support of their respective contentions, cited the only antitrust case law available and all such cases were decided under the Sherman and subsequent Acts. All involve only commercial and industrial organizations. While the Court recognizes the validity of the broad principles of law therein enunciated, it certainly does not follow that those principles should be applied with the same force and effect to a regulated industry as to one in the so-called "free enterprise" field. The Congress of the United States has, in fact, in the industrial and commercial field, usually exempted regulated industries from the application of the antitrust law and in the public interest.

It is significant to note that in the Bank Merger Act, the Congress of the United States has included as one

of the controlling elements, and an important one, for consideration in the determination of Governmental approval of bank mergers, that same public interest. This Court does not believe, as the Government would have it, that this was a mere passing reference without practical significance and actually completely irrelevant to a decision of this case, but, on the contrary, feels that the inclusion of this public interest concept is an important element in the Congressional approach to monetary regulation.

The only question involved in this case is—Will this proposed merger of two Philadelphia banks, in the City [fol. 7082] and County of Philadelphia, Commonwealth of Pennsylvania, substantially lessen competition, tend toward monopoly, and/or restrain trade and commerce, in violation of the Clayton and Sherman Acts?

Coming now to the specifics of this case and expanding upon the allegations of the complaint, it avers, inter alia, that commercial banks fill an essential and unique role in the nation's economy with a combination of services unduplicated by other financial institutions; that commercial banking in Philadelphia and the surrounding metropolitan area is heavily concentrated in a few banks; that PNB and Girard compete with each other, and with other banks in the Philadelphia area, in the performance of commercial banking functions; that as of June 30, 1960, PNB accounted for approximately 22% and Girard for approximately 15% of the total deposits in Philadelphia commercial banks; and, that as a result of the proposed merger PNB would become the largest commercial bank in the Philadelphia area and would be approximately 50% larger than its closest competitor.

Further, it is charged that defendants have been engaged in an unlawful combination in unreasonable restraint of trade and commerce in commercial banking in violation of Section 1 of the Sherman Act, and that the effect of the merger may be substantially to lessen competition, or tend to create a monopoly in violation of Section 7 of the Clayton Act.

PNB is a banking association, engaged in interstate [fol. 7083] commerce, organized under the laws of the United States, having its principal place of business at

Philadelphia, Pennsylvania. Girard is a banking association, engaged in interstate commerce, organized under the laws of the Commonwealth of Pennsylvania, having its principal place of business at Philadelphia, Pennsylvania.

On November 15, 1960 the Boards of Directors of PNB and Girard approved a proposed merger of the two banks. On the same day, an application for approval of the merger was filed with the Comptroller of the Currency in accordance with the provisions of the 1960 amendment to the Federal Deposit Insurance Corporation Act, 12 U.S.C. Section 1828(c), commonly known as the Bank Merger Act.

On December 20, 1960, the two Boards approved a written agreement of consolidation to be effected in accordance with the provisions of the national banking statutes, 12 U.S.C. Section 215. On February 24, 1961 the Comptroller of the Currency approved the proposed merger. He did so despite the fact that in the reports submitted to the Comptroller by the Federal Reserve Board, the Federal Deposit Insurance Corporation and the Attorney General, as was required by the Bank Merger Act, both the Attorney General and the Federal Reserve Board concluded that the merger would result in a substantial lessening of competition and a tendency toward monopoly, and the Federal [fol. 7084] Deposit Insurance Corporation concluded that the merger would be adverse as to Philadelphia and the immediate suburbs, but not adverse in the regional, national, and international fields of competition.

The next day the Department of Justice filed the complaint in this action. On May 9, 1961, meetings of the shareholders of the two banks were held and the agreement of consolidation was approved. The trial of this case began on June 5, 1961, without a jury, and was concluded on August 3, 1961.

PNB was chartered on October 20, 1864 under an Act of Congress of June 3, 1864. In 1926 it merged with Girard National Bank, and in 1928 it merged with Franklin-Fourth Street National Bank. Until 1951 PNB engaged in what has been termed a "wholesale" banking business, at which time it was decided to enter the "retail" banking and trust fields. Since 1951 PNB has acquired

9 additional banks. As of March 10, 1961, PNB conducted a general commercial banking business through 27 offices, 10 of which are located in Philadelphia County, 5 in Delaware County, 5 in Bucks County, and 7 in Montgomery County. As of June 30, 1960, PNB had total assets of $1,064,335,000, total deposits of $924,495,000, and total loans of $523,612,316 of which approximately 57% in dollar amount were in commercial and industrial loans.

Girard was chartered as a state bank on March 17, 1836 by the Pennsylvania legislature. It was primarily engaged [fol. 7085] in the trust business and accompanying banking services until 1940 at which time efforts were begun to develop commercial business and consumer credit loans. Until 1950 Girard had only one office. In the past 10 years it has engaged in 6 mergers. Girard now conducts a general commercial banking business through 39 offices, of which 21 are located in Philadelphia, 12 in Delaware County, and 6 in Montgomery County. As of June 30, 1960 Girard had total net assets of $740,920,000, total net deposits of $650,790,000 and total net loans of $399,362,000, of which approximately 49% in dollar amount were in the commercial and industrial category.

With this brief introduction it now becomes necessary, before discussing in detail the factual questions presented and the law applicable thereto, to decide two purely legal questions which have been raised, one relating to the Bank Merger Act, the other to the applicability of the Clayton Act to this action.

Bank Merger Act of 1960

The defendants contend that the approval of the merger by the Comptroller of the Currency is the final and exclusive determination of its legality and that the Bank Merger Act of 1960 precludes a review of the proposed merger under the antitrust laws. 12 U.S.C. Section 1828(c) reads in relevant part:

[fol. 7086] "No insured bank shall merge or consolidate with any other insured bank or, either directly or indirectly, acquire the assets of, or assume liability to pay any deposits made in, any other insured bank without the prior written consent (i) of the Comp-

troller of the Currency if the acquiring, assuming, or resulting bank is to be a national bank or a District bank, . . . In granting or withholding consent under this subsection, the Comptroller, . . . shall consider the financial history and condition of each of the banks involved, the adequacy of its capital structure, its future earnings prospects, the general character of its management, the convenience and needs of the community to be served, and whether or not its corporate powers are consistent with the purposes of this chapter. In the case of a merger, consolidation, acquisition of assets, or assumption of liabilities, the appropriate agency shall also take into consideration the effect of the transaction on competition (including any tendency toward monopoly), and shall not approve the transaction unless, after considering all of such factors, it finds the transaction to be in the public interest."

Defendants claim that the above statute makes it clear that it was the intent of Congress that the Comptroller test the validity of bank mergers by a *public interest* standard which is broader than and essentially different from an exclusively antitrust standard. Since Congress decided to apply antitrust policies to such mergers only to the limited and subordinate extent of being a single factor for consideration, it is argued, it must follow that the practical implementation of this congressional decision necessarily precludes an antitrust action to prevent a merger which has been approved by the executive agency charged with applying the public interest standard in determining whether approval should be given.

[fol. 7087] In support of this argument, it is submitted that the legislative history of the Bank Merger Act (hereinafter referred to as the "Act"), emphasizes the fact that the competitive factors are not to be controlling in the public interest determination to be made by the Comptroller. For example, at page 24 of the *Senate Report, Senate Report No. 196*, 86th Cong., 1st Sess. on S. 1062 (1959), the following statement appears:

"Under S. 1062 the competitive factors involved in the merger are only one element of several to be con-

> sidered in passing on the application. The committee wants to make crystal clear its intention that the various banking factors in any particular case may be held to outweigh the competitive factors, and that the competitive factors, however favorable or unfavorable, are not, in and of themselves, controlling on the decision."

And, in the House Report at pages 9 and 10, *House Report No. 1416,* 86th Cong. 2d Sess., (1960), this statement appears:

> "Because banking is a licensed and strictly supervised industry that offers problems acutely different from other types of business, the bill vests the ultimate authority to pass on mergers in the Federal bank supervisory agencies, which have a thorough knowledge of the banks, their personnel, and their types of business."

It is true that one can find statements in the legislative history of the Act which, when read alone, indicate that Congress intended to preclude the application of the anti trust laws to bank mergers. It is most difficult, however, to accept defendants' contention when faced with unequivocal statements to the contrary in the reports of both the [fol. 7088] Senate and the House. This statement appears at page 9 of the House Report:

> "S. 1062 would not in any way effect the applicability of the Sherman Act or the Clayton Act to bank mergers."

And, at page 3 of the Senate Report:

> "S. 1062 would not affect in any way the applicability of the Sherman Act to bank mergers and consolidations."

These statements cannot possibly be reconciled with defendants' interpretation of the legislative intent of Congress.

In support of their position, the defendants place a great deal of weight on the *public interest,* as opposed to the antitrust, standard written into the Act. Why, they

ask, would Congress arm the Comptroller with such a comprehensive standard if it intended that the Department of Justice could supersede his determination by a mere showing of anticompetitive effects? This argument of the defendants, while persuasive, does not convince the Court that it should enunciate the rule of law requested that public interest is the controlling factor in any particular merger. There is no doubt that the public interest factor, while not controlling, does, in this type of antitrust litigation, play more than a casual or secondary role, particularly where it involves a highly regulated field. The Court cannot conclude that merely because a public interest standard was written in the statute as one of the factors to be [fol. 7089] considered, that a Court is rendered incompetent to review the action of the individual or department charged with the administration of the Act. Had Congress so intended, it certainly would have been specifically set out and in plain terms in the language of the statute. The Court does not find that intendment here.

Defendants also press the argument on another ground as well. They say that Congress intended to exclude the antitrust laws because the Act contains no provision such as is found in Section 11 of the Bank Holding Company Act of 1956, 12 U.S.C. Section 1841 et seq., which explicitly preserves the application of the antitrust laws to the subject matter of the statute. It is pointed out that Congressman Celler proposed specific language for such an amendment in the House hearings on the bill, but nevertheless it was not included in the amendment by the House or Senate 1062 as previously passed by the Senate. The following statement, however, clearly indicates that Congressman Celler did not consider that the antitrust laws would be excluded by the failure to insert such a provision:

> "While such a provision would not add to the bill from a substantive standpoint, it would avoid needless controversy and possible litigation involving the contention that the strictures of the Sherman and Clayton Acts had been nullified by the provisions of the pending bill." Hearings before the Subcommittee No. 2 [fol. 7090] of the Committee on Banking and Currency, H.R., 86th Cong., 2d Sess. on S. 1062 (1960), pages 131 and 132.

Moreover, the Court finds the antithetical argument proffered by the plaintiff equally, if not more persuasive, than that of the defendants. The Government argues that a creation of an exemption from the antitrust laws requires clear and explicit language in the exempting statute such as is found in Section 5(11) of the Interstate Commerce Act, 49 U.S.C. Section 5(11)

In light of this difference of opinion, the Court is constrained to return to the statements made in both the Senate and House reports concerning the applicability of the Clayton and Sherman Acts. It is the opinion of this Court that defendants have failed in their attempt to nullify the plain meaning of these words. They are much too explicit to be ignored or explained away.

Applicability of Section 7 of Clayton Act

The Celler-Kefauver Anti-Merger Act, 15 U.S.C. Section 18, reads in relevant part:

> "No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly."

[fol. 7091] The Celler-Kefauver amendment was enacted in 1950 as the original Section 7 proved ineffective in preventing mergers, primarily because of the failure of the statute to include asset as well as stock acquisitions. Because banks are exempted from the jurisdiction of the Federal Trade Commission, under the provisions of the Federal Trade Commission Act, 15 U.S.C. Section 45(a), the Celler-Kefauver amendment can only apply if the bank merger is consummated through a stock acquisition. Therefore, if the Clayton Act is to apply at all to the merger presently under consideration, the plaintiff must

show that the proposed consolidation of the defendants involves a stock acquisition.

Before considering the argument advanced by the plaintiff with respect to this question, it is necessary, so that the transaction can be placed in the proper perspective, to set forth certain pertinent provisions of the agreement of consolidation entered into by the defendant banks:

Section 1

"Girard and Philadelphia National (the 'Consolidating Banks') shall be consolidated pursuant to the provisions of the aforesaid statute,[1] under the charter of the Philadelphia National Bank, which shall continue after the effective date of the consolidation as defined below."

[fol. 7092] Section 5

"The corporate existence of Girard shall be merged into and continued in Philadelphia National, which shall continue in existence as the Association, and the Association shall be deemed to be the same corporation as each of the Consolidating Banks. All rights, franchises, and interests of each bank in, and to every type of property and choses in action, including those held by it as fiduciary, as they exist at the Effective Date shall be vested in the Association without any conveyance or transfer; and the Association shall be responsible for all of the liabilities of every kind and description, including liabilities arising out of the operation of the Trust Department, of each bank existing as of the Effective Date."

"Girard shall contribute to the Association acceptable assets having a book value, over and above its liability to its creditors, of at least $74,059,392 . . ."

"At the Effective Date Philadelphia National shall have on hand acceptable assets having a book value, over and above its liability to its creditors, of at least $93,306,684 . . ."

---

[1] 12 U.S.C. Section 215.

Section 6

"Upon the statutory consolidation becoming effective: . . . (i) each holder of an outstanding certificate representing shares of Philadelphia National stock shall retain his certificate, which shall automatically remain a certificate representing shares of stock in the Association, . . . and (ii) each holder of an outstanding certificate representing shares of Girard stock shall surrender the same to the Association promptly after the Effective Date and receive in exchange therefor certificates representing the full number of whole shares of stock in the Association to which such shares of stock in Girard shall have been converted, . . ."

The plaintiff contends that under the provisions of Section 6 of the agreement, PNB shall acquire shares of Gir- [fol. 7093] ard stock which shall be converted into shares of stock in the Association. It is argued that as a result of the merger, the Girard shareholders would give up certain rights (e.g., the right to have a voice in its management, the right to share in its profits, and the right to receive and divide its total capital less debt upon liquidation) to PNB and receive in exchange an equitable ownership in the very different property of PNB. From this it is concluded that the merger would be accomplished by a stock acquisition on the part of PNB in violation of the Celler-Kefauver amendment to Section 7 of the Clayton Act. The Court cannot agree with the plaintiff's conclusion that the transaction here involved is a stock acquisition falling within the scope of the statute.

Plaintiff has misinterpreted the terms of the agreement. Under the provisions of Section 5, the corporate existence of Girard is being merged with that of PNB to form an Association, each bank contributing all its assets. It is true that the Association being created will continue under the national bank charter already held by PNB. However, this in no way alters the fact that the corporate character of PNB, as it is today, will cease to exist. PNB might be designated the "surviving bank" but it nevertheless survives as a vastly different entity. PNB is acquiring nothing. Rather, the two banks are creating a national banking association by the consolidation of their assets. Sec-

[fol. 7094] tion 6 merely outlines the procedures to be followed with respect to the shareholder's evidence of ownership in the Association once the consolidation becomes a reality. The Association itself is exchanging the certificates representing shares of Girard stock for certificates representing shares of stock in the Association. The entire transaction is patterned in conformity with the applicable federal statute relating to bank consolidations and mergers of assets. The fact that certificates representing shares of stock are exchanged for new ones is merely incidental to the transaction, and in no way affects or alters its character.

As defendants point up in their brief, the proposed merger differs from a stock acquisition in several ways under the provisions of the applicable federal statute. 12 U.S.C. Section 215, which must be adhered to in carrying out the consolidation, provides that it may be effected upon the affirmative vote of at least two-thirds of the capital stock outstanding. In a stock acquisition, there would be no power in Girard, or any group of shareholders, to compel any shareholder to sell his stock. Subsections (b), (c) and (d) of Section 215 provide for the right of a dissenting shareholder to receive the appraised value of his shares in cash; he would not have any comparable right in an acquisition of stock. Subsection (e) of the same statute provides that all of the assets of the indi-
[fol. 7095] vidual banks "shall be transferred to and vested in the consolidated national banking association by virtue of such consolidation without any deed or other transfer," which again differs from the procedure with respect to an acquisition of stock.

Moreover, the House Committee on Banking and Currency, when reporting on the Bank Merger Act of 1960, recognized the very problem with which we are confronted here:

> "Section 7 of the Clayton Act prohibits acquisitions of bank stock 'where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.' Because Section 7 is limited, insofar as banks are concerned, to cases where a merger is accomplished through acquisition of stock,

and because bank mergers are accomplished by asset acquisitions rather than stock acquisitions, the act offers 'little help' in the words of Hon. Robert A. Bicks, acting head of the Antitrust Division, in controlling bank mergers." House Report No. 1446, 86th Cong., 2d Sess., (1960), p. 9.

This Court is of the opinion that the Celler-Kefauver Anti-Merger Act of 1950 does not apply to a bank merger of this nature. Any extension of the statute is a function peculiar to the Congress of the United States.

However, it should be noted here that because it is essential to the parties that a final determination of this matter be reached in as short a period of time as is possible, this Court will proceed on the assumption that the Clayton [fol. 7096] Act is applicable in all respects.

Commercial Banking

Before discussing the questions involved with respect to the Clayton and Sherman Acts, it is necessary to point up the principal characteristics and functions of a commercial bank.

A "commercial bank," as distinguished from other bank and non-bank financial institutions, is an institution authorized to receive both demand and time deposits, to make loans of various types, to engage in trust services and other fiduciary functions, to issue letters of credit, to accept and pay drafts, to rent safety deposit boxes, and to engage in many similar activities. Commercial banks are the only institutions authorized to receive demand deposits. "Demand deposits" are funds accepted by a bank which are subject to immediate withdrawal. They represent the largest element in the money supply of the United States. No interest is paid on demand deposits, as is the case with time and savings deposits.

Commercial banks offer a wider variety of services than any other financial institution. They have been termed the "department stores of finance." Some of their major functions include the receiving of demand deposits, the lending of funds to individuals, partnerships and corpora- [fol. 7097] tions, the receiving and administering of time

and savings deposits; and the performance of personal trust services.

Because commercial banks are the principal reservoir of other people's money, they are regulated to a relatively high degree. Aside from state banking authorities, they may be subject to the jurisdiction of the Federal Reserve Board, the Federal Deposit Insurance Corporation and the Comptroller of the Currency. This governmental regulation necessarily limits to an extreme degree the scope and character of competition among commercial banks.

Demand deposits held by commercial banks account for approximately 80% of the money supply of the United States. For the commercial banking system as a whole, two-thirds of total deposits are demand in nature. In June of 1960, more than 83% of the total deposits of PNB and Girard combined were in the form of demand deposits.

In addition to demand deposits, the area of commercial and industrial loans is one in which great emphasis is placed. Because of this concentration in demand deposits on the part of commercial banks, these commercial and industrial loans are necessarily short term in nature. As has been pointed out previously, PNB, as of June 30, 1960, had approximately 57% in dollar amount of its total loans in the commercial and industrial area, and Girard had ap- [fol. 7098] proximately 49% in dollar amount of its loans in this same category.

Small and medium size borrowers rely to a great extent on commercial banks to meet their financial needs. In fact, a substantial proportion of loans made in the United States are made to smaller size businesses. In 1955, for example, out of a total of 1,103,000 loans made by member banks of the Federal Reserve, 918,000 were made to businesses with total assets under $250,000. It was testified at the trial of this case that a Philadelphia businessman would find it very difficult to procure an unsecured, short-term loan from any source other than a commercial bank.

Commercial banks are restricted in the nature, amount, volume and purpose of loans they are permitted to make. All national banks and banks chartered in Pennsylvania and most other states are, in general, not permitted to have outstanding loans to any one customer in an amount in excess of 10% of their capital and surplus. This is

what is known as the "lending limit." In addition, those commercial banks which are members of the Federal Reserve must maintain on deposit with the Federal Reserve Bank, or in currency in their own bank, reserves equal to 16.5% of their total demand deposits, if they are located in certain areas (including Philadelphia), and 12% if they are so-called country banks. The principal factors in competition among commercial banks are convenience, quality [fol. 7099] of service, personal relationships, and the capacity to meet the requirements of the customer. The foregoing remarks are not intended to present a comprehensive analysis of commercial banking but all bear on the problem of whether or not the proposed merger violates the statutes.

The initial problem in litigation of this nature, in either a Sherman Act or Clayton Act case, involves a determination of the relevant market within which the defendants compete. *United States* v. *duPont & Co.*, 353 U. S. 586 (1957); *United States* v. *Columbia Steel Co.*, 334 U. S. 495 (1948). To find this area of effective competition, the plaintiff must establish a product market (line of commerce) and a geographic market (section of the country).

The Product Market

The plaintiff contends that the appropriate lines of commerce in which to gauge the effects of this proposed merger under Section 7 of the Clayton Act are the following: Commercial banking, commercial and industrial loans, installment lending to individuals, single payment loans to individuals, real estate loans, personal trusts, time deposits of partnerships and corporations, time and savings deposits, demand deposits, and IPC (Individual, Partnership and Corporation) demand deposits.

[fol. 7100] At the outset, the Court is confronted with the problem of deciding which test to apply in determining the appropriate line or lines of commerce. The plaintiff contends that the relevant legal standard for delineating the lines of commerce in which a merger may substantially lessen competition or tend to create a monopoly is whether the products (services) "have sufficient peculiar characteristics and uses to constitute them products sufficiently distinct from all others . . ." This was the test applied in

United States v. *E. I. duPont deNemours*, 353 U. S. 586, pp. 593-4 (1957). The plaintiff argues that the record in this case shows that the general services, as well as certain specialized services, of commercial banks are either not supplied at all or at best supplied only peripherally and imperfectly by other sources.

The defendants suggest another test. They claim that the proper legal standard to be applied in defining the product market is to determine whether the products are "reasonably interchangeable for the purposes for which (they) are produced—price, use and qualities considered." The Supreme Court utilized this test in the so-called *Cellophane* case. *United States* v. *E. I. duPont deNemours*, 351 U. S. 377, 404 (1956). Defendants contend that commercial banking in its entirety is not a product line. Rather, they submit it is a business which has two major [fol. 7101] subdivisions—the acceptance of deposits in which the bank is the debtor, and the making of loans in which the bank is the creditor. Both of these major divisions are further divided by distinct types of deposits and loans. As to many of these functions, there are different types of customers, different market areas, and, most importantly, different types of competitors and competition. With the possible exception of demand deposits, there is an identical or effective substitute for each one of the services which a commercial bank offers. From this the Court is to conclude that because the services offered by other financial institutions are reasonably interchangeable with those offered by commercial banks, the separate lines of commerce suggested by the plaintiff cannot be limited merely to commercial banks, but must include in each and every case the services of other financial institutions as well.

Despite the fact that the rule suggested by the plaintiff was enunciated in litigation involving the Clayton Act, while the other was formulated in a Sherman Act case, and recognizing that the parties here imply that the standards are not consistent, it is nevertheless the opinion of this Court that they are nothing more than expressions of the same rule in different language. As judge Herlands stated in *United States* v. *Columbia Pictures Corp.*, 189 [fol. 7102] F. Supp. 153, pp. 183-4 (S.D.N.Y. 1960).

"To determine whether or not there is a reasonable probability of a substantial lessening of competition, Section 7 of the Clayton Act demands an examination into economic realities. All competition must be considered, including competition faced by the product in question from other products.

"The tests enunciated by the authorities are consistent. Effectively, the test 'reasonable interchangeability for the purposes for which (the products) are produced—price, use and qualities considered', and the test 'sufficient peculiar characteristics and uses to constitute them products sufficiently distinct . . . to make them a line of commerce within the meaning of the Clayton Act' are but different verbalizations of the same criterion.

"They require the same accumulation and scrutiny of facts and application of judgment. The task is to find the area of effective competition. The 'characteristics and uses' formulation does not limit the court's inquiry to physical attributes and foreclose inquiry into the competitive situation."

For example, applying this reasoning to the instant case, if a commercial bank has sufficient peculiar characteristics and uses to constitute it sufficiently distinct from all other financial institutions, then a commercial bank cannot reasonably be interchanged with other financial institutions by the individual or business firm. Conversely, if a commercial bank can reasonably be interchanged, then its characteristics and uses must not have those sufficient peculiar characteristics and uses necessary to constitute it sufficiently distinct from other financial institutions.

In attempting to justify its choice of "lines," the plain- [fol. 7103] tiff has endeavored to describe the uniqueness of each one. The defendants have challenged this approach by showing that many other institutions offer very similar services. Thus, plaintiff asserts that only a commercial bank makes unsecured, short-term commercial and industrial loans, while the defendants argue that insurance companies, factors and finance companies make commercial and industrial loans.

Defendants attack the suggested line "installment loans to individuals" on the ground that mutual savings banks, savings and loan associations, credit unions, finance companies, as well as other institutions, all engage in installment lending. Therefore, they argue, it is impossible to gauge the effect that the merger would have without knowing not only the percentage figures for PNB and Girard but also the percentage figures for all these other institutions. This reasoning is used in denouncing almost all of the suggested lines.

It is argued that insurance companies are in direct competition with commercial banks in the making of single payment loans to individuals. And, PNB and Girard contend that several other institutions make real estate loans; that individuals are in direct competition with commercial banks in the personal trust field; that time deposits of partnerships and corporations face competition from many [fol. 7104] alternatives, including United States Government obligations, commercial paper, tax-free securities, and banker's acceptances; that savings deposits are not an appropriate line because many other institutions receive savings funds.

Finally, plaintiff claims that demand deposits and IPC demand deposits are a separate product line because only commercial banks are authorized to receive them.

It seems quite apparent that both plaintiff's and defendants' positions have some merit. However, it is not the intention of this Court to subdivide a commercial bank into certain selected services and functions. An approach such as this, carried to the logical extreme, would result in many additional so-called lines of commerce. It is the conglomeration of all the various services and functions that sets the commercial bank off from other financial institutions. Each item is an integral part of the whole, almost every one of which is dependent upon and would not exist but for the other. The Court can perceive no useful purpose here in going any further than designating commercial banking a separate and distinct line of commerce within the meaning of the statute. It is undoubtedly true that some services of a commercial bank overlap, to some degree, with those of certain other institutions. Nevertheless, the Court feels quite confident in

holding that commercial banking, viewed collectively, has [fol. 7105] sufficient peculiar characteristics which negate reasonable interchangeability.

Section of the Country

The plaintiff contends that the relevant geographic area for each line of commerce in which to gauge the impact of the proposed merger on competition is the four-county area (Philadelphia, Montgomery, Bucks and Delaware Counties). Under Pennsylvania banking laws, commercial banks may open offices in the political community where their main office is situated, in some other political community within their home county, or in any county contiguous to the county in which the main office is located. At the present time, PNB has offices in Philadelphia and the three contiguous counties of Bucks, Montgomery and Delaware. Girard has offices in Philadelphia, Montgomery and Delaware counties. Plaintiff submits that the phrase "section of the country" in Section 7 must be determined with respect to buyers and sellers. Recognizing that it is as unlikely that any given group of sellers would have all their sales within any specific area, as it is that potential customers in such an area would buy from them to the exclusion of all others, plaintiff argues that the antitrust laws are satisfied if buyers and sellers in a distinguishable area are significantly limited to that area.

[fol. 7106] The defendants suggest that the plaintiff has proposed the four-county area in order to inflate the percentage figures. They contend that a relevant geographic market for banking services must take into consideration not only the location of the bank and the location of its customers, but also the different types of customers and the location of alternative choices available to them.

Plaintiff has presented a multitude of statistical information showing the source of the defendants' business, which the Court will not reiterate here. A few examples should be sufficient. As of September, 1960, combining the figures for the two banks, commercial and industrial loans outstanding in the four-county area amounted to 57% of the total dollar amount; loans to individuals in the four-county area amounted to 72% of the total dollar amount; lines of credit outstanding amounted to 49% of

the total dollar amount; personal trusts originating within the four-county area amounted to 83.1% of the total; and, demand deposits originating within the four-county area amounted to 75.4% of the total dollar amount.

Notwithstanding the fact that some of these percentage figures, at first blush, appear to be substantial, it is the opinion of the Court that the plaintiff has failed to establish that the four-county area is the appropriate section of the country in which to test the legality of the [fol. 7107] merger.

Commercial bank markets are extremely complex. It is difficult to pin point a specific locale as the relevant geographic market. PNB and Girard compete in the international, national, regional, as well as the local, markets depending upon the particular service and the customer involved.

In addition, the relevant geographic market is a bilateral concept. Not only must the Court consider the origin of the bank's business, but equally as important are the alternatives available to the customer. Borrowers are not limited by political boundaries, although the smaller ones are limited in range. The alternatives available necessarily depend on the size and financial condition of the customer.

The larger customers definitely have alternatives ranging from regional to national. It was very surprising to learn at the trial of this case that not only New York banks solicit and receive substantial business from customers within the four-county area, but also large banks from all the larger cities in the nation do likewise. Further, the Court is satisfied that PNB and Girard derive a substantial amount of business from without the four-county area.

What then is the "section of the country"? At the very least, it must include the entire Delaware Valley (i.e. Philadelphia, Bucks, Montgomery, Delaware, Chester, Cam- [fol. 7108] den, Burlington and Gloucester counties, the last three being in New Jersey), or the ten-county area referred to by the defendants and definitely New York City. However, it probably would be more accurate to state that the relevant geographic market in which PNB and Girard compete includes the greater part of the northeastern United States.

Unfortunately, the Court does not have comparative figures on the relative size of the defendant banks' business in these areas as contrasted with local banks. Plaintiff has confined its proof almost solely to the four-county area. For this reason, the Court could terminate its discussion of the Clayton Act at this point. The legality of a merger cannot be tested without a relevant market. However, the Court will assume, although it holds otherwise, for the remainder of the opinion that the plaintiff has proved that the four-county area is the "section of the country."

The Clayton Act

With this arguendo assumption (i.e. that plaintiff has established the four-county area as the relevant geographic market), the issue arising under the Clayton Act can now be stated: Whether the proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in commercial banking in the four-county area, in violation of Section 7 of the Clayton Act. [fol. 7109] The plaintiff contends that the proposed merger is in violation of Section 7 because of the following reasons: (1) the undeviating trend toward banking concentration in the four-county area; (2) the direct, substantial competition which will be eliminated; (3) the unlikelihood of substantial new entrants into the business; and (4) the much larger resources the merged bank would have.

Plaintiff places considerable weight on the second reason above listed. Cited is the often quoted section of the House Report which reads in relevant part:

> "The bill is intended to permit intervention in such a cumulative process when the effect of an acquisition may be a significant reduction in the vigor of competition, even though this effect may not be so far-reaching as to amount to a combination in restraint of trade, create a monopoly, or constitute an attempt to monopolize. Such an effect may arise in various ways, such as elimination in whole or in material part of the competitive activity of an enterprise which has been a substantial factor in competition, . . ." H. R. Rep. No. 1191, 81st Cong. 1st Sess. (1949), p. 8.

It is the plaintiff's position that the elimination of Girard, which defendants readily admit is in direct competition with PNB, will substantially suppress and lessen competition with the consequent tendency to monopoly.

Defendants, on the other hand, submit that the legislative history of the 1950 amendment to Section 7 of the Clayton Act discloses clearly that Congress did not intend [fol. 7110] that a merger or acquisition would be unlawful merely by reason of the elimination of competition between two business enterprises. It is argued that the basic test is whether, after considering all of the relevant factors, there is a reasonable probability of a significant reduction in the vigor of competition.

It is the opinion of this Court that the defendants have correctly stated the proper test. As mentioned previously, the key factor in all the antitrust laws is the preservation of vigorous competition. Unfortunately, Congress has not spelled out any definite formula for judging the legality of a merger under Section 7. Consequently, several different tests have been used or suggested, many of which have been subjected to severe criticism. However, the most practical one, from this Court's point of view, is that recognized in *American Crystal Sugar Co.* v. *Cuban-American Sugar Co.*, 259 F. 2d 524, 527 (1958):

> "And the ban on a substantial lessening of competition 'in any line of commerce in any section of the country,' requires, for determination of a violation, first, a definition of a relevant market in which a lessening of competition has probably occurred and, second, analysis of the nature and extent of the competition within that market. Consequently, the parties are agreed that an acquisition is not illegal because of its impact on competition between the corporations involved: that the proper test is one of the *qualitative* substantiality of the resulting effect on competition in the relevant market. We too agree. We hold that [fol. 7111] only an acquisition which in the long run may reasonably be expected to substantially lessen competition within a relevant market, will violate Section 7 as amended." (Emphasis supplied)

The "qualitative substantiality" test, in contradistinction to "quantitative substantiality", requires an appraisal of all the relevant factors, not merely a determination of the aggregate share of the market which would be held by the merged banks. A qualitative analysis is the only procedure which this Court feels justified to follow. This type of an approach, however, is not without difficulty. Involved is a selection of those factors which can be considered relevant.

The Court will discuss and answer the following relevant questions: (1) How much of an increase in concentration will be brought about by the merger? (2) Will the increase in concentration give the merged bank the power to control the price and supply of banking services? (3) Will the merger eliminate a substantial competitor from the market? (4) What is the competitive situation among commercial banks in the relevant market today? (5) What will probably be the competitive situation after the merger? (6) What is the probability of a new commercial bank coming into existence in the four-county area? (7) What is the history of defendants with respect to prior mergers? [fol. 7112] The Court is not unmindful of the fact that the relevancy of many of these factors has been challenged more than once. Nevertheless, the Court believes that the answers to these questions, considered collectively, rather than individually, will be valuable in predicting the vigor of competition in the relevant market after the merger. Perhaps other questions might also be posed. The Court, however, thinks that those presented are sufficient to give the correct answer. It should be noted that in this discussion, the Court will not advert to the benefits of the proposed merger. The Court is convinced that the merger will definitely benefit the community, but does not consider this particularly relevant in the present discussion of the question posed. The questions and discussions thereon follow:

(1) Increase in Concentration: As of December 31, 1960, there were 41 commercial banks with head offices in the four-county area, operating 284 commercial banking offices throughout Philadelphia, Bucks, Montgomery and Delaware counties. The largest bank, as of June 30, 1960, had total assets equal to 22.9% of the assets of all commercial

banks with head offices in the four-county area. PNB ranked second with 21% and Girard third with 16.1%. After the merger, the defendants would have approximately 37.1% of all the assets of all commercial banks within the four-county area.

[fol. 7113] PNB, as of October 3, 1960, had total net loans equal to 19.8% of the total loans made by all commercial banks with head offices in the four-county area. Girard had 14.6% of the total. The remaining three largest commercial banks in the four-county area, as of the same date, had 23.8%, 10.2%, and 9.1% respectively, of total net loans of all commercial banks with head offices in the four-county area. The combined bank would hold approximately 34% of all the loans of all commercial banks with head offices in the four-county area.

PNB, as of October 3, 1960, had total deposits equal to 21.3% of the total deposits of all commercial banks with head offices in the four-county area. Girard had 14.5% of the total. The other three largest commercial banks, as of the same date, had total deposits representing 22.1%, 9.9% and 9.3%, respectively, of total deposits of all commercial banks with head offices in the four-county area. The combined bank would hold approximately 36% of all the deposits of all commercial banks with head offices in the four-county area.

The defendants rebut this increase in concentration charge with some figures of their own. Although the Court does not consider concentration in other cities decisive in this case, some of the percentage figures are nevertheless worthy of mention and consideration. If the 53 reserve and central reserve cities of the Federal Reserve System are ranked in the order of the percentage of total com-
[fol. 7114] mercial banking assets in each city held by the largest commercial bank in that city as of June 1956, Philadelphia would, after the proposed merger, rank 32nd with 36.16%. Of the 224 cities in the United States with populations over 500,000 in 1956, 190 had a commercial bank with 35% or more of the total commercial banking assets in the city. There are four commercial banks in the United States, each with a lending limit greater than the aggregate of the lending limits of all the commercial banks in Philadelphia. Each of 20 commercial banks in the United

States has a lending limit greater than that of any commercial bank in Philadelphia, and 9 of these are in cities smaller than Philadelphia. 13 such banks, 4 of which are in cities smaller than Philadelphia, have a lending limit greater than that of the proposed merged bank. The Court finds that no dangerously potential concentration will result from this merger.

(2) Power to Control Price and Supply of Banking Services: The plaintiff has not pressed this point in its post-trial brief. However, Dr. Oscar Goodman, Professor of Finance at the Graduate School of Business of Northwestern University, testified for the plaintiff that the merged bank would have the power to affect the price and supply of available bank credit within the four-county area. The Court is satisfied, however, that defendants have proved this to be impossible. Entirely too much [fol. 7115] competition exists at all levels to permit such an occurrence. The merged bank would lose a substantial amount of business in a brief period of time if it attempted to dictate the price and/or control the supply of credit in the four-county area. The increase in size would not be sufficient for market domination. Because there are so many alternative choices for borrowers of all sizes, the merged bank would be unable to cause its competitors to raise service charges or interest rates, or prevent any borrower from having his banking needs met by other commercial banks.

(3) Elimination of a Substantial Competitor: Defendants do not (indeed they cannot) deny that substantial direct competition will be eliminated by the merger. PNB and Girard compete in the offering of banking services as well as in the acquisition of branch sites in the contiguous three counties. A substantial part of the transcript of testimony is directed to this area. However, the figures previously set out speak for themselves: Nothing would be gained in reciting the additional facts with respect to this phase of the case. Suffice it to state that the plaintiff has established that PNB and Girard do engage in substantial direct competition one with the other, but the Court, as discussed more fully infra, finds that the elimination of one competitor will not result in a lessening of vigorous competition in the commercial banking field.

[fol. 7116] (4 and 5) Competition: It is fair to say that competition among commercial banks in the four-county area is extremely vigorous. The plaintiff has not suggested otherwise; but, notwithstanding the established fact that Girard, a substantial competitor of all commercial banks in the four-county area, would be eliminated by the merger, the defendants contend that competition in the four-county area would be intensified *after the merger*.

Defendants produced several witnesses, including many representatives of other Philadelphia commercial banks, who testified that competition, after the merger, would be increased rather than lessened. For example, W. Carlton Harris, Emeritus Professor of Finance at the University of Pennsylvania and a director of the Broad Street Trust Company, testified that the merger would sharpen and probably increase competition among Philadelphia banks. He stated that this was the effect of previous mergers in the area. Samuel Weinrott, Chairman of the Board of Industrial Valley Bank and Trust Company, asserted that banking competition in Philadelphia today is greater than it was ten years ago. It was his opinion that competition would be increased by the merger. Mr. Weinrott stated, as did many of the other bankers, that he expected to acquire new business from defendants' customers who might have accounts with both PNB and Girard, or who might not approve of the merger for one reason or another. He [fol. 7117] also testified that smaller banks can and do compete actively with larger banks, and that previous mergers have not hindered the growth of the smaller banks. This opinion was substantiated by the exhibits produced, charting the rate of growth of the small commercial banks. Albert T. Mason, President of Liberty Real Estate Bank and Trust Company, Hubert J. Horan, Chairman of the Board of Broad Street Trust Company, and S. Harry Galfand, Chairman of the Board of Citizens and Southern Bank, all repeated in substance the testimony of Mr. Weinrott.

Lewellyn A. Jennings, Senior Vice-President of the Republic National Bank of Dallas, and former Acting Comptroller of the Currency, testified that competition among commercial banks was never keener and that all commercial banks are after mass banking business, competing for

small and medium size loans. It was also his opinion that the merger will increase existing and potential competition in commercial banking in the Philadelphia area.

Dr. Warren Smith, Professor of Economics at the University of Michigan, however, testified that the elimination of a large lender will significantly reduce the degree of competition because an important alternative source of credit for many borrowers, over a rather wide area, will be eliminated. Indeed, this is the crux of the plaintiff's case. He, Professor Smith, without any banking experi- [fol. 7118] ence, stands alone in this forecast which the Court does not accept.

It is true that one alternative source of credit will be eliminated. It should be noted, however, that borrowers would have available the following alternatives after the merger: 41 commercial banks for loans up to $10,000; 39 for loans up to $25,000; 35 for loans up to $50,000; 27 for loans up to $100,000; 18 for loans up to $250,000; 10 for loans up to $500,000; 7 for loans up to $1,000,000; 4 for loans up to $2,500,000; 3 for loans up to $5,000,000; 2 for loans up to $7,000,000; and 1, as a result of the merger, for a loan up to $15,000,000. If these alternative sources intend to compete more vigorously than before, thereby increasing rather than decreasing the competitive pressure, Dr. Smith's conclusion that the merger will significantly reduce the degree of competition does not necessarily follow. Moreover, the main bone of contention here is that the merger will have its most serious effects on small and medium size borrowers. The above figures, however, indicate to the Court that there are more than an adequate number of sources for these types of borrowers. In fact, it has been established that a borrower turned down by three banks would be unable, with few exceptions, to obtain a loan at another commercial bank. And, of course, those borrowers in need of larger loans are not limited to the few banks in Philadelphia capable [fol. 7119] of making such a loan.

It is the conclusion of this Court that all indications are that competition will be even more vigorous after the merger than before.

(6) Probability of New Entrant: Plaintiff contends that it is very unlikely a substantial competitor will enter the

market. Although the number of commercial banks in the four-county area has decreased from 108 in 1947 to 42 in 1960, it is nevertheless a fact that a commercial bank has been established in the last decade just outside Philadelphia, the Bank of Old York Road, which has experienced rapid and substantial growth. It would be pure conjecture on the part of this Court, however, to predict that a substantial competitor will not likely enter the market in the future.

(7) Past Acquisitions; It has been established that a substantial part of the present size of both PNB and Girard has been achieved as the result of merger and consolidation in the last ten years. However, it has been shown that mergers with existing banks in the suburbs of Philadelphia were, in many cases, the only feasible way for larger banks to follow the migration of many of their customers into these areas. In addition, in many cases, it appears that small banks in the four-county area have found mergers with larger banks to be a solution to their problems of inadequate banking services, rising costs, and [fol. 7120] management succession.

In summary, it can be said that although the merger will increase concentration to the percentage figures given, the merged bank would have no power to control the price and supply of credit, nor could it dominate the market in any manner. And, although a direct substantial competitor will be eliminated, the only competent testimony upon the subject establishes that competition will be more vigorous after the merger. Also, although the commercial banking field is not an easy one to enter, it cannot be concluded that a new bank will not be established in the four-county area in the future. Finally, although the defendants have engaged in prior mergers, these mergers have had valid business purposes as the motivating force.

Viewing all this collectively, the Court can see no reasonable probability that competition among commercial banks in the four-county area will be substantially lessened.

Moreover, it is difficult to perceive a reasonable probability that this merger will tend to create a monopoly in commercial banking in the four-county area. Certainly, every time one bank in an area is eliminated, the path toward an eventual monopoly or oligopoly is shortened.

This can be said for the most insignificant combination. But this does not mean that a monopoly is inevitable. Especially is this true in the area of bank mergers. Every future merger in the four-county area will be subject to [fol. 7121] the close scrutiny of the appropriate state and federal agency. At some point any trend, if discernible in the future, will be checked. Although some of plaintiff's witnesses, for the most part independent bankers from smaller communities throughout the country, were of the opinion that approval of this merger would trigger others in the four-county area, as well as the remainder of the United States, this Court is not prepared to concur. The competitive situation that exists in the four-county area, with the many alternatives available to a prospective customer, leads to the inescapable conclusion that any tendency to monopoly or oligopoly at this stage is non-existent. What happens in the future must be left to the appropriate federal banking agency, and, if necessary, to another Court at another time. All that is being said is that this particular merger will not tend to create a monopoly.

The Sherman Act

This Court has also been called upon to decide whether the combination of PNB and Girard will result in an unreasonable restraint of trade or commerce in commercial banking in the four-county area in violation of Section 1 of the Sherman Act. Of course, the same assumption with respect to the relevant geographic market applies here as it did when the Clayton Act was considered.

Very briefly it can be stated that a merger which does [fol. 7122] not violate the Clayton Act can hardly be held to violate the more stringent standards of the Sherman Act.

Even aside from any consideration of the Clayton Act, however, the plaintiff has failed to establish by a fair preponderance of the evidence that the proposed merger constitutes an unreasonable restraint of trade or commerce. To warrant an injunction restraining an alleged violation of Section 1, there must be a definite factual showing of illegality. *Standard Oil Co.* v. *United States*, 283 U. S. 163, 179 (1931).

In *United States* v. *Columbia Steel Co.*, 334 U. S. 495, 527-528 (1948), the Supreme Court laid down some guidelines to be considered when an acquisition of assets is being challenged under the proscriptions of the Sherman Act:

> "It is first necessary to delimit the market in which the concerns compete and then determine the extent to which the concerns are in competition in that market. If such acquisition results in or is aimed at unreasonable restraint, then the purchase is forbidden by the Sherman Act. In determining what constitutes unreasonable restraint, we do not think the dollar volume is in itself of compelling significance; we look rather to the percentage of business controlled, the strength of the remaining competition, whether the action springs from business requirements or purpose to monopolize, the probable development of the industry, consumer demands, and other characteristics of the market. We do not undertake to prescribe any set of percentage figures by which to measure the reasonableness of a corporation's enlargement of its activities by the purchase of the assets of a competitor. The relative effect of percentage command of a market varies with the setting in which that factor is placed."

[fol. 7123] The Court does not intend to repeat the facts considered when discussing the alleged violation of the Clayton Act. Suffice it to state that a re-evaluation of them, in light of what has been said above, convinces the Court that the proposed merger meets the "reasonable" test and does not violate Section 1 of the Sherman Act.

Findings of Fact and Conclusions of Law

The Government has submitted 600 proposed Findings of Fact and numerous proposed Conclusions of Law. The Court has reviewed these in great detail. Many of them have to do with separate lines of commerce which clearly are not applicable since the Court has found that the line of commerce is commercial banking in all its integral parts. An inordinate number refer to the four-county area which the Court has determined not to be the relevant market. Many have no bearing on the decision of the action.

The Court, therefore, makes the following rulings on the Government's proposed Findings of Fact:

Nos. 1 to 8 incl. affirmed; 9 and 10 refused as stated; 11, 12, 13 affirmed; 14 refused as stated; 15, 16, 18 affirmed; 19 refused as stated; 20 to 23 incl. affirmed; 24, 25 refused as stated; 26, 27, 28 affirmed; 29, 30, 31 refused as stated; 32 affirmed; 34 refused as stated; 35 affirmed; 36 refused as stated; 37 affirmed; 38 refused as stated; 39, 40 affirmed; [fol. 7124] 41 refused as stated; 42 affirmed; 43 refused as stated; 44 to 47 incl. affirmed; 48 refused as stated; 49 affirmed; 51, 52, 53 refused as stated; 54 to 68 incl. affirmed; 69 refused as stated; 70 affirmed; 71 refused as stated; 72, 73, 74, affirmed; 75 refused as stated; 76 to 82 incl. affirmed; 83 refused as stated; 84, 85 affirmed; 86, 87 refused as stated; 88, 89, 90 affirmed; 91 to 157 incl. refused as stated as not pertinent to the decision of this case; 158 to 231A refused as stated, since these requests are designed to establish separate lines of commerce, and the Court has determined commercial banking, in all its relevant integral parts, is the line of commerce involved; 232 to 285 incl., the statistical tables are approved; the conclusions therefrom which the plaintiff asked the Court to draw are denied, and the remaining parts are refused as stated; 286 to 290 incl. affirmed; 291 refused as stated; 292 to 297 incl. affirmed; 298 refused as stated; 299 to 318 incl. affirmed; 319 refused as stated; 320 to 325 affirmed; 326 refused as stated; 327, 328 affirmed; 329, 330, 331 refused as stated; 332 affirmed; 333 to 335 incl. refused as stated; 336 to 345 affirmed; 346 refused as stated; 347, 348, 349 affirmed; 350 refused as stated; 351 affirmed; 352 refused as stated; 353 affirmed; 354 refused as stated; 355, 356 affirmed; 357 refused as stated; 358 affirmed; 359 refused as stated; 360 affirmed; 361, 362 refused as stated; 363 to 384 incl. affirmed; 385, 386 refused as stated; 387, [fol. 7125] 388, 389 affirmed; 390, 391 denied; 392, 393, 394 affirmed; 395, 396 refused as stated; 397 to 401 incl. denied; 402 to 431 incl. refused since they presuppose a four-county relevant market which the Court has found to be nonexistent; 432 to 458 affirmed; 459 refused as stated; 460, 461 affirmed; 462 denied; 463 to 471 affirmed; 472, 473 refused as stated; 474 affirmed; 475 to 600 incl. refused as stated; these requests are argumentative, do

not completely reflect the situations developed by the testimony, and do not reflect the findings of the Court as set forth in the Opinion.

The Conclusions of Law submitted by the plaintiff are refused as stated.

The affirmation of plaintiff's proposed Findings is subject to the Findings of the Court as to the facts of the case set forth in the Opinion, and in the event of any possible conflict between the proposed Findings of Fact and statements made in the Opinion, the language of the Opinion shall govern.

Of the defendants' requested Findings of Fact, Requests Nos. 54, 55, 58 to 92, and Request No. 162 are refused as stated and the remainder Requests are affirmed.

In the event of any possible conflict between defendants' requested Findings of Fact and statements made in the Opinion, the language of the Opinion shall govern.

[fol. 7126] All Conclusions of Law requested by the defendants are refused as stated.

Resume

As before stated, this is the first action tried after the passage of the Bank Merger Act of 1960. The controversy inherent in the case between co-ordinate branches of the Executive Department of Government is to be regretted. Congress, in passing the Bank Merger Act, deliberately fixed the responsibility of approving or disapproving proposed mergers of national banks in the Comptroller of the Currency. This responsibility was fixed despite vigorous protests of individual bankers and the Department of Justice. The Comptroller of the Currency then, by Act of Congress, was of necessity required to consider the reports of the Federal Reserve Board, the Federal Deposit Insurance Corporation, and the Attorney General, with respect to the competitive factors involved. All three of these Departments of Government reported that in the opinion of their experts, the consummation of the proposed merger would adversely affect competition in the Philadelphia area. The Federal Deposit Insurance Corporation concluded that the merger would not be adverse in the regional, national and international field of competition. With these reports available to him, and after

considering them, the Comptroller, in pursuance of his [fol. 7127] statutory duty, reviewed them and despite their content, approved the merger as not involving undue concentration of banking power, not tending toward a monopoly, not destructive of competition in the commercial banking field, and definitely in the public interest. The Court, after a full trial, agrees completely with the conclusions of the Comptroller of the Currency.

This is one of the few instances in which one Department of the Government, after having been consulted and its advice not being followed, has challenged in the Court the findings of a co-ordinate Department of the Executive Branch of the Government on the basis of disagreements between Departments of our Government. And what is the expertise of these three dissenting co-ordinate branches of the Executive Department that prompted this challenge? The Courts have uniformly held that once Congress has reposed its confidence in the expertise of a particular Department, the Courts should not substitute its judgment in the place and stead of the Department involved. The Government has asked this Court, without the production of a single shred of evidence, and on the basis of reports no more illuminating than that of the Comptroller of the Currency, to give legal effect to the conclusions of the dissidents, rather than the Department charged with the responsibility.

This Court fails to see how any court, without some fac- [fol. 7128] tual basis being laid therefor, could accede to any such request and this is all the more true in this particular case where experienced, substantial bankers throughout this entire area have appeared in open court, subjected themselves to searching cross-examination, and have unanimously demonstrated that the proposed merger would not cause an undue concentration of banking, would not tend toward a monopoly, and definitely would increase the vigor of competition which the Congress of the United States from the passage of the Sherman Act down to the present date has, by law, attempted to foster.

The Court was not impressed with the attempts of the Government to show that banking is of minor importance in the life of a community generally and of almost absolute unimportance in the business life of the community.

The Government, in its attempt to establish this contention by testimony—that no single particular individual industrial organization had ever entered a particular territory because of the presence or absence of banking facilities, has ignored the industrial history of the United States. Should one ever speculate as to whether any industry would enter a community without banking facilities, the answer would be completely obvious. Historically, banking facilities have preceded industry in every community.

The Government also attempted to show that by combining the lending limits of all Philadelphia banks, bor- [fol. 7129] rowers in the larger categories could be well accommodated. This ignores again the realities of the situation and the positive testimony that in the larger industries, there is a decided reluctance on the part of financial officers to be made the subject of participating loans. With the originating bank, there is also an aversion to these loans as it requires considerable negotiation and technical handling which is to be avoided wherever possible.

The evidence demonstrated beyond peradventure of doubt that the Philadelphia area, plus parts of Delaware and New Jersey, and also New York City, as well as most of the northeastern part of the United States, is the area of active competition for Philadelphia commercial banks and for the proposed merged bank. The testimony discloses that the competitive effect upon all Philadelphia commercial banks will be minimal. The larger bank, however, will be able to compete on better terms and in a better atmosphere with the banks of other cities and states that have been draining this area of banking business which might well be and perhaps properly should be handled here, and which cannot be handled under present circumstances. That it will benefit the city and area has been established clearly by a fair preponderance of the evidence, as has been set forth in the Findings of Fact of the defendants previously affirmed.

There is nothing in this record which supports the aver- [fol. 7130] ments of the complaint that the proposed merger involves an unlawful combination in restraint of trade; would result in or tend toward monopoly, or violate the provisions of the Clayton Act, if applicable; and the

proposed merger certainly violates no provision, either express or implied, contained in the Bank Merger Act of 1960.

Since the proposed merger contains none of the defects alleged in the Government's case and will be in the public interest, it follows that judgment must be entered in favor of the defendants and against the plaintiff.

Conclusions of Law

1. The Court has jurisdiction of the parties and of the subject matter.

2. The Bank Merger Act of 1960 does not, by its terms, remove bank mergers from the application of either the Sherman Antitrust Act or the Clayton Act.

3. The approval of the merger by the Comptroller of the Currency, under the Bank Merger Act, is not the final and exclusive determination of its legality.

4. The proposed merger of the Philadelphia National Bank and the Girard Trust Corn Exchange Bank is not within the scope of Section 7 of the Clayton Act.

5. Plaintiff has failed to prove that the merger would violate Section 7 of the Clayton Act, even assuming the [fol. 7131] same to be applicable, because the preponderance of credible evidence shows:

(a) That the four-county area is not the relevant geographic market (see plaintiff's requests 5, 6, and 372);

(b) Even assuming that the four-county area is the relevant geographic market, credible evidence shows that the proposed merger will not substantially lessen competition or tend to create a monopoly in commercial banking in the four-county area.

6. The plaintiff has failed to prove by a fair preponderance of credible evidence that the merger will unreasonably restrain trade and commerce in commercial banking either in the relevant geographic market or in the four-county area.

7. Defendants are entitled to judgment dismissing the complaint in its entirety on the merits.

An order dismissing the action with prejudice will be filed concurrently with this opinion.

Civil Action No. 29287

UNITED STATES OF AMERICA, Plaintiff,

v.

THE PHILADELPHIA NATIONAL BANK AND GIRARD TRUST CORN EXCHANGE BANK, Defendants.

JUDGMENT—January 15, 1962

And Now, to wit, this 15th day of January, 1962, for the reasons set forth in the Opinion filed concurrently herewith, it is Ordered, Adjudged and Decreed that the prayers in the Complaint of the plaintiff, United States of America, that the agreement of consolidation between defendants, The Philadelphia National Bank and Girard Trust Corn Exchange Bank, be adjudged and decreed to be unlawful, in violation of Section 1 of the Sherman Act and Section 7 of the Clayton Act, and that the defendants, The Philadelphia National Bank and Girard Trust Corn Exchange Bank, be enjoined from carrying out the said agreement of consolidation, be and they are hereby Denied; further, that the action be and it is hereby Dismissed on the Merits, with prejudice.

By the Court:

Thomas J. Clary, Ch. J.

[Title omitted]

STIPULATION—Filed February 2, 1962

It is hereby stipulated and agreed by and between the parties to the above entitled action that:

1. The motion filed by the United States on January 15, 1962 to stay all proceedings on the Final Judgment entered in this action on January 15, 1962 is hereby withdrawn.

2. Defendants, The Philadelphia National Bank and Girard Trust Corn Exchange Bank, agree that they will not merge or consolidate until after March 12, 1962 or until after decision by the Supreme Court of the United States on an appeal by the United States if such appeal is taken from the said Final Judgment on or before March 12, 1962.

3. The following schedule will be adhered to in the filing of any of the papers indicated with respect to any appeal by the United States:

(a) Jurisdictional statement—March 12, 1962;
(b) Motion to affirm—April 11, 1962;
(c) Reply to motion to affirm—May 2, 1962.

Donald G. Balthis, Attorney, Department of Justice. Philip Price, Attorney for Girard Trust Corn Exchange Bank. Arthur Littleton, Attorney for The Philadelphia National Bank.

Approved, February 2nd, 1962:

Thomas J. Clary, Chief Judge.

NOTICE OF APPEAL TO THE SUPREME COURT OF THE UNITED STATES—Filed February 26, 1962

I. Notice is hereby given that the plaintiff, United States of America, hereby appeals to the Supreme Court of the United States from the final judgment entered in this action on January 15, 1962, dismissing the complaint. This appeal is taken pursuant to 15 U.S.C. 29.

II. The clerk will please prepare a certified transcript of the record in this cause for transmission to the Clerk of the Supreme Court of the United States, and include therein the entire record before the district court, including the pleadings, the transcript of testimony, the exhibits submitted by the parties and this notice of appeal.

III. The ultimate question presented by this appeal is whether the proposed consolidation of the Philadelphia National Bank and Girard Trust Corn Exchange Bank is a combination in unreasonable restraint of trade in violation of Section 1 of the Sherman Act, or has effects which may substantially lessen competition or tend to create a monopoly in violation of Section 7 of the Clayton Act.

This includes, but is not limited to, the following subsidiary questions:

(a) Whether the four-county area in which the defendants maintain offices and from which they derive most of their business is an appropriate geographical market in which to measure the effects of the consolidation upon competition.

[fol. 7135] (b) Whether the proposed consolidation constitutes an acquisition of stock or other share capital within the meaning of Section 7 of the Clayton Act, and, hence, is subject to that section.

UNITED STATES OF AMERICA, APPELLANT

v.

THE PHILADELPHIA NATIONAL BANK AND GIRARD TRUST CORN EXCHANGE BANK

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA

JURISDICTIONAL STATEMENT

OPINION BELOW

The opinion of the district court (App., *infra*, 1a-49a) is not yet reported.

JURISDICTION

The judgment of the district court was entered on January 15, 1962 (App., *infra*, 50a). The notice of appeal was filed by the United States on February 26, 1962. The jurisdiction of this Court is conferred

by Section 2 of the Expediting Act of February 11, 1903, 32 Stat. 823, as amended, 15 U.S.C. 29. *United States* v. *Columbia Steel Co.*, 334 U.S. 495; *United States* v. *duPont & Co.*, 353 U.S. 586.

QUESTION PRESENTED

The ultimate question presented by this appeal is:

1. Whether the proposed consolidation of The Philadelphia National Bank and Girard Trust Corn Exchange Bank violates the antitrust laws because it is a combination in unreasonable restraint of trade, in violation of Section 1 of the Sherman Act, or its effect may be substantially to lessen competition or to tend to create a monopoly, in violation of Section 7 of the Clayton Act.

Subsidiary to the appraisal of the effects of the consolidation upon competition are the following questions:

2. Whether the four-county area in which the defendants maintain offices and from which they derive most of their business is an appropriate geographical market in which to measure the effects of the consolidation upon competition.

3. Whether the proposed consolidation constitutes an acquisition of stock or other share capital within the meaning of Section 7 of the Clayton Act, and, hence, is subject to that section.

STATUTES INVOLVED

Section 1 of the Sherman Act, 26 Stat. 209, as amended, 15 U.S.C. 1, provides in pertinent part:

> Sec. 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is declared to be illegal * * *. Every person who shall make any contract or engage in any combination or conspiracy declared * * * to be illegal shall be deemed guilty of a misdemeanor * * *.

Section 7 of the Clayton Act, 38 Stat. 731, as amended, 64 Stat. 1125, 15 U.S.C. 18, provides in pertinent part:

> Sec. 7. No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.

STATEMENT

The proposed consolidation of The Philadelphia National Bank ("PNB") and Girard Trust Corn Exchange Bank ("Girard") was approved by their boards

of directors on November 15, 1960 (Fdg. 22[1]). As required by the Federal Deposit Insurance Act, 74 Stat. 129, 12 U.S.C. (Supp. II) 1828(c), the proposed merger was submitted to the Comptroller of the Currency for his approval (see 12 U.S.C. (Supp. II) 215(a)).

The Attorney General (Ex. G-162), the Federal Reserve Board (Ex. G-161), and the Federal Deposit Insurance Corporation (Ex. G-163) all reported that the merger would have substantial anticompetitive consequences in the four-county Philadelphia metropolitan area; the Comptroller, however, approved the merger on February 24, 1961 (Fdgs. 27, 463, 464). The complaint in the present case, filed on February 25, 1961, charged that the proposed consolidation was a combination in unreasonable restraint of trade and commerce and, if carried out, would eliminate all competition between defendants, in violation of Section 1

---

[1] "Fdg." refers to those findings proposed by the government which were specifically adopted by the district court (App. 43a-45a). "Govt. Prop. Fdg." refers to those proposed findings (Govt. Prop. Fdgs. 402-431), setting forth statistics concerning the defendants' share of business in the four-county Philadelphia metropolitan area which the government contended was the relevant geographical market (see *infra*, pp. 15-19). The statistics were rejected by the court not because of any dispute as to their accuracy, but solely because the court considered them irrelevant "since they presuppose a four-county relevant market which the court has found to be nonexistent" (App. 44a). In its opinion, the court explicitly accepted the correctness of the statistics (App. 6a-7a) and utilized them in its arguendo analysis of the four-county market (App. 34a-35a; see *infra*, pp. 10, 11). Those statistics are therefore relied upon here without reference to underlying exhibits. "Defts. Fdgs." refers to those findings proposed by defendants which were specifically adopted by the district court (App. 45a).

of the Sherman Act; and that the effect of the proposed merger might be substantially to lessen competition or to tend to create a monopoly, in violation of Section 7 of the Clayton Act. The consolidation has not yet taken place, and, in accordance with a stipulation entered into by defendants and the government, the consolidation will not take place pending the outcome of this appeal.

After extensive discovery, the case was tried before Chief Judge Clary from June 5 to August 3, 1961. The trial record consists of a 4,000-page transcript of testimony and approximately 300 exhibits, most of which are internal documents of the defendants and various statistical analyses. The parties presented evidence on the nature of commercial banking as compared to other financial institutions, and the nature of competition between commercial banks; the origin of defendants' business and other factors relevant to establishing the geographical market; the scope of defendants' business and the competition between them which would be eliminated by the proposed merger; the present concentration of commercial banking, the increase which would result from the merger, and the impact of the merger upon competition; the prior mergers of the defendants; and an appraisal of the reasons advanced by the banks for the proposed consolidation.

1. *The merging banks.*—PNB is the second largest commercial bank and Girard is the third largest commercial bank in the four-county Philadelphia metropolitan area. As of June 30, 1960, PNB had total

assets of $1,086,147,170, deposits of $946,306,784, and loans of $523,612, 316, and Girard had total assets of $740,920,000, deposits of $650,790,000, and loans of $399,362,000. Each conducts a general commercial banking business—PNB through 28 offices (11 located in Philadelphia and 17 in Delaware, Bucks, and Montgomery Counties) and Girard through 38 offices (20 located in Philadelphia and 18 in Delaware and Montgomery Counties).[2] (Fdgs. 7-8, 12-13; 394; PNB Answer, Par. 8; Girard Answer, Par. 9.) The percentage of the dollar volume of PNB and Girard, respectively, which originated in these four counties was as follows: 54% and 63% of their commercial and industrial loans; 75% and 79% of their loans to individuals; 74% and 84% of their real estate loans; 41% and 62% of their lines of credit; 94% and 72% of their personal trusts; 81.4% and 94% of their time and savings deposits; 55.8% and 77.2% of their demand deposits (Fdgs. 258-282).

As of June 1960, of the more than $5 billion in assets held by the 42 commercial banks with head offices in the four-county Philadelphia metropolitan area, PNB had 21%, Girard, 14.7%, and the consolidated bank would have had about 35.7%. Of almost $1.25 billion in commercial and industrial loans of the 42 banks, PNB had 24.3%, Girard, 16.5%, and the consolidated bank would have had 40.8%. As of October 1960, of the total deposits of more than $4.6 billion in the 42 banks,

[2] Pennsylvania law permits banks to open offices in their home county and in any contiguous county (7 Pa. Stat. 819-204.1 (Purdon's ed. Supp.); Tr. 2301). PNB and Girard, with home offices in Philadelphia County (coincident with the City of Philadelphia), may open branches only in Philadelphia, Delaware, Bucks, and Montgomery Counties.

PNB had 21.3%, Girard, 14.5%, and the consolidated bank would have had 35.8%. (Govt. Prop. Fdgs. 404-405, 410-411, 419.) [3]

Defendant banks have played an active role in the substantial increase in the concentration of commercial banking in recent years. From 1947 to 1960, the number of commercial banks with head offices in the four-county area dropped from 108 to 42 (App. 39a-40a). Since 1950, PNB has acquired 9 banks operating 18 offices in the four-county area, while Girard has acquired 6 banks operating 32 offices. For PNB and Girard, respectively, these acquisitions have accounted, during the decade 1950-1959, for 63% and 91% of the deposit growth, 12% and 37% of loan growth, and 59% and 85% of asset growth (Fdgs. 432-458).

The proposed consolidated bank will alter radically the existing competitive situation among all commercial banks with head offices in the four-county area. Instead of two front-running banks of approximately equal size—First Pennsylvania Banking & Trust Co. and PNB—with smaller competitors of decreasing size beginning with Girard, the proposed consolidated bank

---

[3] Other statistics showing the positions of PNB, Girard, and the proposed consolidated bank among commercial banks in the four-county area are as follows, using 1960 data in the record (Govt. Prop. Fdgs. 402-431):

	PNB (%)	Girard (%)	Total (%)
Number of offices	9.5	13.4	22.9
Capital funds	19.6	15.5	35.1
Total loans	19.8	14.6	34.4
Loans to individuals	10.8	15.4	26.2
Real estate loans	20.1	10.4	30.5
Personal trusts (omitting 7 banks with small trust activities)	3.8	23.5	27.3
Total IPC deposits (of individuals, partnerships, and corporations)	16.8	15.6	32.4
Time deposits	14.7	15.2	29.9
Demand deposits	21.9	14.7	36.6
IPC demand deposits	18.2	15.9	34.1

will be far larger than any of its competitors. With respect to total deposits, the merged bank will be 1.6 times the size of its nearest rival and 3.6 times the size of the next largest bank; with respect to total net loans, the bank will be 1.5 times the size of its nearest rival and 3.3 times the size of the next largest bank; with respect to total capital funds, the bank will be twice the size of its nearest rival and three times the size of the next largest bank (Ex. G-196).[4]

2. *The agreement of consolidation.*—The agreement of consolidation between the two banks (Ex. G-119) was made pursuant to the authority given by, and in accordance with the express terms of, 12 U.S.C. (Supp. II) 215. Under Section 1 of the agreement, the two banks are to be consolidated under the PNB charter. Section 5 provides that the resulting consolidated "Association shall be deemed to be the same corporation as each of the Consolidating Banks * * *," but that "[t]he corporate existence of Girard

---

[4] The effect of the proposed consolidation on the relative size of the six largest banks in the four-county area, as of 1960, will be as follows (Ex. G-196):

Banks	Relative size (largest equals 100) Total deposits	Total net loans	Total capital funds
Before Consolidation			
First Pa. B & T Co.	100	100	100
PNB	97	83	99
Girard	65	62	79
Provident Tradesmens B & T Co.	45	43	61
Fidelity Phila. Trust Co.	42	38	46
Central-Pa. Nat'l Bank	24	25	26
After Consolidation			
Consolidated Bank (PNB & Girard)	100	100	100
First Pa. B & T Co.	62	69	56
Provident Tradesmens B & T Co.	28	30	34
Fidelity Phila. Trust Co.	26	26	26
Central-Pa. Nat'l Bank	15	17	15
Broad Street Trust Co.	8	10	7

shall be merged into and continued in Philadelphia National, which shall continue in existence as the Association * * *." All property rights, franchises, and interests of the two banks are to be vested in the consolidated bank without any conveyance or transfer, and the consolidated bank is to be responsible for all the liabilities of the two banks. Under Section 6, each share of outstanding PNB stock "shall remain outstanding as one share of the capital stock of the [consolidated] Association * * *," and each share of outstanding Girard stock "shall be converted into 1.2875 shares of the capital stock of the Association * * *." Section 6 further provides that each holder of outstanding PNB stock "shall retain his certificate, which shall automatically remain a certificate representing shares of stock in the Association * * *." On the other hand, "each holder of an outstanding certificate representing shares of Girard stock shall surrender the same to the Association promptly after the Effective Date and receive in exchange therefor certificates representing the full number of whole shares of stock in the Association to which such shares of stock in Girard shall have been converted * * *."

3. *The district court's decision.*—The district court considered two preliminary issues with respect to the coverage of bank mergers under the antitrust laws. The court decided, favorably to the government, that approval of the merger by the Comptroller of the Currency does not exempt it from the antitrust laws (App. 12a-17a). The court further held, however, that the merger was not subject to Section 7 of the Clayton

Act (App. 17a-21a) on the ground that no acquisition of "stock or other share capital" was involved. For purposes of discussing the remaining issues, the court assumed *arguendo* that Section 7 of the Clayton Act was applicable (App. 21a).

Turning to the delineation of the relevant market, the court held that commercial banking as a whole—with its conglomeration of services and functions—constitutes a separate and distinct line of commerce for purposes of the Clayton Act, or a relevant product market for purposes of the Sherman Act (App. 24a-28a). The court decided, however, that the government had failed to prove that the four-county Philadelphia metropolitan area in which defendants maintain offices was a relevant section of the country for purposes of the Clayton Act, or a relevant geographical market for purposes of the Sherman Act (App. 29a-31a). It stated that the relevant section of the country must include "at the very least" the entire Delaware Valley and New York City, and probably includes the greater part of the northeastern United States. No statistics as to the competition of outside banks in the larger market area were offered by either the government or the defendant-banks. In considering the remaining issues, the court assumed that the four-county area was the appropriate relevant market (App. 31a), just as it had previously assumed the applicability of Section 7 of the Clayton Act.

The competitive impact of the consolidation in the four-county area was discussed primarily in terms of Section 7 of the Clayton Act. The court posed as the

ultimate question, "whether, after considering all of the relevant factors, there is a reasonable probability of a significant reduction in the vigor of competition" (App. 32a-33a), and discussed a number of subsidiary factors which it considered relevant.[5]

The court cited the percentages of PNB, Girard, and the proposed consolidated bank in assets, loans, and deposits among the other banks with head offices in the four-county area and noted, as defendants' rebuttal, the concentration figures in other cities, indicating that in many other cities the leading bank has higher percentages. Although the defendants' statistics were said to be "not decisive" (but "worthy of mention and consideration"), those statistics were the only basis indicated for the court's conclusion that "no dangerously potential concentration will result from this merger" (App. 34a-36a).[6]

The district court found that "PNB and Girard do engage in substantial direct competition one with the other" which would be eliminated. But it also found

---

[5] The court stated seven subsidiary "relevant questions," as follows (App. 34a): (1) How much of an increase in concentration will be brought about by the merger? (2) Will the increase in concentration give the merged banks the power to control the price and supply of banking services? (3) Will the merger eliminate a substantial competitor from the market? (4) What is the competitive situation among commercial banks in the relevant market today? (5) What will probably be the competitive situation after the merger? (6) What is the probability of a new commercial bank coming into existence in the four-county area? (7) What is the history of defendants with respect to prior mergers?

[6] On the second question posed, the court found that the merged bank will not have the power to control the price and supply of banking services in the four-county area (App. 36a-37a). The government had not contended that it would have such power.

that "elimination of one competitor will not result in a lessening of vigorous competition in the commercial banking field" (App. 37a). For this conclusion, the court relied upon testimony by defendants' witnesses that the vigorous competition between commercial banks in the Philadelphia area would not be lessened, but would be intensified. Even though an important competitor would be eliminated, the court considered the remaining 40 commercial banks as representing available alternatives up to their respective lending limits (the maximum amount which can be loaned to any one borrower, fixed by law at 10% of a bank's capital and surplus). It found that small and medium-size borrowers have adequate sources for their loans and that the larger borrowers are not limited to Philadelphia (App. 37a-39a).

As to the remaining factors, the court noted the decline in the number of commercial banks in the four-county area, but, on the basis of the successful establishment of one new bank in the last decade, it declined as "pure conjecture" to find that entry of a substantial new competitor in the market was unlikely (App. 39a-40a). The defendants' prior mergers were explained as motivated by valid business reasons—to follow customers into suburban areas and to solve problems of the smaller merged banks (App. 40a). In concluding the Clayton Act discussion, the court stated (App. 40a-41a): "Viewing all this collectively, the Court can see no reasonable probability that competition among commercial banks in the four-county area will be substantially lessened. * * * [T]his particular merger will not tend to create a monopoly."

Finally, the court turned briefly to consideration of the Sherman Act and held (App. 41a-43a) that "a merger which does not violate the Clayton Act can hardly be held to violate the more stringent standards of the Sherman Act." Citing *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 527-528, for the guidelines to be considered, the court stated without further discussion that "the proposed merger meets the 'reasonable' test and does not violate Section 1 of the Sherman Act."

THE QUESTIONS ARE SUBSTANTIAL

The proposed merger of the second and third largest commercial banks in the four-county Philadelphia metropolitan area with assets of one billion and three quarter billion dollars, respectively, would result in their becoming the largest bank in the area, far ahead of other banks, with approximately 35% of the business. The validity of this merger presents questions of marked importance in the application of the antitrust laws to horizontal combinations of competitors, and specifically, in this case, to horizontal combinations in the field of commercial banking. If the decision below represents the law, the antitrust laws will be largely impotent to cope with the current wave of commercial bank mergers. Because of the significance of the present case and the errors committed by the district court, probable jurisdiction should be noted.

The merger in the present case is a classical horizontal combination between direct substantial competitors, of a kind which this Court has not considered since the railroad merger cases in the 1920's. Moreover, the decision below is the first ruling on the merits

in an antitrust action filed by the Department of Justice against a proposed bank merger.[7] Two subsequent suits are now pending against bank mergers in which the government alleges violation of both the Sherman Act and Section 7 of the Clayton Act;[8] another suit is pending against a bank merger in which the government alleges only a violation of the Sherman Act;[9] and another pending complaint challenges under Section 7 the acquisition of two banks by a holding company.[10] The unique and essential role of commercial banking in the nation's economy makes preservation

---

[7] In *Transamerica Corp.* v. *Board of Governors*, 206 F. 2d 163 (C.A. 3), certiorari denied, 346 U.S. 901, the Federal Reserve Board sought to enforce Section 7 of the Clayton Act as authorized by Section 11 of that Act (15 U.S.C. 21). The court reversed on the ground that the Board's conclusion as to lessening of competition in a five-state area was inconsistent with its finding that the areas of effective competition were the banks' local communities. In *United States* v. *Firstamerica Corp.*, Civil Action No. 38139, U.S.D.C. N.D. Calif. (1959), acquisition of a bank by the defendant was challenged under Section 1 of the Sherman Act and Section 7 of the Clayton Act. The district court denied a motion to dismiss which sought to bar the action on the ground of prior approval by the Federal Reserve Board. This Court denied a motion for leave to file a petition for a writ of certiorari (361 U.S. 928). The *Firstamerica* suit was subsequently resolved by entry of a stipulation pursuant to which Firstamerica undertook to divest itself of a newly-formed bank with approximately 67 bank offices and $600,000,000 of deposits.

[8] *United States* v. *Continental Illinois Bank and Trust Co. of Chicago, et al.*, Civ. Action No. 61-C-1441, N.D. Ill.; *United States* v. *Manufacturers Hanover Trust Co.*, Civ. Action No. 61-C-3194, S.D.N.Y. Trial has been completed in the New York case.

[9] *United States* v. *First National Bank and Trust Co. of Lexington, et al.*, Civ. Action No. 1424, E.D. Ky. Trial has been completed in this case.

[10] *United States* v. *Bank Stock Corp. of Milwaukee, et al.*, Civ. Action No. 61-C-54, E.D. Wis.

of competition in this field vital to the preservation of a competitive economy.

The district court dismissed the complaint upon holding that the merger was not subject to the Clayton Act; that the government had failed to show that the four-county area in which defendants maintain offices was an appropriate geographical market; and that, assuming *arguendo* the government's position on these points, the merger would not violate the Clayton Act or the Sherman Act. The government contends that the four-county area is a relevant geographical market, that the merger would violate Section 1 of the Sherman Act, and that it also is subject to and would violate Section 7 of the Clayton Act. These positions are, at the least, substantial and worthy of full presentation to the Court.

1. *The Relevant Geographical Market.*

The government presented to the court below evidence of defendants' position among commercial banks located in the four Pennsylvania counties—Philadelphia, Delaware, Bucks, and Montgomery—in which defendants and other Philadelphia-based banks may legally maintain offices. PNB has offices in all four counties; Girard in all except Bucks. The district court denied the significance of statistics for the four-county area upon the ground that the relevant market was "the greater part of the northeastern United States" in order to include virtually the entire territory "in which PNB and Girard compete". (App. 31a). It is true, of course, that PNB and Girard are direct and very substantial competitors wherever they oper-

ate—be it on the local, regional, national or international level—because they are both engaged in precisely the same business. The significant question for purposes of the antitrust laws, however, is what geographical market or markets are appropriate for measuring the substantiality of the competition to be eliminated between the two banks by the merger.

The Sherman Act proscribes restraint of "any part" of commerce, a term which "has both a geographic and a distributive significance." *Standard Oil Co. v. United States*, 221 U.S. 1, 61. Geographically, the Court has been satisfied in Sherman Act cases with finding sufficient "volume in the area which the alleged restraints affect" (*United States* v. *Columbia Steel Co.*, 334 U.S. 495, 520), or, in similar terms, that the subject of the restraint is "an appreciable segment" of commerce (*United States* v. *Yellow Cab Co.*, 332 U.S. 218, 226).[11] The same approach was adopted by Congress in enacting the present geographical standard in Section 7 of the Clayton Act. As stated in the Senate Report on the 1950 amendment, a "section of the country" may be separately considered so long as it contains an "[a]ppreciable segment of the trade." S. Rep. No. 1775, 81st Cong. 2d Sess., p. 6.

In the present case, the four-county area proposed

[11] The Court has limited the "relevant competitive market" in an acquisition case to eleven states within which the acquired company did business (*United States* v. *Columbia Steel Co.*, 334 U.S. 495, 519-520), and in conspiracy cases, to eight states in which the parties' papers were published and principally circulated (*Farmer's Guide Co.* v. *Prairie Co.*, 293 U.S. 268, 278-279), to four cities for which taxicabs were purchased for use by defendant companies, and to one city in which several defendants operated (*United States* v. *Yellow Cab Co.*, 332 U.S. 218, 226, 229).

by the government was a highly appropriate geographical market for determining the effect of the merger on competition. In their reports and analyses of the merger to the Comptroller of Currency, both the Federal Reserve Board and the Federal Deposit Insurance Corporation regarded the four-county area as a distinct local market appropriate for purposes of analyzing the merger. As the Board stated, "[I]t is in the four-county area where the principal competitive impact of the proposal will fall and not in the out-of-State areas * * *. In all cases involving Philadelphia, Camden, Trenton and Wilmington banks, the [bank] examiners indicate that the primary competition is represented by the banks in the city where the subject institution is located. * * * The principal competitive effects of the proposal will, therefore, be local and not international or national." (Ex. G-161, pp. 1-2.) The banking agencies compared total resources and business of the defendants with those of the other banks with head offices in the four-county area, just as the government did in the court below.

The district court itself found that commercial banking as a whole was the relevant product market or line of commerce (App. 24a-28a). One would expect to find that most of the business of banks, both in terms of total dollar volume and in terms of customers served, is located in the local banking areas in which the banks have their head offices and branches. (See, *e.g.*, Tr. 369, 411, 1500-1501, 2055, 3246-3251; cf. *Transamerica Corp. v. Board of Governors*, 206 F. 2d 163, 167 (C.A. 3)). Small and medium size customers perforce do business in the local banking areas (Tr. 3815-3817); there

is testimony that loans below $1,000,000 normally would not be made outside the four-county area (Tr. 3817). Only in the local banking area does a bank effectively provide many of the required commercial banking services for all its customers, large and small alike (Tr. 882, 2558-2565, 3260, 3547-3549, 3815-3817, 3936). Even PNB and Girard's largest customers have headquarters or substantial business operations which require a variety of commercial banking services in the four-county area (Tr. 2504-2510, 2830-2833). So close is the identity of the four-county area with the major share of the business of the two banks, that neither PNB nor Girard derives any substantial portion of its business from Camden, New Jersey, which is just across the river from Philadelphia.[12] In fact, an official of one of the two largest commercial banks in Camden, with assets of more than $140 million, testified that his ability to compete effectively in the Philadelphia area was adversely affected by the legal restrictions on his locating branch offices there (Tr. 3228, 3249-3251, 3261).[13] Finally, as indicated by the sta-

---

[12] Camden is one county in the ten-county Delaware Valley area proposed as the relevant market by defendants, which includes the four-county area advanced by the United States (Defs. Fdg. 50). Camden and the other five additional counties combined accounted for only about 7% of defendants' commercial and industrial loans, 2% of individual demand deposits, 4% of their demand deposits of partnerships and corporations (Fdgs., Tables 3, 14, 17, pp. 50, 63, 66).

[13] On this point, defendants' arguments in the court below were inconsistent. At the same time as they sought to expand the geographical market to include other areas, defendants contended that branch expansion was vital to their service of suburban areas outside Philadelphia and that existing branches of PNB and Girard a few miles apart are not really competitive with each other (Com-

tistics in the Statement (*supra*, p. 6), most of the business of PNB and Girard originates in the four-county Philadelphia metropolitan area.[14] On the basis of these facts, the four-county area was clearly a relevant geographical market for purposes of the Sherman Act (or a relevant section of the country for purposes of the Clayton Act), and the district court's contrary ruling was plainly erroneous.

2. *Unreasonable Restraint of Trade under the Sherman Act.*

The significance of the present case is that it involves the elimination of substantial and direct competition between the second and third largest commercial banks in the four-county Philadelphia metropolitan area. The direct competition between PNB and Girard is not an incidental effect, involving a small part of their activities, but rather runs throughout the entire range of their respective businesses, including the handling

---

pare Defs. Fdgs. 52, 53, 99, 104, 105 with Defs. Fdg. 127). Moreover, in seeking to show the needs of the Philadelphia area for a larger bank, defendants implicitly assumed that, for certain of the banking needs of businessmen in the area, banks elsewhere are not satisfactory alternatives (Defs. Fdgs. 175-178, 180, 189, 204-205, 207).

[14] Comparable percentages of other companies' activities have been relied upon to determine relevant regional or local markets. *E.g.*, *United States* v. *Bethlehem Steel Corp.*, 168 F. Supp. 576 (S.D.N.Y.); *American Crystal Sugar Co.* v. *Cuban-American Sugar Co.*, 152 F. Supp. 387 (S.D.N.Y.), affirmed, 259 F. 2d 524 (C.A. 2); *Crown Zellerbach Co.* v. *Federal Trade Commission*, 296 F. 2d 800 (C.A. 9). If the court below be correct in defining the market to include virtually all of defendants' business, a single loan by one of the defendants' banks in New York City would apparently require the inclusion in the statistical analysis of all of the loans of the massive New York City banks.

of $1 billion and $650 million in deposits, the making of $500 million and $400 million in loans, and the administration of $400 million and $2.5 billion in trust funds (see the Statement, *supra*, pp. 5-6; Fdgs. 286, 287, 289, 308-316, 321, 337-345, 348, 355-356, 363-372). The Federal Reserve Board pointed out in its report to the Comptroller of Currency (Ex. G-161, pp. 2-3, 10) that the two consolidating banks are strong competitors "essentially * * * engaged in the same type of business * * *. [T]hey are competing for essentially the same types of business and the same types of customers." The merger would eliminate a substantial amount of "existing and potential competition," and would give the new bank "a dominant position * * * strongly adverse to the preservation of effective competition." The district court agreed that the merger would eliminate substantial and direct competition between the two defendant banks (App. 37a; see Fdgs. 320, 332, 336, 347, 351, 358, 360, 373).

(a). The railroad cases.—The closest analogy, in prior decisions of this Court, to the horizontal merger of direct competitors here presented is found in those cases which considered the validity of railroad mergers under the Sherman Act. Three cases involved mergers of transcontinental railroads (*United States* v. *Southern Pacific Railroad Co.*, 259 U.S. 214; *United States* v. *Union Pacific Railroad Co.*, 226 U.S. 61; *Northern Securities Co.* v. *United States*, 193 U.S. 197), and two involved the merger of railroads serving Pennsylvania's anthracite coal fields (*United States* v. *Reading Co.*, 253 U.S. 26; *United States* v. *Lehigh Valley Rail-*

road, 254 U.S. 255). Each merger was struck down on the ground that it eliminated substantial direct competition between the merged companies. As one commentator concluded from these cases: "[T]he unification of control and management of two giant companies doing a substantial proportion of the total business in a field, with a consequent elimination of competition between them, is unlawful notwithstanding that a monopoly is not attained, and notwithstanding further that no predatory methods are employed, and competitors are left unrestrained * * *." Handler, *A Study of the Construction and Enforcement of the Federal Antitrust Laws,* TNEC Monograph No. 38, S. Comm. Print, 76th Cong., 3d Sess., p. 58. In the railroad cases, there was no question but that the merged companies remained subject to vigorous competition by other railroads. In the *Reading* and *Lehigh Valley* cases, for example, the merged companies occupied only one-fifth to one-third of their relatively limited geographical market. See Handler, *supra,* pp. 48-49, 58-59, 66-71. As this Court held in *United States v. Southern Pacific Railroad Co., supra,* 259 U.S. at 230, "Such combinations * * * [are] not the result of normal and natural growth and development" in a competitive economy, and are unreasonable restraints of trade regardless of the continued existence of competition from other firms. Under the authority of these decisions, therefore, the proposed merger in the present case constitutes an unreasonable restraint of trade on the conceded facts.

(*b*). *The Columbia Steel case.*—Even if the proof of the proposed elimination of competition between

the two giant banks were not alone enough to demonstrate a violation of the Sherman Act, the proposed merger is plainly unlawful when judged on the basis of the factors enunciated by this Court in its most recent discussion of the applicability of the antitrust laws to horizontal mergers or acquisitions by competitors, *United States* v. *Columbia Steel Co.*, 334 U.S. 495. The factors to be considered are: dollar volume, although that factor is not "in itself of compelling significance"; "the percentage of business controlled" in the relevant market, the relative effect of which varies "with the setting in which that factor is placed"; "the strength of the remaining competition" both with respect to the competition eliminated between the merged companies and with respect to the competition from other companies; "the probable development of the industry" including the past history of the industry and the relevance of that history for the future development of the industry; and other subsidiary factors (*id.* at 527, 528).

(1). *Dollar volume.*—Although dollar volume is not "in itself of compelling significance" (334 U.S. at 527), it would be substantial in the proposed consolidated bank. The total assets of the consolidated bank would amount to about $1.75 billion; the total deposits would amount to over $1.5 billion; and the total loans would be close to $1 billion (see the Statement, *supra*, pp. 5-6).

(2). *The percentage of the business controlled.*—The proposed consolidation would bring about a marked concentration of commercial banking in the four-

county area. PNB-Girard would have over 35% of all the assets held by commercial banks in the area, over 35% of total deposits, about 35% of total loans, and over 40% of all commercial and industrial loans (see the Statement, *supra*, pp. 6-7 & n. 3, p. 7).

(3). *The strength of the remaining competition.*— In addition to eliminating substantial and direct competition between the two consolidating banks throughout the entire range of their businesses (see *supra*, pp. 19-20), the proposed consolidated bank will alter radically the existing competitive situation among all commercial banks with head offices in the four-county area. Instead of the present situation of two front-running banks of approximately equal size, with smaller competitors of decreasing size, the proposed consolidated bank will be far larger than any of its competitors, being at least 1.5 times the size of its nearest competitor (see the Statement, *supra*, pp. 7-8 & n. 4, p. 8).

The court below glossed over this consequence on the ground that "the vigor of competition" was assured by the continued activities of the other 40 commercial banks in the four-county area.[13] These banks

---

[13] On the basis of statistics concerning commercial banking in other cities in which the leading bank had equal or higher market percentages than the proposed PNB-Girard bank, the district court also found that "no dangerously potential concentration will result from this merger" (App. 35a-36a). But the statistics were presented without analysis or proof in the record concerning the amount of banking business in these other markets, the absolute size of the lending banks, the relative size of their competitors, the existence (or not) of a trend to concentration, or other pertinent facts, such as whether the size of the leading bank is attributable to mergers or internal growth. In any event, the possible existence

were erroneously considered equivalent competitive alternatives to PNB-Girard up to their respective lending limits per borrower (App. 39a). Although there are 27 banks which are legally permitted to lend up to $100,000 to any one borrower (Ex. D-15),[16] many of these banks would quickly deplete their lendable funds if they were to make any substantial number of loans at the limit. The lending limit is fixed by law at 10% of capital and surplus; the funds available for lending are derived primarily from deposits, secondarily from capital and surplus (Tr. 2572, 2613-2615). Thus, of the 27 banks with a $100,000 lending limit, only 7 have total outstanding net loans (and lendable funds)[17] in excess of $100,000,000. Fifteen of the 27 banks have total net loans of less than $25,000,000, 9 have less than $10,000,000, and 1 has less than $700,000 (Ex. D-15). The smaller banks cannot be compared in economic power and influence—and as competitors for $100,000 loans—with the merging banks which together have almost $1 billion in outstanding loans (Govt. Prop. Fdg. 408), and cover the

---

elsewhere of a high degree of concentration, or even an unprosecuted violation of the antitrust laws, could not justify a merger if shown to be unlawful in the present case.

[16] In the four-county Philadelphia area, as the court noted, there would be after the merger 41 banks with lending limits up to $10,000, 27 up to $100,000, 10 up to $500,000, 7 up to $1,000,000, 4 up to $2,500,000 and the new consolidated bank with a lending limit of $15,000,000 (App. 39a).

[17] Defendant Girard's president testified that commercial banks generally lend no more than about 60% of deposits, a ratio considered consistent with sound banking practice (Tr. 2614). The net loans of the Philadelphia area banks shown on Ex. D-15 are close to this ratio and, therefore, approximate the banks' lending capacities.

four-county area with 65 offices (Fdgs. 8, 293-295, 393; Govt. Prop. Fdg. 402; Tr. 884, 2056). Moreover, although large banks in New York and elsewhere solicit business in Philadelphia and although the proposed merged bank might be able, by reason of its increased size, somewhat to enhance competition for large loans on the regional and national markets,[18] these factors cannot outweigh or ameliorate the chief and overriding effect of the transaction, which is the elimination of competition between the defendants and the undue concentration of commercial banking within the four-county area.[19]

---

[18] The record does not support the claim (App. 48a) that defendants must unite to provide adequate service for the benefit of the Philadelphia area. The main aim of the merger is allegedly to provide a higher lending limit; evidently a matter of civic prestige (Tr. 1460, 3189-3190, 3905). The merged bank will be able to lend up to $15,000,000 to any one borrower, in place of PNB's $8,000,000 and Girard's $6,000,000 limits. However, the president of PNB could cite only five borrowers in the Philadelphia area in 1960 who stated that they obtained loans from other cities "due to the inadequate lending limits of Philadelphia National or Girard" (Tr. 1415-1418). As of December 1960, PNB had only two loans outstanding at its present limit; Girard had none (Tr. 1489). PNB had received only five requests in the last five years for loans in excess of its limit, three of which were satisfied by PNB with the cooperation of other banks (Exs. G-146, G-147). Girard had similarly fulfilled its lone request for a line of credit beyond its limit and had experienced no requests for loans of that size (Ex. G-199; Tr. 2842, 3813). And most of defendants' largest customers do not utilize their present lines of credit with defendants (Ex. D-26; Tr. 2854-2878; Ex. D-40; Tr. 2788-2789).

[19] The decision below is hardly supported by the testimony of local bankers that the vigor of competition will continue, or even increase (App. 37a-38a). Some of the witnesses based these conclusory opinions upon the prior experience that after large mergers there is some shift in patronage (Tr. 2314, 2770-2772, 3172-3173, 3274-3275). But this effect offers only a transitory competitive opportunity. To the extent that the bankers expressed their per-

(4). *The probable development of the industry.*— In the present case, the number of competitive units in the market has been marked by a steady decline during the last 15 years, a decline which shows every sign of continuing. The fact cited below (App. 40a), that one commercial bank has been established in the Philadelphia area during this period and has grown to assets of about $15,000,000, deposits of $14,000,000, and loans of $7,500,000 (Ex. D-15), is more than outweighed by the disappearance, between 1947 and 1960, of 66 of 108 independent banks in the area (see the Statement, *supra*, p. 7). The trend towards concentration is clear. The district court plainly erred in refusing to find that there was no real possibility of entry of new competition to replace that which would be eliminated by the merger of defendants.

The unlawful impact of the proposed merger is confirmed by a comparison of the facts in the present case with those of *Columbia Steel*. There, the Court

---

sonal intention to compete energetically in the future (Tr. 3050), the testimony is hardly material.

One of the banker witnesses relied upon below (App. 38a) was Albert T. Mason, president of Liberty Real Estate Bank and Trust Co. in Philadelphia, who stated that small banks such as his did not suffer from previous mergers and would not be disadvantaged by the PNB-Girard consolidation (Tr. 3050-3051). Since the judgment below, an application to merge signed by Mr. Mason and others was filed by Liberty and another small bank in the four-county area, Bridgeport National Bank, with the Federal Deposit Insurance Corp. The banks asserted, as a reason for the merger, that "the aggressiveness of the banking industry has intensified competition so that the smaller banks must combine so as to remain effective in their area" (Application, p. 4-A, on file with F.D.I.C.; cf. Fdgs. 437-438).

sustained the acquisition by United States Steel of the assets of the Consolidated Steel Co., the horizontal effect of which was limited to structural steel fabrication, and held that, on the basis of the factors enumerated (see *supra*, p. 22), the acquisition was not an unreasonable restraint of trade.[20] United States Steel had aggregate sales of $1.5 billion and Consolidated Steel had annual sales of structural steel, which was its only product, of only $20 million. The sales with respect to that portion of structural steel fabrication as to which the two companies were in direct competition, however, represented only a small portion of the annual sales figures. (334 U.S. at 500, 528-529.) As to the percentage of business controlled, the government offered evidence to indicate that, within the purported relevant market of eleven western states (see 334 U.S. at 514), "United States Steel could be expected in the future to sell 13% of the total of structural steel products in the Consolidated trade area and that Consolidated could be expected to sell 11%" (*id.* at 529). The combined total would therefore be only 24% of the business controlled in the market. The Court raised serious questions about the validity of these figures, because of the doubtful, speculative nature of the alleged horizontal competition between the two companies with respect to structural steel

[20] The Court's opinion was largely devoted to the questions raised by the alleged effects of the vertical integration which actually motivated the asset acquisition. United States Steel purchased Consolidated's assets as a market for the ingot output of a rolled steel plant at Geneva, Utah, which it had previously acquired from the War Assets Administration; the latter sale had been approved by the Attorney General as not violating the antitrust laws (334 U.S. at 503-507).

fabrication, but made the "doubtful assumption" of their accuracy for purposes of discussion (*ibid.*). Even on the basis of these figures, however, the Court held that there was no unreasonable restraint, in view of "the present unusual conditions of the western steel industry" and its prospective development (*ibid.*; see *id.* at 512-516, 529). These "unusual conditions" in the industry—which included changes in the industry structure resulting from World War II and a new basic freight rate pattern—tended to indicate an expanding number of market participants and to reduce the significance of previous or existing market positions (334 U.S. at 514, 529-530). The contrast of the factual setting of the present case with that of *Columbia Steel* is obvious and indicates that under the tests this Court has laid down the proposed merger here must be found to create an unreasonable restraint of trade.

3. *The Applicability of Section 7 of the Clayton Act.*

(*a*). *The effect of the merger.*—If the government be correct in its contention that the proposed merger is a combination in unreasonable restraint of trade, in violation of Section 1 of the Sherman Act, then the same analysis is sufficient, *a fortiori*, to establish that the effect of the proposed merger may "be substantially to lessen competition" or "to tend to create a monopoly," in violation of Section 7 of the Clayton Act. Moreover, even if a violation of the Sherman Act were not established, the market analysis and the appraisal of the effect of the merger on competition shows that the court below plainly erred in hold-

ing that the proposed merger might not substantially lessen competition or tend to create a monopoly.

Congress clearly intended that a merger or consolidation would violate Section 7 of the Clayton Act well before it could violate the Sherman Act. See S. Rep. No. 1775, 81st Cong., 2d Sess., pp. 4-5. Once a merger eliminates "in whole or in material part * * * the competitive activity of an enterprise which has been a substantial factor in competition" (H. Rep. No. 1191, 81st Cong., 1st Sess., p. 8), a violation of Section 7 occurs, providing the other criteria of the Section are met (see, *e.g., Crown Zellerbach Corp.* v. *Federal Trade Commission*, 296 F. 2d 800 (C.A. 9); *United States* v. *Bethlehem Steel Corp.*, 168 F. Supp. 576 (S.D.N.Y.); *United States* v. *Koppers Co.*, 1962 Trade Cases § 70,194 (W.D. Pa.)). Since the proposed merger will eliminate substantial and direct competition between PNB and Girard, a basic criterion for establishing a violation of Section 7 has been satisfied.

(*b*). *The scope of Section 7.*—Another substantial question is raised by the court's refusal to find that the proposed merger in the present case satisfied the other criteria of Section 7. Section 7 prohibits acquisitions of "the whole or any part of the stock or other share capital" or of "the whole or any part of the assets of another corporation," if the acquisitions have the prescribed anticompetitive consequences. Although all integrate mergers or consolidations cannot be described literally in terms of simple acquisitions of stock or assets, the fact is that today there can be no question that Section 7, under either its "stock" or

"assets" clause, covers all types of mergers and consolidations as well as acquisitions. In *United States v. du Pont & Co.*, 353 U.S. 586, 590, this Court, quoting from H. Rep. No. 1191, 81st Cong., 1st Sess., p. 11, pointed out that "the 1950 amendment [to Section 7 adding the "assets" clause] was purposed '. . . to *make it clear* that the bill applies to all types of mergers and acquisitions, vertical and conglomerate as well as horizontal'" (emphasis by the Court. Although the Court in this quotation was concerned with making it clear that even before the 1950 amendment Section 7 had applied to vertical as well as horizontal acquisitions (see 353 U.S. at 590), it is plain that the Court also assumed that Section 7 applied to mergers as well as to acquisitions and therefore that the 1950 amendment had put to rest the dictum in *Arrow-Hart & Hegeman Elec. Co. v. Federal Trade Commission*, 291 U.S. 587, 595, that Section 7 did "not forbid * * * the merger of corporations pursuant to state laws." This previous exclusion of mergers from the coverage of Section 7 was an improperly restricted reading of the reference to acquisitions in Section 7.

In Section 7, the differentiation between the acquisitions of "stock" and "assets" becomes important with respect to bank mergers because only the "stock" acquisition clause is applicable to bank mergers. The "stock" clause applies to acquisitions by "any corporation engaged in commerce," whereas the "assets" clause applies only to acquisitions by corporations "subject to the jurisdiction of the Federal Trade Commission," from which banks are excluded by Section 11 of the Clayton Act, 15 U.S.C. 21 (cf. Section

5(a) of the Federal Trade Commission Act, 15 U.S.C. 45(a)).

The court below held that the "acquisition" in the present case was one of "assets" and was therefore outside the scope of Section 7 (App. 17a-21a). But an assets acquisition refers to the typical purchase of property, such as the purchase of Consolidated's assets by United States Steel in *United States* v. *Columbia Steel Co., supra.* A merger or consolidation of going concerns, on the other hand, may be viewed as combining two distinct and successive acquisitions: (1) an acquisition by the newly consolidated company of all of the stock of the merging companies for which stock of the consolidated company is issued; and (2) an acquisition of assets, in which the subsidiaries are absorbed into the parent consolidated company. In the statutory consolidation proposed between PNB and Girard, under the express terms of 12 U.S.C. (Supp. II) 215(e), "[t]he corporate existence of each of the consolidating banks * * * shall be merged into and continued in the consolidated national banking association and such consolidated national banking association shall be deemed to be the same corporation as each bank or banking association participating in the consolidation." Under the agreement of consolidation, PNB and Girard are to be consolidated under the PNB charter, and the consolidated bank is to "be deemed the same corporation as each of the Consolidating Banks * * *." All property rights, franchises and interests of the two banks are to be vested in the consolidated bank, which in turn is to be responsible for all of the liabilities of the two

banks. (See Secs. 1 and 5 of the agreement; the Statement, *supra*, pp. 8-9.) Although, under the Act and agreement of consolidation, the two "acquisitions" of stock and assets occur in a single step, the transaction nevertheless must be broken down into its component elements and analyzed as separate acquisitions for purposes of applying Section 7. A bank merger therefore may be characterized as involving both an acquisition of "assets", which is outside the scope of Section 7, and an acquisition of "stock", which is within the scope of Section 7. Since a vital element of the bank merger would be an acquisition of stock, the proposed merger is clearly within the scope of Section 7.

Under the original Section 7 (which covered only stock acquisitions), this Court held in *Arrow-Hart & Hegeman Elec. Co.* v. *Federal Trade Commission*, *supra*, that, if an illegal acquisition of stock were followed by a merger of assets, the Commission would no longer have power to grant relief. The holding of the case, however, rested explicitly upon the statutory limitations applicable to the Commission (see 291 U.S. at 598-599). *Arrow-Hart* would hardly have relevance in the present case, for the powers of a court of equity are not circumscribed as are the powers of the Federal Trade Commission. Indeed, the Court in *Arrow-Hart* itself stated (291 U.S. at 599) that "if any remedy for such violation is afforded, a court and not the Federal Trade Commission is the appropriate forum." See the dissenting opinion of Mr. Justice Stone in *Arrow-Hart*, 291 U.S. at 608; *Northern Securities Co.* v. *United States*, 193 U.S. 197, 356-358. *Arrow-Hart* thus does not stand in the way of the district court granting

effective relief against the proposed merger in the present case.[21]

CONCLUSION

For the foregoing reasons, the questions presented by this appeal are substantial and of public importance in the enforcement of the antitrust laws. Probable jurisdiction should be noted.

Respectfully submitted,

ARCHIBALD COX,
Solicitor General.

LEE LOEVINGER,
Assistant Attorney General.

RICHARD J. MEDALIE,
Assistant to the Solicitor General.

P. JAY FLOCKEN,
Attorneys.

MARCH 1962.

[21] Even if the merger were not directly subject to Section 7, the Section nevertheless has relevance to this case. The Court has stated that the policy of Section 7 illuminates the Sherman Act and should be taken into consideration in a Sherman Act case. *United States* v. *Columbia Steel Co.*, *supra*, 334 U.S. at 507, n. 7; *Times-Picayune* v. *United States*, 345 U.S. 594, 610-611. The Sherman Act's standard of proof has been said to be "more stringent" in the case of tying agreements (*Times-Picayune*, *supra*). For mergers, however, the Court has noted only that the Sherman Act standard "differs somewhat from the specific language" of the Clayton Act (*Columbia Steel*, *supra*, 334 U.S. at 522, n. 19). At the least, therefore, mergers of substantial competitors should not be favored by the Sherman Act over loose combinations or agreements.

APPENDIX

IN THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA

Civil Action No. 29287

UNITED STATES OF AMERICA, PLAINTIFF,

v.

THE PHILADELPHIA NATIONAL BANK AND GIRARD TRUST CORN EXCHANGE BANK, DEFENDANTS

* * * * *

OPINION

CLARY, CH. J. January 15, 1962.

This is a civil action instituted under Section 4 of the Act of Congress of July 2, 1890, as amended, 15 U.S.C. Section 4, (commonly known and hereinafter referred to as the "Sherman Antitrust Act"), and Section 15 of the Act of Congress of October 15, 1914, as amended, 15 U.S.C. Section 25, (commonly referred to and hereinafter designated as the "Clayton Antitrust Act"), in which the United States (hereinafter referred to as "government" or "plaintiff") seeks an injunction to restrain the defendants, The Philadelphia National Bank (hereinafter referred to as "PNB") and Girard Trust Corn Exchange Bank (hereinafter referred to as "Girard"), from carrying out an agreement of consolidation. This agreement of consolidation was drawn up after the passage of Public Law 86-463, (commonly referred to as "The Bank Merger Act of 1960"), amending 74 Stat. 129, approved May

13, 1960, found at 12 U.S.C. Section 1828(c), and is subject to the provisions thereof. Plaintiff herein alleges that the proposed consolidation violates Section 1 of the Sherman Antitrust Act, as amended, 15 U.S.C. Section 1, and Section 7 of the Clayton Antitrust Act, as further amended by the Act of Congress of December 29, 1950, 15 U.S.C. Section 18, (commonly known as "The Celler-Kefauver Anti-Merger Act").

The proposed merger sought to be enjoined was approved by the Directors of the banks involved on November 15, 1960, and by the Comptroller of the Currency on February 24, 1961. This action was instituted on February 25, 1961.

Generally, the complaint alleges that commercial banking and several of its integral parts comprise interstate commerce; that commercial banking with its integral parts fills an essential and unique role in the nation's economy with a combination of services unduplicated by other financial institutions; that existing and potential competition in commercial banking in the Philadelphia area would be substantially and unreasonably lessened; that the merger would substantially and unreasonably increase concentration in banking in the Philadelphia area and that existing and potential competition in the commerce and industry served by commercial banks in the Philadelphia area would be substantially and unreasonably lessened. Parenthetically it may be noted at the outset that the last of these averments has not been seriously presented by the plaintiff and, for all practical purposes, has been abandoned.

The net effect of the above, the plaintiff contends, is a violation of both Section 1 of the Sherman Act and Section 7 of the Clayton Act. The plaintiff contends further that competition in commercial banking is absolutely vital and necessary to the preservation of the

financial structure and security of the nation; that undue concentration of banking powers would have the effect of increasing costs and interest rates both to depositors and borrowers; would result in a decrease in the credit facilities available to the general public and, in effect, would destroy the very foundation of the banking system of the United States which, according to the Government's witnesses, rests entirely upon a number of independently-owned banks serving the community, which system they felt strengthened competition, and a merger such as this would tend to destroy it.

Initially, it would help to review, in extremely brief outline, what Congress has done in this field. The Sherman Act, supra, enacted in 1890, was designed to prevent combinations in restraint of trade or commerce among the several states or with foreign nations. That this was an exposition of the common law doctrine is revealed by the decision in *United States v. American Tobacco Company*, 221 U. S. 106 (1911) at pages 179-180 where the Supreme Court of the United States declared:

> "'Applying the rule of reason to the construction of the statue, it was held in the Standard Oil Case that, as the words 'restraint of trade' at common law and in the law of this country at the time of the adoption of the anti-trust act only embraced acts or contracts or agreements or combinations which operated to the prejudice of the public interests by unduly restricting competition, or unduly obstructing the due course of trade, or which, either because of their inherent nature or effect, or because of the evident purpose of the acts, etc., injuriously restrained trade, that the words as used in the statute were designed to have and did have

but a like significance . . . the words 'restraint of trade' should be given a meaning which would not destroy the individual right to contract, and render difficult, if not impossible, any movement of trade in the channels of interstate commerce,—the free movement of which it was the purpose of the statute to protect."

Citing Standard Oil Co. v. U.S. 221 U. S. 1 (1911)

It will therefore be seen that the Supreme Court judged the key factor and purpose of the Sherman Antitrust law to be the perpetuation of and protection of free competition. An examination of both the Clayton Act and the Federal Trade Commission Act, both passed in the year 1914, and the case law decided thereunder, again stresses the principle of law that competition should be encouraged as a national policy, and it is the destruction of this free competition which is proscribed.

The Miller-Tydings Amendment to the Clayton Act and the Robinson-Patman Amendment were both designed to insure free and fair competition. The Celler-Kefauver Amendment of 1950 was designed to prevent asset acquisitions thereby plugging a loophole in the Clayton Act which previously prevented stock acquisition only, and did not cover the area in which asset acquisitions might tend to destroy competition. The legislative history of this latter Act clearly indicates the intent of the Congress to preserve competition as defined by the Supreme Court.

Since competition and the preservation of competition permeates each of the aforementioned Acts and is the common bond between each of them, it would appear that 71 years after the passage of the first Antitrust law, the Court should have (but does not) a clear legal defi-

nition of competition as used in each of the Acts. Congress has given the Court at least one idea of what it means in the use of the word when it refers to "vigorous" competition. What then is the real definition of competition and what are the standards of competition required by these Acts? The Webster definition reads as follows:

> "Com. & Econ. The effort of two or more parties, acting independently, to secure the custom of a third party by the offer of the most favorable terms; also, the relations between different buyers or different sellers which result from this effort."

In *United States* v. *Aluminum Company of America*, 91 Fed. Supp. 333, at 355 (S.D. N.Y. 1950), Chief Judge Knox defined competition as follows:

> "Commercial competition, theoretically, is the independent endeavor of two or more persons or organizations within the realm of a chosen market place, to obtain the business patronage of others by means of various appeals, including the offer of more attractive terms or superior merchandise."

It seems to the Court that the Congress, by the use of the word "competition", intended to preserve free and open markets wherein the rivalry of the commercial firms, in the same line of endeavor, for the patronage of the common customer, would be demonstrated by a business atmosphere where free purchasers and free sellers, under no obligation to buy, and under no obligation to sell, would enter into contracts of purchase and sales (or service contracts) because of the actual inducements offered, such as quality of product, terms, delivery, and the many other factors which make for good business relations, having in mind the peculiar

situations, facts and circumstances which govern the particular transactions between individuals or organizations.

It is also apparent that in any antitrust action, including the instant one, a Judge called upon to decide the case must, of necessity, take the facts that are presented to him and determine on those peculiar facts whether the particular circumstances involved will, or will not, destroy the free competition which the Congress intended to preserve, and with particular scrutiny of the industry or part thereof charged with violations.

The Government here has brought an action—the first of its kind—to prevent the merger of two strong Philadelphia banks, and on the ground that this merger will (1) violate the Sherman Act by restraining trade, and (2) violate the Clayton Act by lessening and/or destroying competition and tending toward a monopoly. The Court believes that the Government's general theory of the case should be set out in brief, broad outline before coming to the specifics.

The Government's case was predicated upon the premise that the banks involved were legally restricted to having offices in geographic limits. Starting with that assumption, the Government introduced a wealth of statistical data, the accuracy of which has not been questioned, which would show that a very large percentage of the deposits and loans originated in the restricted geographical area. Based strictly upon this premise, and applying the principles heretofore enunciated in industrial cases, the Government argues that these percentages are all persuasive, show a high degree of concentration of the market involved, and that it is therefore the duty of the Court to prevent this clear, apparent restraint of trade, destruction of,

or restriction of competition, and tendency to monopoly by prohibiting the merger.

The Court accepts the statistics introduced as showing exactly what they demonstrate on the figures used, but, as will be pointed out later when discussing the specifics, refuses to accept the conclusions which the Government asks the Court to draw.

In support of its contention that this merger is illegal, the Government attempted to show by the testimony of two university professors that the merger would have a profound adverse effect upon the banking system of this area, actually restrict credit, and permit price fixing for banking services. This attempt was far from successful. The professors had individual theories of the effect of the merger on the monetary system of the United States and of this area, which were completely destroyed on cross-examination, particularly as relating to the Philadelphia situation. The Government also attempted to establish, by opinion testimony of small town bankers, that the contemplated merger would adversely affect not only the banking situation in Philadelphia, but generally throughout the country, including their own small towns. Their testimony was practically a rehash of the testimony they gave before both the House and Senate Committees considering the Bank Merger Act of 1960. There they strongly urged the Congress of the United States to forbid further bank mergers and to maintain the status quo of the banking system of the United States. They attempted to have Congress limit prospective mergers to the very narrow situations where economic necessity would make a merger absolutely imperative. For example, they conceded that where a bank was on the verge of insolvency, a merger should be permitted with a strong solvent bank for the protection

of depositors and the general public. They also agreed that where ineffectual management was demonstrated, again it would be in the public interest to merge the bank with a strong progressive bank, again for protection of depositors and the public. With these two and other minor exceptions, not necessary to outline here, they fought vigorously to have the Congress absolutely forbid all other mergers. This the Congress refused to do, and, in the opinion of this Court, properly so.

Commercial banking, despite the attempt of the Government in this case to have the Court consider it an ordinary line of commercial endeavor, comparable to the ordinary industrial organizations, is a specialized branch of what the Court chooses to term the financial industry. It is completely regulated. It may not, as an industrial plant might, establish a branch of operations where it pleases. By virtue of both state and federal authority, it must keep its assets liquid, as will be hereinafter discussed. It may charge for its principal services (lending of money) a maximum prescribed by law. It may not pay interest on demand deposits and is limited by law to the amounts which it may pay for savings or time deposits. It may not go out and buy raw materials and manufacture products and attempt to extend its market. Its stock in trade is money and the only way that it can generate its stock in trade—money—is to create demand deposits which it may lend to individuals, corporations or organizations. It is the commercial bank, even though strictly regulated, which comprises the backbone of the montetary system of the United States. To place it in and consider it as part of the commercial and industrial field, as contrasted with the financial, would be to ignore the realities of the situation.

Both the Government and the defendants have, in

support of their respective contentions, cited the only antitrust case law available and all such cases were decided under the Sherman and subsequent Acts. All involve only commercial and industrial organizations. While the Court recognizes the validity of the broad principles of law therein enunciated, it certainly does not follow that those principles should be applied with the same force and effect to a regulated industry as to one in the so-called "free enterprise" field. The Congress of the United States has, in fact, in the industrial and commercial field, usually exempted regulated industries from the application of the antitrust law and in the public interest.

It is significant to note that in the Bank Merger Act, the Congress of the United States has included as one of the controlling elements, and an important one, for consideration in the determination of Governmental approval of bank mergers, that same public interest. This Court does not believe, as the Government would have it, that this was a mere passing reference without practical significance and actually completely irrelevant to a decision of this case, but, on the contrary, feels that the inclusion of this public interest concept is an important element in the Congressional approach to monetary regulation.

The only question involved in this case is—Will this proposed merger of two Philadelphia banks, in the City and County of Philadelphia, Commonwealth of Pennsylvania, substantially lessen competition, tend toward monopoly, and or restrain trade and commerce, in violation of the Clayton and Sherman Acts?

Coming now to the specifics of this case and expanding upon the allegations of the complaint, it avers, inter alia, that commercial banks fill an essential and unique role in the nation's economy with a combination of services unduplicated by other financial institutions;

that commercial banking in Philadelphia and the surrounding metropolitan area is heavily concentrated in a few banks; that PNB and Girard compete with each other, and with other banks in the Philadelphia area, in the performance of commercial banking functions; that as of June 30, 1960, PNB accounted for approximately 22% and Girard for approximately 15% of the total deposits in Philadelphia commercial banks; and, that as a result of the proposed merger PNB would become the largest commercial bank in the Philadelphia area and would be approximately 50% larger than its closest competitor.

Further, it is charged that defendants have been engaged in an unlawful combination in unreasonable restraint of trade and commerce in commercial banking in violation of Section 1 of the Sherman Act, and that the effect of the merger may be substantially to lessen competition, or tend to create a monopoly in violation of Section 7 of the Clayton Act.

PNB is a banking association, engaged in interstate commerce, organized under the laws of the United States, having its principal place of business at Philadelphia, Pennsylvania. Girard is a banking association, engaged in interstate commerce, organized under the laws of the Commonwealth of Pennsylvania, having its principal place of business at Philadelphia, Pennsylvania.

On November 15, 1960 the Boards of Directors of PNB and Girard approved a proposed merger of the two banks. On the same day, an application for approval of the merger was filed with the Comptroller of the Currency in accordance with the provisions of the 1960 amendment to the Federal Deposit Insurance Corporation Act, 12 U.S.C. Section 1828(c), commonly known as the Bank Merger Act.

On December 20, 1960, the two Boards approved a

written agreement of consolidation to be effected in accordance with the provisions of the national banking statutes, 12 U.S.C. Section 215. On February 24, 1961, the Comptroller of the Currency approved the proposed merger. He did so despite the fact that in the reports submitted to the Comptroller by the Federal Reserve Board, the Federal Deposit Insurance Corporation and the Attorney General, as was required by the Bank Merger Act, both the Attorney General and the Federal Reserve Board concluded that the merger would result in a substantial lessening of competition and a tendency toward monopoly, and the Federal Deposit Insurance Corporation concluded that the merger would be adverse as to Philadelphia and the immediate suburbs, but not adverse in the regional, national, and international fields of competition.

The next day the Department of Justice filed the complaint in this action. On May 9, 1961, meetings of the shareholders of the two banks were held and the agreement of consolidation was approved. The trial of this case began on June 5, 1961, without a jury, and was concluded on August 3, 1961.

PNB was chartered on October 20, 1864 under an Act of Congress of June 3, 1864. In 1926 it merged with Girard National Bank, and in 1928 it merged with Franklin-Fourth Street National Bank. Until 1951 PNB engaged in what has been termed a "wholesale" banking business, at which time it was decided to enter the "retail" banking and trust fields. Since 1951 PNB has acquired 9 additional banks. As of March 10, 1961, PNB conducted a general commercial banking business through 27 offices, 10 of which are located in Philadelphia County, 5 in Delaware County, 5 in Bucks County, and 7 in Montgomery County. As of June 30, 1960, PNB had total assets of $1,064,335,000, total deposits of $924,495,000, and total loans of $523,612,316 of

which approximately 57% in dollar amount were in commercial and industrial loans.

Girard was chartered as a state bank on March 17, 1836 by the Pennsylvania legislature. It was primarily engaged in the trust business and accompanying banking services until 1940 at which time efforts were begun to develop commercial business and consumer credit loans. Until 1950 Girard had only one office. In the past 10 years it has engaged in 6 mergers. Girard now conducts a general commercial banking business through 39 offices, of which 21 are located in Philadelphia, 12 in Delaware County, and 6 in Montgomery County. As of June 30, 1960 Girard had total net assets of $740,920,000, total net deposits of $650,790,000 and total net loans of $399,362,000, of which approximately 49% in dollar amount were in the commercial and industrial category.

With this brief introduction it now becomes necessary, before discussing in detail the factual questions presented and the law applicable thereto, to decide two purely legal questions which have been raised, one relating to the Bank Merger Act, the other to the applicability of the Clayton Act to this action.

Bank Merger Act of 1960

The defendants contend that the approval of the merger by the Comptroller of the Currency is the final and exclusive determination of its legality and that the Bank Merger Act of 1960 precludes a review of the proposed merger under the antitrust laws. 12 U.S.C. Section 1828(c) reads in relevant part:

> "No insured bank shall merge or consolidate with any other insured bank or, either directly or indirectly, acquire the assets of, or assume liability to pay any deposits made in, any other insured

bank without the prior written consent (i) of the Comptroller of the Currency if the acquiring, assuming, or resulting bank is to be a national bank or a District bank, . . . In granting or withholding consent under this subsection, the Comptroller, . . . shall consider the financial history and condition of each of the banks involved, the adequacy of its capital structure, its future earnings prospects, the general character of its management, the convenience and needs of the community to be served, and whether or not its corporate powers are consistent with the purposes of this chapter. In the case of a merger, consolidation, acquisition of assets, or assumption of liabilities, the appropriate agency shall also take into consideration the effect of the transaction on competition (including any tendency toward monopoly), and shall not approve the transaction unless, after considering all of such factors, it finds the transaction to be in the public interest."

Defendants claim that the above statute makes it clear that it was the intent of Congress that the Comptroller test the validity of bank mergers by a *public interest* standard which is broader than and essentially different from an exclusively antitrust standard. Since Congress decided to apply antitrust policies to such mergers only to the limited and subordinate extent of being a single factor for consideration, it is argued, it must follow that the practical implementation of this congressional decision necessarily precludes an antitrust action to prevent a merger which has been approved by the executive agency charged with applying the public interest standard in determining whether approval should be given.

In support of this argument, it is submitted that the legislative history of the Bank Merger Act (herein-

after referred to as the "Act"), emphasizes the fact that the competitive factors are not to be controlling in the public interest determination to be made by the Comptroller. For example, at page 24 of the *Senate Report, Senate Report No. 196,* 86th Cong., 1st Sess. on S. 1062 (1959), the following statement appears:

> "Under S. 1062 the competitive factors involved in the merger are only one element of several to be considered in passing on the application. The committee wants to make crystal clear its intention that the various banking factors in any particular case may be held to outweigh the competitive factors, and that the competitive factors, however favorable or unfavorable, are not, in and of themselves, controlling on the decision."

And, in the House Report at pages 9 and 10, *House Report No. 1416,* 86th Cong. 2d Sess., (1960), this statements appears:

> "Because banking is a licensed and strictly supervised industry that offers problems acutely different from other types of business, the bill vests the ultimate authority to pass on mergers in the Federal bank supervisory agencies, which have a thorough knowledge of the banks, their personnel, and their types of business."

It is true that one can find statements in the legislative history of the Act which, when read alone, indicate that Congress intended to preclude the application of the antitrust laws to bank mergers. It is most difficult, however, to accept defendants' contention when faced with unequivocal statements to the contrary in the reports of both the Senate and the House. This statement appears at page 9 of the House Report:

> "S. 1062 would not in any way affect the applicability of the Sherman Act or the Clayton Act to bank mergers."

And, at page 3 of the Senate Report:

> "S. 1062 would not affect in any way the applicability of the Sherman Act to bank mergers and consolidations."

These statements cannot possibly be reconciled with defendants' interpretation of the legislative intent of Congress.

In support of their position, the defendants place a great deal of weight on the *public interest*, as opposed to the antitrust standard written into the Act. Why, they ask, would Congress arm the Comptroller with such a comprehensive standard if it intended that the Department of Justice could supersede his determination by a mere showing of anti-competitive effects? This argument of the defendants, while persuasive, does not convince the Court that it should enunciate the rule of law requested that public interest is the controlling factor in any particular merger. There is no doubt that the public interest factor, while not controlling, does, in this type of antitrust litigation, play more than a casual or secondary role, particularly where it involves a highly regulated field. The Court cannot conclude that merely because a public interest standard was written in the statute as one of the factors to be considered, that a Court is rendered incompetent to review the action of the individual or department charged with the administration of the Act. Had Congress so intended, it certainly would have been specifically set out and in plain terms in the language of the statute. The Court does not find that intendment here.

Defendants also press the argument on another

ground as well. They say that Congress intended to exclude the antitrust laws because the Act contains no provision such as is found in Section 11 of the Bank Holding Company Act of 1956, 12 U.S.C. Section 1841 et seq., which explicitly preserves the application of the antitrust laws to the subject matter of the statute. It is pointed out that Congressman Celler proposed specific language for such an amendment in the House hearings on the bill, but nevertheless it was not included in the amendment by the House of Senate 1062 as previously passed by the Senate. The following statement, however, clearly indicates that Congressman Celler did not consider that the antitrust laws would be excluded by the failure to insert such a provision:

> "While such a provision would not add to the bill from a substantive standpoint, it would avoid needless controversy and possible litigation involving the contention that the strictness of the Sherman and Clayton Acts had been nullified by the provisions of the pending bill." Hearings before the Subcommittee No. 2 of the Committee on Banking and Currency, H.R., 86th Cong., 2d Sess. on S. 1062 (1960), pages 131 and 132.

Moreover, the Court finds the antithetical argument proffered by the plaintiff equally, if not more persuasive, than that of the defendants. The Government argues that a creation of an exemption from the antitrust laws requires clear and explicit language in the exempting statute such as is found in Section 5 (11) of the Interstate Commerce Act, 49 U.S.C. Section 5(11).

In light of this difference of opinion, the Court is constrained to return to the statements made in both the Senate and House reports concerning the applicability of the Clayton and Sherman Acts. It is the opinion of

this Court that defendants have failed in their attempt to nullify the plain meaning of these words. They are much too explicit to be ignored or explained away.

Applicability of Section 7 of Clayton Act

The Celler-Kefauver Anti-Merger Act, 15 U.S.C. Section 18, reads in relevant part:

> "No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly."

The Celler-Kefauver amendment was enacted in 1950 as the original Section 7 proved ineffective in preventing mergers, primarily because of the failure of the statute to include asset as well as stock acquisitions. Because banks are exempted from the jurisdiction of the Federal Trade Commission, under the provisions of the Federal Trade Commission Act, 15 U.S.C. Section 45(a), the Celler-Kefauver amendment can only apply if the bank merger is consummated through a stock acquisition. Therefore, if the Clayton Act is to apply at all to the merger presently under consideration, the plaintiff must show that the proposed consolidation of the defendants involves a stock acquisition.

Before considering the argument advanced by the plaintiff with respect to this question, it is necessary, so that the transaction can be placed in the proper perspective, to set forth certain pertinent provisions

of the agreement of consolidation entered into by the defendant banks:

Section 1

"Girard and Philadelphia National (the 'Consolidating Banks') shall be consolidated pursuant to the provisions of the aforesaid statute,[1] under the charter of the Philadelphia National Bank, which shall continue after the effective date of the consolidation as defined below."

Section 5

"The corporate existence of Girard shall be merged into and continued in Philadelphia National, which shall continue in existence as the Association, and the Association shall be deemed to be the same corporation as each of the Consolidating Banks. All rights, franchises, and interests of each bank in, and to every type of property and choses in action, including those held by it as fiduciary, as they exist at the Effective Date shall be vested in the Association without any conveyance or transfer; and the Association shall be responsible for all of the liabilities of every kind and description, including liabilities arising out of the operation of the Trust Department, of each bank existing as of the Effective Date."

"Girard shall contribute to the Association acceptable assets having a book value, over and above its liability to its creditors, of at least $74,059,392 . . ."

"At the Effective Date Philadelphia National shall have on hand acceptable assets having a book value, over and above its liability to its creditors, of at least $93,306,684 . . ."

[1] 12 U.S.C. Section 215.

Section 6

"Upon the statutory consolidation becoming effective: . . . (i) each holder of an outstanding certificate representing shares of Philadelphia National stock shall retain his certificate, which shall automatically remain a certificate representing shares of stock in the Association, . . . and (ii) each holder of an outstanding certificate representing shares of Girard stock shall surrender the same to the Association promptly after the Effective Date and receive in exchange therefor certificates representing the full number of whole shares of stock in the Association to which such shares of stock in Girard shall have been converted; . . ."

The plaintiff contends that under the provisions of Section 6 of the agreement, PNB shall acquire shares of Girard stock which shall be converted into shares of stock in the Association. It is argued that as a result of the merger, the Girard shareholders would give up certain rights (e. g., the right to have a voice in its management, the right to share in its profits, and the right to receive and divide its total capital less debt upon liquidation) to PNB and receive in exchange an equitable ownership in the very different property of PNB. From this it is concluded that the merger would be accomplished by a stock acquisition on the part of PNB in violation of the Celler-Kefauver amendment to Section 7 of the Clayton Act. The Court cannot agree with the plaintiff's conclusion that the transaction here involved is a stock acquisition falling within the scope of the statute.

Plaintiff has misinterpreted the terms of the agreement. Under the provisions of Section 5, the corporate existence of Girard is being merged with that of PNB

to form an Association, each bank contributing all its assets. It is true that the Association being created will continue under the national bank charter already held by PNB. However, this in no way alters the fact that the corporate character of PNB, as it is today, will cease to exist. PNB might be designated the "surviving bank" but it nevertheless survives as a vastly different entity. PNB is acquiring nothing. Rather, the two banks are creating a national banking association by the consolidation of their assets. Section 6 merely outlines the procedures to be followed with respect to the shareholder's evidence of ownership in the Association once the consolidation becomes a reality. The Association itself is exchanging the certificates representing shares of Girard stock for certificates representing shares of stock in the Association. The entire transaction is patterned in conformity with the applicable federal statute relating to bank consolidations and mergers of assets. The fact that certificates representing shares of stock are exchanged for new ones is merely incidental to the transaction, and in no way affects or alters its character.

As defendants point up in their brief, the proposed merger differs from a stock acquisition in several ways under the provisions of the applicable federal statute. 12 U.S.C. Section 215, which must be adhered to in carrying out the consolidation, provides that it may be effected upon the affirmative vote of at least two-thirds of the capital stock outstanding. In a stock acquisition, there would be no power in Girard, or any group of shareholders, to compel any shareholder to sell his stock. Subsections (b), (c) and (d) of Section 215 provide for the right of a dissenting shareholder to receive the appraised value of his shares in cash; he would not have any comparable

right in an acquisition of stock. Subsection (e) of the same statute provides that all of the assets of the individual banks "shall be transferred to and vested in the consolidated national banking association by virtue of the consolidation without any deed or other transfer." which again differs from the procedure with respect to an acquisition of stock.

Moreover, the House Committee on Banking and Currency, when reporting on the Bank Merger Act of 1960, recognized the very problem with which we are confronted here:

> "Section 7 of the Clayton Act prohibits acquisitions of bank stock 'where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monoply.' Because Section 7 is limited, insofar as banks are concerned, to cases where a merger is accomplished through acquisition of stock, and because bank mergers are accomplished by asset acquisitions rather than stock acquisitions, the act offers 'little help' in the words of Hon. Robert A. Bicks, acting head of the Antitrust Division, in controlling bank mergers." House Report No. 1416, 86th Cong., 2d Sess., (1960), p. 9.

This Court is of the opinion that the Celler-Kefauver Anti-Merger Act of 1950 does not apply to a bank merger of this nature. Any extension of the statute is a function peculiar to the Congress of the United States.

However, it should be noted here that because it is essential to the parties that a final determination of this matter be reached in as short a period of time as is possible, this Court will proceed on the assumption that the Clayton Act is applicable in all respects.

Commercial Banking

Before discussing the questions involved with respect to the Clayton and Sherman Acts, it is necessary to point up the principal characteristics and functions of a commercial bank.

A "commercial bank," as distinguished from other bank and non-bank financial institutions, is an institution authorized to receive both demand and time deposits, to make loans of various types, to engage in trust services and other fiduciary functions, to issue letters of credit, to accept and pay drafts, to rent safety deposit boxes, and to engage in many similar activities. Commercial banks are the only institutions authorized to receive demand deposits. "Demand deposits" are funds accepted by a bank which are subject to immediate withdrawal. They represent the largest element in the money supply of the United States. No interest is paid on demand deposits, as is the case with time and savings deposits.

Commercial banks offer a wider variety of services than any other financial institution. They have been termed the "department stores of finance." Some of their major functions include the receiving of demand deposits, the lending of funds to individuals, partnerships and corporations, the receiving and administering of time and savings deposits, and the performance of personal trust services.

Because commercial banks are the principal reservoir of other people's money, they are regulated to a relatively high degree. Aside from state banking authorities, they may be subject to the jurisdiction of the Federal Reserve Board, the Federal Deposit Insurance Corporation and the Comptroller of the Currency. This governmental regulation necessarily limits to an extreme degree the scope and character of competition among commercial banks.

Demand deposits held by commercial banks account for approximately 80% of the money supply of the United States. For the commercial banking system as a whole, two-thirds of total deposits are demand in nature. In June of 1960, more than 83% of the total deposits of PNB and Girard combined were in the form of demand deposits.

In addition to demand deposits, the area of commercial and industrial loans is one in which great emphasis is placed. Because of this concentration in demand deposits on the part of commercial banks, these commercial and industrial loans are necessarily short term in nature. As has been pointed out previously, PNB, as of June 30, 1960, had approximately 57% in dollar amount of its total loans in the commercial and industrial area, and Girard had approximately 49% in dollar amount of its loans in this same category.

Small and medium size borrowers rely to a great extent on commercial banks to meet their financial needs. In fact, a substantial proportion of loans made in the United States are made to smaller size businesses. In 1955, for example, out of a total of 1,103,000 loans made by member banks of the Federal Reserve, 918,000 were made to businesses with total assets under $250,000. It was testified at the trial of this case that a Philadelphia businessman would find it very difficult to procure an unsecured, short-term loan from any source other than a commercial bank.

Commercial banks are restricted in the nature, amount, volume and purpose of loans they are permitted to make. All national banks and banks chartered in Pennsylvania and most other states are, in general, not permitted to have outstanding loans to any one customer in an amount in excess of 10% of their capital and surplus. This is what is known as the "lending limit." In addition, those commercial banks

which are members of the Federal Reserve must maintain on deposit with the Federal Reserve Bank, or in currency in their own bank, reserves equal to 16.5% of their total demand deposits if they are located in certain areas (including Philadelphia), and 12% if they are so-called country banks. The principal factors in competition among commercial banks are convenience, quality of service, personal relationships, and the capacity to meet the requirements of the customer. The foregoing remarks are not intended to present a comprehensive analysis of commercial banking but all bear on the problem of whether or not the proposed merger violates the statutes.

The initial problem in litigation of this nature, in either a Sherman Act or Clayton Act case, involves a determination of the relevant market within which the defendants compete. *United States* v. *duPont & Co.*, 353 U. S. 586 (1957); *United States* v. *Columbia Steel Co.*, 334 U. S. 495 (1948). To find this area of effective competition, the plaintiff must establish a product market (line of commerce) and a geographic market (section of the country).

The Product Market

The Plaintiff contends that the appropriate lines of commerce in which to gauge the effects of this proposed merger under Section 7 of the Clayton Act are the following: Commercial banking, commercial and industrial loans, installment lending to individuals, single payment loans to individuals, real estate loans, personal trusts, time deposits of partnerships and corporations, time and savings deposits, demand deposits, and IPC (Individual, Partnership and Corporation) demand deposits.

At the outset, the Court is confronted with the problem of deciding which test to apply in determining the

appropriate line or lines of commerce. The plaintiff contends that the relevant legal standard for delineating the lines of commerce in which a merger may substantially lessen competition or tend to create a monopoly is whether the products (services) "have sufficient peculiar characteristics and uses to constitute them products sufficiently distinct from all others . . ." This was the test applied in *United States v. E. I. duPont deNemours,* 353 U. S. 586, pp. 593-4 (1957). The plaintiff argues that the record in this case shows that the general services, as well as certain specialized services, of commercial banks are either not supplied at all or at best supplied only peripherally and imperfectly by other sources.

The defendants suggest another test. They claim that the proper legal standard to be applied in defining the product market is to determine whether the products are "reasonably interchangeable for the purposes for which (they) are produced—price, use and qualities conisdered." The Supreme Court utilized this test in the so-called *Cellophane* case. *United States v. E. I. duPont deNemours,* 351 U. S. 377, 404 (1956). Defendants contend that commercial banking in its entirety is not a product line. Rather, they submit it is a business which has two major subdivisions—the acceptance of deposits in which the bank is the debtor, and the making of loans in which the bank is the creditor. Both of these major divisions are further divided by distinct types of deposits and loans. As to many of these functions, there are different types of customers, different market areas, and, most importantly, different types of competitors and competition. With the possible exception of demand deposits, there is an identical or effective substitute for each one of the services which a commercial bank offers. From this the Court is to conclude that because the services offered by other

financial institutions are reasonably interchangeable with those offered by commercial banks, the separate lines of commerce suggested by the plaintiff cannot be limited merely to commercial banks, but must include in each and every case the services of other financial institutions as well.

Despite the fact that the rule suggested by the plaintiff was enunciated in litigation involving the Clayton Act, while the other was formulated in a Sherman Act case, and recognizing that the parties here imply that the standards are not consistent, it is nevertheless the opinion of this Court that they are nothing more than expressions of the same rule in different language. As Judge Herlands stated in *United States* v. *Columbia Pictures Corp.*, 189 F. Supp. 153, pp. 183-4 (S.D.N.Y. 1960).

> "To determine whether or not there is a reasonable probability of a substantial lessening of competition, Section 7 of the Clayton Act demands an examination into economic realities. All competition must be considered, including competition faced by the product in question from other products.
>
> "The tests enunciated by the authorities are consistent. Effectively, the test 'reasonable interchangeability for the purposes for which (the products) are produced—price, use and qualities considered', and the test 'sufficient peculiar characteristics and uses to constitute them products sufficiently distinct . . . to make them a line of commerce within the meaning of the Clayton Act' are but different verbalizations of the same criterion.
>
> "They require the same accumulation and scrutiny of facts and application of judgment. The task is to find the area of effective competition.

> The 'characteristics and uses' formulation does not limit the court's inquiry to physical attributes and foreclose inquiry into the competitive situation."

For example, applying this reasoning to the instant case, if a commercial bank has sufficient peculiar characteristics and uses to constitute it sufficiently distinct from all other financial institutions, then a commercial bank cannot reasonably be interchanged with other financial institutions by the individual or business firm. Conversely, if a commercial bank can reasonably be interchanged, then its characteristics and uses must not have those sufficient peculiar characteristics and uses necessary to constitute it sufficiently distinct from other financial institutions.

In attempting to justify its choice of "lines," the plaintiff has endeavored to describe the uniqueness of each one. The defendants have challenged this approach by showing that many other institutions offer very similar services. Thus, plaintiff asserts that only a commercial bank makes unsecured, short-term commercial and industrial loans, while the defendants argue that insurance companies, factors and finance companies make commercial and industrial loans.

Defendants attack the suggested line "installment loans to individuals" on the ground that mutual savings banks, savings and loan associations, credit unions, finance companies, as well as other institutions, all engage in installment lending. Therefore, they argue, it is impossible to gauge the effect that the merger would have without knowing not only the percentage figures for PNB and Girard but also the percentage figures for all these other institutions. This reasoning is used in denouncing almost all of the suggested lines.

It is argued that insurance companies are in direct

competition with commercial banks in the making of single payment loans to individuals. And, PNB and Girard contend that several other institutions make real estate loans; that individuals are in direct competition with commercial banks in the personal trust field; that time deposits of partnerships and corporations face competition from many alternatives, including United States Government obligations, commercial paper, tax-free securities, and banker's acceptances; that savings deposits are not an appropriate line because many other institutions receive savings funds.

Finally, plaintiff claims that demand deposits and IPC demand deposits are a separate product line because only commercial banks are authorized to receive them.

It seems quite apparent that both plaintiff's and defendants' positions have some merit. However, it is not the intention of this Court to subdivide a commercial bank into certain selected services and functions. An approach such as this, carried to the logical extreme, would result in many additional so-called lines of commerce. It is the conglomeration of all the various services and functions that sets the commercial bank off from other financial institutions. Each item is an integral part of the whole, almost every one of which is dependent upon and would not exist but for the other. The Court can perceive no useful purpose here in going any further than designating commercial banking a separate and distinct line of commerce within the meaning of the statute. It is undoubtedly true that some services of a commercial bank overlap, to some degree, with those of certain other institutions. Nevertheless, the Court feels quite confident in holding that commercial banking, viewed collectively, has sufficient peculiar characteristics which negate reasonable interchangeability.

Section of the Country

The plaintiff contends that the relevant geographic area for each line of commerce in which to gauge the impact of the proposed merger on competition is the four-county area (Philadelphia, Montgomery, Bucks and Delaware Counties). Under Pennsylvania banking laws, commercial banks may open offices in the political community where their main office is situated, in some other political community within their home county, or in any county contiguous to the county in which the main office is located. At the present time, PNB has offices in Philadelphia and the three contiguous counties of Bucks, Montgomery and Delaware. Girard has offices in Philadelphia, Montgomery and Delaware counties. Plaintiff submits that the phrase "section of the country" in Section 7 must be determined with respect to buyers and sellers. Recognizing that it is as unlikely that any given group of sellers would have all their sales within any specific area, as it is that potential customers in such an area would buy from them to the exclusion of all others, plaintiff argues that the antitrust laws are satisfied if buyers and sellers in a distinguishable area are significantly limited to that area.

The defendants suggest that the plaintiff has proposed the four-county area in order to inflate the percentage figures. They contend that a relevant geographic market for banking services must take into consideration not only the location of the bank and the location of its customers, but also the different types of customers and the location of alternative choices available to them.

Plaintiff has presented a multitude of statistical information showing the source of the defendants' business which the Court will not reiterate here. A few examples should be sufficient. As of September, 1960,

combining the figures for the two banks, commercial and industrial loans outstanding in the four-county area amounted to 57% of the total dollar amount; loans to individuals in the four-county area amounted to 72% of the total dollar amount; lines of credit outstanding amounted to 49% of the total dollar amount; personal trusts originating within the four-county area amounted to 83.1% of the total; and, demand deposits originating within the four-county area amounted to 75.4% of the total dollar amount.

Notwithstanding the fact that some of these percentage figures, at first blush, appear to be substantial, it is the opinion of the Court that the plaintiff has failed to establish that the four-county area is the appropriate section of the country in which to test the legality of the merger.

Commercial bank markets are extremely complex. It is difficult to pin point a specific locale as the relevant geographic market. PNB and Girard compete in the international, national, regional, as well as the local, markets depending upon the particular service and the customer involved.

In addition, the relevant geographic market is a bilateral concept. Not only must the Court consider the origin of the bank's business, but equally as important are the alteratives available to the customer. Borrowers are not limited by political boundaries, although the smaller ones are limited in range. The alternatives available necessarily depend on the size and financial condition of the customer.

The larger customers definitely have alternatives ranging from regional to national. It was very surprising to learn at the trial of this case that not only New York banks solicit and receive substantial business from customers within the four-county area, but

also large banks from all the larger cities in the nation do likewise. Further, the Court is satisfied that PNB and Girard derive a substantial amount of business from without the four-county area.

What then is the "section of the country"? At the very least, it must include the entire Delaware Valley (i.e., Philadelphia, Bucks, Montgomery, Delaware, Chester, Camden, Burlington and Gloucester counties, the last three being in New Jersey), or the ten-county area referred to by the defendants and definitely New York City. However, it probably would be more accurate to state that the relevant geographic market in which PNB and Girard compete includes the greater part of the northeastern United States.

Unfortunately, the Court does not have comparative figures on the relative size of the defendant banks' business in these areas as contrasted with local banks. Plaintiff has confined its proof almost solely to the four-county area. For this reason, the Court could terminate its discussion of the Clayton Act at this point. The legality of a merger cannot be tested without a relevant market. However, the Court will assume, although it holds otherwise, for the remainder of the opinion that the plaintiff has proved that the four-county area is the "section of the country."

The Clayton Act

With this arguendo assumption (i.e., that plaintiff has established the four-county area as the relevant geographic market), the issue arising under the Clayton Act can now be stated: Whether the proposed merger of PNB and Girard may substantially lessen competition or tend to create a monopoly in commercial banking in the four-county area, in violation of Section 7 of the Clayton Act.

The plaintiff contends that the proposed merger is in violation of Section 7 because of the following reasons: (1) the undeviating trend toward banking concentration in the four-county area; (2) the direct, substantial competition which will be eliminated; (3) the unlikelihood of substantial new entrants into the business; and (4) the much larger resources the merged bank would have.

Plaintiff places considerable weight on the second reason above listed. Cited is the often quoted section of the House Report which reads in relevant part:

> "The bill is intended to permit intervention in such a cumulative process when the effect of an acquisition may be a significant reduction in the vigor of competition, even though this effect may not be so far-reaching as to amount to a combination in restraint of trade, create a monopoly, or constitute an attempt to monopolize. Such an effect may arise in various ways: such as elimination in whole or in material part of the competitive activity of an enterprise which has been a substantial factor in competition. . . ." H. R. Rep. No. 1191, 81st Cong. 1st Sess. (1949), p. 8.

It is the plaintiff's position that the elimination of Girard, which defendants readily admit is in direct competition with PNB, will substantially suppress and lessen competition with the consequent tendency to monopoly.

Defendants, on the other hand, submit that the legislative history of the 1950 amendment to Section 7 of the Clayton Act discloses clearly that Congress did not intend that a merger or acquisition would be unlawful merely by reason of the elimination of competition between two business enterprises. It is argued that the basic test is whether, after considering all of the rele-

vant factors, there is a reasonable probability of a significant reduction in the vigor of competition.

It is the opinion of this Court that the defendants have correctly stated the proper test. As mentioned previously, the key factor in all the antitrust laws is the preservation of vigorous competition. Unfortunately, Congress has not spelled out any definite formula for judging the legality of a merger under Section 7. Consequently, several different tests have been used or suggested, many of which have been subjected to severe criticism. However, the most practical one, from this Court's point of view, is that recognized in *American Crystal Sugar Co.* v. *Cuban-American Sugar Co.*, 259 F. 2d 524, 527 (1958):

> "And the ban on a substantial lessening of competition 'in any line of commerce in any section of the country,' requires, for determination of a violation, first, a definition of a relevant market in which a lessening of competition has probably occurred and, second, analysis of the nature and extent of the competition within that market. Consequently, the parties are agreed that an acquisition is not illegal because of its impact on competition between the corporations involved: that the proper test is one of the *qualitative* substantiality of the resulting effect on competition in the relevant market. We too agree. We hold that only an acquisition which in the long run may reasonably be expected to substantially lessen competition within a relevant market, will violate Section 7 as amended." (Emphasis supplied)

The "qualitative substantiality" test, in contradistinction to "quantitative substantiality", requires an appraisal of all the relevant factors, not merely a determination of the aggregate share of the market

which would be held by the merged banks. A qualitative analysis is the only procedure which this Court feels justified to follow. This type of an approach, however, is not without difficulty. Involved is a selection of those factors which can be considered relevant.

The Court will discuss and answer the following relevant questions: (1) How much of an increase in concentration will be brought about by the merger? (2) Will the increase in concentration give the merged bank the power to control the price and supply of banking services? (3) Will the merger eliminate a substantial competitor from the market? (4) What is the competitive situation among commercial banks in the relevant market today? (5) What will probably be the competitive situation after the merger? (6) What is the probability of a new commercial bank coming into existence in the four-county area? (7) What is the history of defendants with respect to prior mergers?

The Court is not unmindful of the fact that the relevancy of many of these factors has been challenged more than once. Nevertheless, the Court believes that the answers to these questions, considered collectively, rather than individually, will be valuable in predicting the vigor of competition in the relevant market after the merger. Perhaps other questions might also be posed. The Court, however, thinks that those presented are sufficient to give the correct answer. It should be noted that in this discussion, the Court will not advert to the benefits of the proposed merger. The Court is convinced that the merger will definitely benefit the community, but does not consider this particularly relevant in the present discussion of the question posed. The questions and discussions thereon follow:

(1) Increase in Concentration: As of December 31, 1960, there were 41 commercial banks with head offices in the four-county area, operating 284 commercial

banking offices throughout Philadelphia, Bucks, Montgomery and Delaware counties. The largest bank, as of June 30, 1960, had total assets equal to 22.9% of the assets of all commercial banks with head offices in the four-county area. PNB ranked second with 21% and Girard, third with 16.1%. After the merger, the defendants would have approximately 37.1% of all the assets of all commercial banks within the four-county area.

PNB, as of October 3, 1960, had total net loans equal to 19.8% of the total loans made by all commercial banks with head offices in the four-county area. Girard had 14.6% of the total. The remaining three largest commercial banks in the four-county area, as of the same date, had 23.8%, 10.2%, and 9.1% respectively, of total net loans of all commercial banks with head offices in the four-county area. The combined bank would hold approximately 34% of all the loans of all commercial banks with head offices in the four-county area.

PNB, as of October 3, 1960, had total deposits equal to 21.3% of the total deposits of all commercial banks with head offices in the four-county area. Girard had 14.5% of the total. The other three largest commercial banks, as of the same date, had total deposits representing 22.1%, 9.9% and 9.3%, respectively, of total deposits of all commercial banks with head offices in the four-county area. The combined bank would hold approximately 36% of all the deposits of all commercial banks with head offices in the four-county area.

The defendants rebut this increase in concentration charge with some figures of their own. Although the Court does not consider concentration in other cities decisive in this case, some of the percentage figures are nevertheless worthy of mention and consideration. If the 53 reserve and central reserve cities of the Federal

Reserve System are ranked in the order of the percentage of total commercial banking assets in each city held by the largest commercial bank in that city as of June 1956, Philadelphia would, after the proposed merger, rank 32nd with 36.16%. Of the 224 cities in the United States with populations over 500,000 in 1956, 190 had a commercial bank with 35% or more of the total commercial banking assets in the city. There are four commercial banks in the United States, each with a lending limit greater than the aggregate of the lending limits of all the commercial banks in Philadelphia. Each of 20 commercial banks in the United States has a lending limit greater than that of any commercial bank in Philadelphia, and 9 of these are in cities smaller than Philadelphia. 13 such banks, 4 of which are in cities smaller than Philadelphia, have a lending limit greater than that of the proposed merged bank. The Court finds that no dangerously potential concentration will result from this merger.

(2) Power to Control Price and Supply of Banking Services: The plaintiff has not pressed this point in its post-trial brief. However, Dr. Oscar Goodman, Professor of Finance at the Graduate School of Business of Northwestern University, testified for the plaintiff that the merged bank would have the power to affect the price and supply of available bank credit within the four-county area. The Court is satisfied, however, that defendants have proved this to be impossible. Entirely too much competition exists at all levels to permit such an occurrence. The merged bank would lose a substantial amount of business in a brief period of time if it attempted to dictate the price and/or control the supply of credit in the four-county area. The increase in size would not be sufficient for market domination. Because there are so many alternative choices for borrowers of all sizes, the merged bank would be un-

able to cause its competitors to raise service charges or interest rates, or prevent any borrower fom having his banking needs met by other commercial banks.

(3) Elimination of a Substantial Competitor: Defendants do not (indeed they cannot) deny that substantial direct competition will be eliminated by the merger. PNB and Girard compete in the offering of banking services as well as in the acquisition of branch sites in the contiguous three counties. A substantial part of the transcript of testimony is directed to this area. However, the figures previously set out speak for themselves. Nothing would be gained in reciting the additional facts with respect to this phase of the case. Suffice it to state that the plaintiff has established that PNB and Girard do engage in substantial direct competition one with the other, but the Court, as discussed more fully infra, finds that the elimination of one competitor will not result in a lessening of vigorous competition in the commercial banking field.

(4 and 5) Competition: It is fair to say that competition among commercial banks in the four-county area is extremely vigorous. The plaintiff has not suggested otherwise; but, notwithstanding the established fact that Girard, a substantial competitor of all commercial banks in the four-county area, would be eliminated by the merger, the defendants contend that competition in the four-county area would be intensified *after the merger*.

Defendants produced several witnesses, including many representatives of other Philadelphia commercial banks, who testified that competition, after the merger, would be increased rather than lessened. For example, W. Carlton Harris, Emeritus Professor of Finance at the University of Pennsylvania and a director of the Broad Street Trust Company, testified that the merger would sharpen and probably increase com-

petition among Philadelphia banks. He stated that this was the effect of previous mergers in the area. Samuel Weinrott, Chairman of the Board of Industrial Valley Bank and Trust Company, asserted that banking competition in Philadelphia today is greater than it was ten years ago. It was his opinion that competition would be increased by the merger. Mr. Weinrott stated, as did many of the other bankers, that he expected to acquire new business from defendants' customers who might have accounts with both PNB and Girard, or who might not approve of the merger for one reason or another. He also testified that smaller banks can and do compete actively with larger banks, and that previous mergers have not hindered the growth of the smaller banks. This opinion was substantiated by the exhibits produced, charting the rate of growth of the small commercial banks. Albert T. Mason, President of Liberty Real Estate Bank and Trust Company, Hubert J. Horan, Chairman of the Board of Broad Street Trust Company, and S. Harry Galfand, Chairman of the Board of Citizens and Southern Bank, all repeated in substance the testimony of Mr. Weinrott.

Lewellyn A. Jennings, Senior Vice-President of the Republic National Bank of Dallas, and former Acting Comptroller of the Currency, testified that competition among commercial banks was never keener and that all commercial banks are after mass banking business, competing for small and medium size loans. It was also his opinion that the merger will increase existing and potential competition in commercial banking in the Philadelphia area.

Dr. Warren Smith, Professor of Economics at the University of Michigan, however, testified that the elimination of a large lender will significantly reduce the degree of competition because an important alternative source of credit for many borrowers, over a

rather wide area, will be eliminated. Indeed, this is the crux of the plaintiff's case. He, Professor Smith, without any banking experience, stands alone in this forecast which the Court does not accept.

It is true that one alternative source of credit will be eliminated. It should be noted, however, that borrowers would have available the following alternatives after the merger: 41 commercial banks for loans up to $10,000; 39 for loans up to $25,000; 35 for loans up to $50,000; 27 for loans up to $100,000; 18 for loans up to $250,000; 10 for loans up to $500,000; 7 for loans up to $1,000,000; 4 for loans up to $2,500,000; 3 for loans up to $5,000,000; 2 for loans up to $7,000,000; and 1, as a result of the merger, for a loan up to $15,000,000. If these alternative sources intend to compete more vigorously than before, thereby increasing rather than decreasing the competitive pressure, Dr. Smith's conclusion that the merger will significantly reduce the degree of competition does not necessarily follow. Moreover, the main bone of contention here is that the merger will have its most serious effects on small and medium size borrowers. The above figures, however, indicate to the Court that there are more than an adequate number of sources for these types of borrowers. In fact, it has been established that a borrower turned down by three banks would be unable, with few exceptions, to obtain a loan at another commercial bank. And, of course, those borrowers in need of larger loans are not limited to the few banks in Philadelphia capable of making such a loan.

It is the conclusion of this Court that all indications are that competition will be even more vigorous after the merger than before.

(6) Probability of New Entrant: Plaintiff contends that it is very unlikely a substantial competitor will enter the market. Although the number of commercial

banks in the four-county area has decreased from 108 in 1947 to 42 in 1960, it is nevertheless a fact that a commercial bank has been established in the last decade just outside Philadelphia, the Bank of Old York Road, which has experienced rapid and substantial growth. It would be pure conjecture on the part of this Court, however, to predict that a substantial competitor will not likely enter the market in the future.

(7) Past Acquisitions: It has been established that a substantial part of the present size of both PNB and Girard has been achieved as the result of merger and consolidation in the last ten years. However, it has been shown that mergers with existing banks in the suburbs of Philadelphia were, in many cases, the only feasible way for larger banks to follow the migration of many of their customers into these areas. In addition, in many cases, it appears that small banks in the four-county area have found mergers with larger banks to be a solution to their problems of inadequate banking services, rising costs, and management succession.

In summary, it can be said that although the merger will increase concentration to the percentage figures given, the merged bank would have no power to control the price and supply of credit, nor could it dominate the market in any manner. And, although a direct substantial competitor will be eliminated, the only competent testimony upon the subject establishes that competition will be more vigorous after the merger. Also, although the commercial banking field is not an easy one to enter, it cannot be concluded that a new bank will not be established in the four-county area in the future. Finally, although the defendants have engaged in prior mergers, these mergers have had valid business purposes as the motivating force.

Viewing all this collectively, the Court can see no reasonable probability that competition among com-

mercial banks in the four-county area will be substantially lessened.

Moreover, it is difficult to perceive a reasonable probability that this merger will tend to create a monopoly in commercial banking in the four-county area. Certainly, every time one bank in an area is eliminated, the path toward an eventual monopoly or oligopoly is shortened. This can be said for the most insignificant combination. But this does not mean that a monopoly is inevitable. Especially is this true in the area of bank mergers. Every future merger in the four-county area will be subject to the close scrutiny of the appropriate state and federal agency. At some point any trend, if discernible in the future, will be checked. Although some of plaintiff's witnesses, for the most part independent bankers from smaller communities throughout the country, were of the opinion that approval of this merger would trigger others in the four-county area, as well as the remainder of the United States, this Court is not prepared to concur. The competitive situation that exists in the four-county area, with the many alternatives available to a prospective customer, leads to the inescapable conclusion that any tendency to monopoly or oligopoly at this stage is nonexistent. What happens in the future must be left to the appropriate federal banking agency, and, if necessary, to another Court at another time. All that is being said is that this particular merger will not tend to create a monopoly.

The Sherman Act

This Court has also been called upon to decide whether the combination of PNB and Girard will result in an unreasonable restraint of trade or commerce in commercial banking in the four-county area in violation of Section 1 of the Sherman Act. Of course, the

same assumption with respect to the relevant geographic market applies here as it did when the Clayton Act was considered.

Very briefly it can be stated that a merger which does not violate the Clayton Act can hardly be held to violate the more stringent standards of the Sherman Act.

Even aside from any consideration of the Clayton Act, however, the plaintiff has failed to establish by a fair preponderance of the evidence that the proposed merger constitutes an unreasonable restraint of trade or commerce. To warrant an injunction restraining an alleged violation of Section 1, there must be a definite factual showing of illegality. *Standard Oil Co. v. United States*, 283 U. S. 163, 179 (1931).

In *United States v. Columbia Steel Co.*, 334 U. S. 495, 527-528 (1948), the Supreme Court laid down some guidelines to be considered when an acquisition of assets is being challenged under the proscriptions of the Sherman Act:

> "It is first necessary to delimit the market in which the concerns compete and then determine the extent to which the concerns are in competition in that market. If such acquisition results in or is aimed at unreasonable restraint, then the purchase is forbidden by the Sherman Act. In determining what constitutes unreasonable restraint, we do not think the dollar volume is in itself of compelling significance; we look rather to the percentage of business controlled, the strength of the remaining competition, whether the action springs from business requirements or purpose to monopolize, the probable development of the industry, consumer demands, and other characteristics of the market. We do not undertake to prescribe any set of percentage figures by which to measure the reasonableness of a corporation's enlargement of its

activities by the purchase of the assets of a competitor. The relative effect of percentage command of a market varies with the setting in which that factor is placed."

The Court does not intend to repeat the facts considered when discussing the alleged violation of the Clayton Act. Suffice it to state that a re-evaluation of them, in light of what has been said above, convinces the Court that the proposed merger meets the "reasonable" test and does not violate Section 1 of the Sherman Act.

Findings of Fact and Conclusions of Law

The Government has submitted 600 proposed Findings of Fact and numerous proposed Conclusions of Law. The Court has reviewed these in great detail. Many of them have to do with separate lines of commerce which clearly are not applicable since the Court has found that the line of commerce is commercial banking in all its integral parts. An inordinate number refer to the four-county area which the Court has determined not to be the relevant market. Many have no bearing on the decision of the action.

The Court, therefore, makes the following rulings on the Government's proposed Findings of Fact:

Nos. 1 to 8 incl. affirmed; 9 and 10 refused as stated; 11, 12, 13 affirmed; 14 refused as stated; 15, 16, 18 affirmed; 19 refused as stated; 20 to 23 incl. affirmed; 24, 25 refused as stated; 26, 27, 28 affirmed; 29, 30, 31 refused as stated; 32 affirmed; 34 refused as stated; 35 affirmed; 36 refused as stated; 37 affirmed; 38 refused as stated; 39, 40 affirmed; 41 refused as stated; 42 affirmed; 43 refused as stated; 44 to 47 incl. affirmed; 48 refused as stated; 49 affirmed; 51, 52, 53 refused as stated; 54 to 68 incl. affirmed; 69 refused as

stated; 70 affirmed; 71 refused as stated; 72, 73, 74, affirmed; 75 refused as stated; 76 to 82 incl. affirmed; 83 refused as stated; 84, 85 affirmed; 86, 87 refused as stated; 88, 89, 90 affirmed; 91 to 157 incl. refused as stated as not pertinent to the decision of this case; 158 to 231A refused as stated, since these requests are designed to establish separate lines of commerce, and the Court has determined commercial banking, in all its relevant integral parts, is the line of commerce involved; 232 to 285 incl., the statistical tables are approved; the conclusions therefrom which the plaintiff asked the Court to draw are denied, and the remaining parts are refused as stated; 286 to 290 incl. affirmed; 291 refused as stated; 292 to 297 incl. affirmed; 298 refused as stated; 299 to 318 incl. affirmed; 319 refused as stated; 320 to 325 affirmed; 326 refused as stated; 327, 328 affirmed; 329, 330, 331 refused as stated; 332 affirmed; 333 to 335 incl. refused as stated; 336 to 345 affirmed; 346 refused as stated; 347, 348, 349 affirmed; 350 refused as stated; 351 affirmed; 352 refused as stated; 353 affirmed; 354 refused as stated; 355, 356 affirmed; 357 refused as stated; 358 affirmed; 359 refused as stated; 360 affirmed; 361, 362 refused as stated; 363 to 384 incl. affirmed; 385, 386 refused as stated; 387, 388, 389 affirmed; 390, 391 denied; 392, 393, 394 affirmed; 395, 396 refused as stated; 397 to 401 incl. denied; 402 to 431 incl. refused since they presuppose a four-county relevant market which the Court has found to be nonexistent; 432 to 458 affirmed; 459 refused as stated; 460, 461 affirmed; 462 denied; 463 to 471 affirmed; 472, 473 refused as stated; 474 affirmed; 475 to 600 incl. refused as stated; these requests are argumentative, do not completely reflect the situations developed by the testimony, and do not reflect the findings of the Court as set forth in the Opinion.

The Conclusions of Law submitted by the plaintiff are refused as stated.

The affirmation of plaintiff's proposed Findings is subject to the Findings of the Court as to the facts of the case set forth in the Opinion, and in the event of any possible conflict between the proposed Findings of Fact and statements made in the Opinion, the language of the Opinion shall govern.

Of the defendants' requested Findings of Fact, Requests Nos. 54, 55, 58 to 92, and Request No. 162 are refused as stated and the remainder Requests are affirmed.

In the event of any possible conflict between defendants' requested Findings of Fact and statements made in the Opinion, the language of the Opinion shall govern.

All Conclusions of Law requested by the defendants are refused as stated.

RESUME

As before stated, this is the first action tried after the passage of the Bank Merger Act of 1960. The controversy inherent in the case between co-ordinate branches of the Executive Department of Government is to be regretted. Congress, in passing the Bank Merger Act, deliberately fixed the responsibility of approving or disapproving proposed mergers of national banks in the Comptroller of the Currency. This responsibility was fixed despite vigorous protests of individual bankers and the Department of Justice. The Comptroller of the Currency then, by Act of Congress, was of necessity required to consider the reports of the Federal Reserve Board, the Federal Deposit Insurance Corporation, and the Attorney General, with respect to the competitive factors involved. All three of these Departments of Government reported that

in the opinion of their experts, the consummation of the proposed merger would adversely affect competition in the Philadelphia area. The Federal Deposit Insurance Corporation concluded that the merger would not be adverse in the regional, national and international field of competition. With these reports available to him, and after considering them, the Comptroller, in pursuance of his statutory duty, reviewed them and despite their content, approved the merger as not involving undue concentration of banking power, not tending toward a monopoly, not destructive of competition in the commercial banking field, and definitely in the public interest. The Court, after a full trial, agrees completely with the conclusions of the Comptroller of the Currency.

This is one of the few instances in which one Department of the Government, after having been consulted and its advice not being followed, has challenged in the Court the findings of a co-ordinate Department of the Executive Branch of the Government on the basis of disagreements between Departments of our Government. And what is the expertise of these three dissenting co-ordinate branches of the Executive Department that prompted this challenge? The Courts have uniformly held that once Congress has reposed its confidence in the expertise of a particular Department, the Courts should not substitute its judgment in the place and stead of the Department involved. The Government has asked this Court, without the production of a single shred of evidence, and on the basis of reports no more illuminating than that of the Comptroller of the Currency, to give legal effect to the conclusions of the dissidents, rather than the Department charged with the responsibility.

This Court fails to see how any court, without some factual basis being laid therefor, could accede to any

such request and this is all the more true in this particular case where experienced, substantial bankers throughout this entire area have appeared in open court, subjected themselves to searching cross-examination, and have unanimously demonstrated that the proposed merger would not cause an undue concentration of banking, would not tend toward a monopoly, and definitely would increase the vigor of competition which the Congress of the United States from the passage of the Sherman Act down to the present date has, by law, attempted to foster.

The Court was not impressed with the attempts of the Government to show that banking is of minor importance in the life of a community generally and of almost absolute unimportance in the business life of the community. The Government, in its attempt to establish this contention by testimony that no single particular individual industrial organization had ever entered a particular territory because of the presence or absence of banking facilities, has ignored the industrial history of the United States. Should one ever speculate as to whether any industry would enter a community without banking facilities, the answer would be completely obvious. Historically, banking facilities have preceded industry in every community.

The Government also attempted to show that by combining the lending limits of all Philadelphia banks, borrowers in the larger categories could be well accommodated. This ignores again the realities of the situation and the positive testimony that in the larger industries, there is a decided reluctance on the part of financial officers to be made the subject of participating loans. With the originating bank, there is also an aversion to these loans as it requires considerable negotiation and technical handling which is to be avoided wherever possible.

The evidence demonstrated beyond peradventure of doubt that the Philadelphia area, plus parts of Delaware and New Jersey, and also New York City, as well as most of the northeastern part of the United States, is the area of active competition for Philadelphia commercial banks and for the proposed merged bank. The testimony discloses that the competitive effect upon all Philadelphia commercial banks will be minimal. The larger bank, however, will be able to compete on better terms and in a better atmosphere with the banks of other cities and states that have been draining this area of banking business which might well be and perhaps properly should be handled here, and which cannot be handled under present circumstances. That it will benefit the city and area has been established clearly by a fair preponderance of the evidence, as has been set forth in the Findings of Fact of the defendants previously affirmed.

There is nothing in this record which supports the averments of the complaint that the proposed merger involves an unlawful combination in restraint of trade; would result in or tend toward monopoly, or violate the provisions of the Clayton Act, if applicable; and the proposed merger certainly violates no provision, either express or implied, contained in the Bank Merger Act of 1960.

Since the proposed merger contains none of the defects alleged in the Government's case and will be in the public interest, it follows that judgment must be entered in favor of the defendants and against the plaintiff.

Conclusions of Law

1. The Court has jurisdiction of the parties and of the subject matter.

2. The Bank Merger Act of 1960 does not, by its

terms, remove bank mergers from the application of either the Sherman Antitrust Act or the Clayton Act.

3. The approval of the merger by the Comptroller of the Currency, under the Bank Merger Act, is not the final and exclusive determination of its legality.

4. The proposed merger of the Philadelphia National Bank and the Girard Trust Corn Exchange Bank is not within the scope of Section 7 of the Clayton Act.

5. Plaintiff has failed to prove that the merger would violate Section 7 of the Clayton Act, even assuming the same to be applicable, because the preponderance of credible evidence shows:

(a) That the four-county area is not the relevant geographic market (see plaintiff's requests 5, 6, and 372);

(b) Even assuming that the four-county area is the relevant geographic market, credible evidence shows that the proposed merger will not substantially lessen competition or tend to create a monopoly in commercial banking in the four-county area.

6. The plaintiff has failed to prove by a fair preponderance of credible evidence that the merger will unreasonably restrain trade and commerce in commercial banking either in the relevant geographic market or in the four-county area.

7. Defendants are entitled to judgment dismissing the complaint in its entirety on the merits.

An order dismissing the action with prejudice will be filed concurrently with this opinion.

IN THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA

CIVIL ACTION 29287

UNITED STATES OF AMERICA, PLAINTIFF,

v.

THE PHILADELPHIA NATIONAL BANK AND GIRARD TRUST CORN EXCHANGE BANK, DEFENDANTS

ORDER

AND NOW, to wit, this 15th day of January, 1962, for the reasons set forth in the Opinion filed concurrently herewith, it is ORDERED, ADJUDGED AND DECREED that the prayers in the Complaint of the plaintiff, United States of America, that the agreement of consolidation between defendants, The Philadelphia National Bank and Girard Trust Corn Exchange Bank, be adjudged and decreed to be unlawful, in violation of Section 1 of the Sherman Act and Section 7 of the Clayton Act, and that the defendants, The Philadelphia National Bank and Girard Trust Corn Exchange Bank, be enjoined from carrying out the said agreement of consolidation, be and they are hereby DENIED; further, that the action be and it is hereby DISMISSED ON THE MERITS, with prejudice.

BY THE COURT:

/s/ THOMAS J. CLARY,

No. 799.

UNITED STATES OF AMERICA,

Appellant,

v.

THE PHILADELPHIA NATIONAL BANK AND GIRARD TRUST CORN EXCHANGE BANK

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA.

MOTION TO AFFIRM ON BEHALF OF THE PHILADELPHIA NATIONAL BANK, APPELLEE.

Pursuant to paragraph 1(c) of Rule 16 of the Revised Rules of this Court, The Philadelphia National Bank (hereinafter called "PNB") moves that the judgment of the district court be affirmed on the ground that the questions are so unsubstantial as not to warrant further argument.

QUESTIONS PRESENTED.

In order to affirm the judgment of the district court at this stage, this Court does not have to examine all of the many questions which would be presented to it at full argument. It is necessary only to reach the following conclusions:

1. Mergers consummated under the national banking laws, such as the proposed one, are not subject to the provisions of Section 7 of the Clayton Act.

2. There is no showing that the proposed merger would constitute a restraint of trade under Section 1 of the Sherman Act.

These two determinations by the district court are so clearly correct as not to need further argument. The non-applicability of Section 7 of the Clayton Act, a purely legal question, has been previously determined by this Court and is clear from the language and legislative history of the applicable statutes. The non-violation of the more stringent provisions of Section 1 of the Sherman Act can also readily be determined inasmuch as appellant failed to produce any evidence or testimony that the proposed merger would constitute an unreasonable restraint of trade.

ARGUMENT.

The district court's opinion contains a complete review of the proceedings and no purpose will be served by repetition. It will be sufficient for the purposes of this motion to set forth the following conclusions upon which the district court based its judgment:

1. That the Bank Merger Act of 1960, 74 Stat. 129, amending 12 U. S. C. § 1828(c) (Supp. II, 1961), does not preclude a review of the proposed merger under the anti-trust laws (J. S. 12a-17a).[1]

2. That Section 7 of the Clayton Act, 15 U. S. C. § 18 (1958), does not apply to a bank merger of this nature (J. S. 17a-21a).

---

1. References to appellant's Jurisdictional Statement and Appendix are designated "J. S.". The requested findings of fact affirmed by the district court but not contained in the opinion are printed as a separate Appendix filed herewith by both appellees. References to pages in this Appendix are identified by the letter "b".

3. That commercial banking, as such, is a separate and distinct line of commerce, or a product market, for the purpose of testing the proposed merger under the antitrust laws (J. S. 24a-28a).

4. That the four-county area, consisting of Philadelphia and the three contiguous counties in Pennsylvania, is not a section of the country or a relevant geographic market for the purpose of testing the proposed merger under the antitrust laws (J. S. 29a-31a).

5. Assuming arguendo that Section 7 of the Clayton Act is applicable and that the four-county area is an appropriate section of the country, there is no reasonable probability that competition among commercial banks in the four-county area would be substantially lessened or that the proposed merger would tend to create a monopoly in commercial banking in the four-county area in violation of Section 7 of the Clayton Act (J. S. 31a-41a).

6. Assuming that the four-county area is the relevant geographic market, there is no evidence that the proposed merger would result in an unreasonable restraint of trade or commerce under Section 1 of the Sherman Act, 15 U. S. C. § 1 (1958) (J. S. 41a-43a).

Upon full argument of this case it would be necessary to examine each one of these points, but on this motion it is sufficient to review Conclusions 2 and 6 only. Obviously, if the Clayton Act is not applicable, and if it is readily evident that the Sherman Act has not been violated, this Court need go no further. Moreover, in order to simplify this motion, it will be assumed in considering the Sherman Act that commercial banking is a separate product market and that the four-county area is the relevant geographic market. Even with the issues thus limited, the decision of the district court is so obviously correct that further argument is unnecessary.

I. The Proposed Merger Is Not Within the Scope of Section 7 of the Clayton Act.

Appellant admits, as indeed it must, that the proposed merger is within the scope of section 7 only if it constitutes a stock acquisition rather than an acquisition of assets (J. S. 30). Accordingly the sole issue is whether the proposed merger encompasses an acquisition of stock.

Under the Agreement of Consolidation conforming to the national banking laws, 12 U. S. C. § 215 (Supp. II, 1961), "the corporate existence of Girard shall be merged into and continue in Philadelphia National which shall continue in existence as the Association, and the Association shall be deemed to be the same corporation as each of the consolidating banks." All of the property of each of the banks "shall be vested in the Association without any conveyance or transfer; and the Association shall be responsible for all the liabilities of every kind and description • • • of each bank existing as of the effective date" (J. S. 18a).

The Agreement of Consolidation also provides that immediately upon the merger becoming effective, the PNB stock certificates shall automatically represent shares of stock in the new Association, and that Girard certificates shall be surrendered to the Association in exchange for new certificates representing the number of shares in the Association "to which such shares of stock in Girard shall have been converted" (J. S. 19a).

Appellant contended before the district court that under the language of the Agreement PNB was acquiring the stock of Girard. It has abandoned this argument following the indisputable finding of the district court that (J. S. 20a):

> "The entire transaction is patterned in conformity with the applicable federal statute relating to bank consolidations and mergers of assets. The fact that certificates representing shares of stock are exchanged for new ones is merely incidental to the transaction, and in no way affects or alters its character."

Appellant now advances the equally remarkable contention that the merger "may be viewed" as consisting of an acquisition of stock by the new Association accompanied by an acquisition of the assets of the two banks by the new Association, both of which occur "in a single step" (J. S. 31-32). Quite possibly mergers have never been so "viewed" because this theoretical concept is directly contrary to the facts. In this merger, the assets and businesses of the two constituent companies will be combined by operation of law, and the interests of the shareholders of the two companies will automatically become proportionate interests in the new corporation without any transfer of stock. As the district court held, this transaction has entirely different indicia, mechanics and consequences than does an acquisition of stock (J. S. 20a-21a).

This Court has held in *Arrow-Hart & Hegeman Elec. Co. v. Federal Trade Commission*, 291 U. S. 587 (1934), construing the same language which appellant seeks to invoke here, that a statutory merger is not an acquisition of stock under section 7 of the Clayton Act. In that case, a holding company had acquired the common stock of two competitors, but, after the Federal Trade Commission had challenged the acquisition, the stock was transferred, the holding company was dissolved, and the two competitors were merged into a new corporation. In finding that the Commission had no jurisdiction under the Clayton Act, this Court said:

> "The statute does not forbid * * * the merger of corporations pursuant to state laws, nor does it provide any machinery for compelling * * * the distribution of physical property brought into a single ownership by [illegible].
>
> If, instead of resorting to the holding company device, the shareholders of Arrow and Hart & Hegeman had caused a merger, this action would not have been a violation of the Act." (291 U. S. at 595)

> "If the merger of the two manufacturing corporations and the combination of their assets was in any respect a violation of any antitrust law, as to which we express no opinion, it was necessarily a violation of statutory prohibitions other than those found in the Clayton Act. And if any remedy for such violation is afforded, a court and not the Federal Trade Commission is the appropriate forum." (291 U. S. at 599)

Furthermore, although the court divided 5 to 4 on a point not here involved, Mr. Justice Stone, speaking for the minority consisting of himself, Chief Justice Hughes, and Justices Brandeis and Cardozo, agreed:

> "It is true that the Clayton Act does not forbid corporate mergers but it does forbid the acquisition by one corporation of the stock of competing corporations so as substantially to lessen competition." (291 U. S. at 600)

A subsequent attempt by appellant to attack a statutory merger as a stock acquisition under section 7 of the Clayton Act was rejected by the District Court for the Southern District of New York, following "the clear mandate of the Arrow-Hart decision." *United States v. Celanese Corp.*, 91 F. Supp. 14, 16 (S. D. N. Y. 1950). In that case it was said that "Section 7 was not intended to apply to * * * the open uniting of the property of two or more corporations by legitimate reorganization, consolidation or merger" (91 F. Supp. at 17).

Appellant's argument that the decision of this Court in *United States v. duPont & Co.*, 353 U. S. 586 (1957) "put to rest the dictum" in *Arrow-Hart*, is totally unjustified. A reading of *Arrow-Hart* will show that the exclusion of corporate mergers from the impact of section 7 of the Clayton Act was not dictum. Moreover, it does not need argument to show that in the *duPont* case this Court was concerned

only with the question of whether section 7 applied to vertical as well as horizontal stock acquisitions.

Appellant's contention is most extraordinary in view of the fact that the Department of Justice advised Congress in connection with the passage of the Bank Merger Act of 1960 that the stock acquisition clause of the Clayton Act does not apply to bank mergers. Congressional acceptance of this view is evident from the legislative history. In the report of the House Committee on Banking and Currency on the Bank Merger Act of 1960, H. Rep. No. 1416, 86th Cong., 2d Sess. (1960), this statement appears at page 9:

> "Because Section 7 is limited, insofar as banks are concerned, to cases where a merger is accomplished through acquisitions of stock, and because bank mergers are accomplished by assets rather than stock acquisitions, the act offers 'little help,' in the words of Hon. Robert A. Bicks, acting head of the Antitrust Division, in controlling bank mergers."

The chairman of the House Committee on Banking and Currency, Representative Spence, subsequently reaffirmed this statement on the floor during debate on the bill:

> "The Clayton Act is ineffective as to bank mergers because in the case of banks it covers only stock acquisitions and bank mergers are not accomplished that way." (106 Cong. Rec. 7257 (1960)).

In the report of the Committee on Banking and Currency of the Senate on the same Act, S. Rep. No. 196, 86th Cong., 1st Sess. (1959), it is said at page 5:

> "In 1950 (64 Stat. 1125) section 7 of the Clayton Act was amended to correct these deficiencies. Acquisitions of assets were included within the section, in addition to stock acquisitions, but only in the case of corporations subject to the jurisdiction of the Federal

> Trade Commission (banks, being subject to the jurisdiction of the Federal Reserve Board for purposes of the Clayton Act by virtue of section 11 of that act, were not affected)."

And Senator Robertson, chairman of the Senate Committee on Banking and Currency, made the following statement on the floor of the Senate during debate on the bill:

> "In the opinion of the committee it is impossible to subject bank mergers to the simple rule of section 7 of the Clayton Act." (105 Cong. Rec. 8076 (1959)).

The language of Section 7 of the Clayton Act, the Agreement of Consolidation conforming to the national banking laws, the legislative history, and the decision of this Court in the *Arrow-Hart* case, are decisive. The non-applicability of Section 7 of the Clayton Act to the proposed merger should require no further argument before this Court.

II. There Is No Evidence That the Proposed Merger Will Constitute an Unreasonable Restraint of Trade in Violation of Section 1 of the Sherman Act.

The evidence which appellant presented to the district court was basically directed at proving a violation of Section 7 of the Clayton Act, with its test of "reasonable probability", rather than Section 1 of the Sherman Act. Appellant states that "The significance of the present case is that it involves the elimination of substantial and direct competition between the second and third largest commercial banks in the four-county Philadelphia area" (J. S. 19). This is a Clayton Act test, as appellant recognizes (J. S. 29). However, in view of the fact that Section 7 of the Clayton Act is not applicable to the proposed merger, appellant's evidence must meet the "more stringent" requirements of Section 1 of the Sherman Act by "a definite factual show-

ing of illegality". *Times-Picayune Pub. Co. v. United States*, 345 U. S. 594, 609-610 (1953); *Appalachian Coals, Inc. v. United States*, 288 U. S. 344, 377 (1933); *Standard Oil Co. v. United States*, 283 U. S. 163, 179 (1931).[2]

After thorough analysis, the district court found "nothing in this record" to support a finding of a violation of Section 7 under the reasonable probability test of the Clayton Act (J. S. 48a). Therefore the contention that the merger violates the more stringent standards of the Sherman Act does not present a substantial question.

A. *The Mere Elimination of Competition Between Appellees Will Not Constitute a Restraint of Trade.*

The district court found on the basis of all the evidence that "the elimination of one competitor will not result in the lessening of vigorous competition in the commercial banking field" (J. S. 37a), and further, that "the only competent testimony upon the subject establishes that competition will be more vigorous after the merger" (J. S. 40a). The district court's reference to "the only competent testimony" is based not only on the opinions of appellees' experts but on the testimony of officers from eight competing banks in Philadelphia and appellant's only expert who was familiar with Philadelphia banking (Tr. 2378, 3369, 3061-3, 3099-3100, 3191-2, 3238-9, 3274-5, 3453-5, 3551-3, 3845-7, 1608-9).

Despite this testimony and the findings based thereon, appellant continues to argue that the elimination of competition between appellees will constitute a violation of Section 1 of the Sherman Act, relying on the old railroad cases decided by this Court in the early 1920's (J. S. 20-21). Appellant cited these same railroad cases to this Court in

---

2. Appellant itself acknowledges that the quantum of proof required to obtain an injunction under Section 1 of the Sherman Act is much greater than that required under Section 7 of the Clayton Act (J. S. 29).

United States v. Columbia Steel Co., 334 U. S. 495 (1948), where they received the following treatment (334 U. S. at 531):

> "The government cites four antitrust cases involving railroads to support its argument that control by one competitor over another violates the Sherman Act, even though the percentage of business for which they compete may be small. * * * The factual situation in all those cases is so dissimilar from that presented here that they furnish little guidance in determining whether the competition which will be eliminated through the purchase of Consolidated is sufficient to warrant injunctive relief requested by the government."

The railroad cases are even less applicable to the field of commercial banking in the four-county area than they were to the steel industry, particularly when it is recognized that there would still be 41 banks located in the four-county area, an additional 75 in the surrounding six counties, and many others located throughout the United States which also compete in the four-county area (J. S. 30a-31a, 39a; Def. Fdgs. 52, 158, App. 8b-9b, 20b).

Other than the mere fact of the merger, the only evidence in the record upon which appellant relies to justify the extraordinary relief of injunction consists of statistical compilations.[3] While the district court accepted these figures as being arithmetically correct, it refused "to accept

---

3. The three agency reports to the Comptroller of the Currency under the Bank Merger Act of 1960 are evidence only of the fact that the procedures required by the Act were followed. The opinions contained in these reports are based on the same statistics which were introduced in evidence in this case and which are discussed hereafter. Moreover, these opinions, as such, are purely hearsay, since appellant failed to call a single representative of any of those agencies to testify in support thereof and to be cross-examined. See *United States v. International Harvester Co.*, 274 U. S. 693, 703 (1927). The district court concluded that it could not give legal effect to the opinions reached by these agencies since there was not "a single shred of evidence" to support them (J. S. 46a).

the conclusions" which appellant seeks to draw from them (J. S. 7a).

B. *Appellant's Statistics Do Not Constitute Evidence of a Restraint of Trade.*

The statistics upon which appellant relies disclose only the amount of business done by each bank with a head office in the four-county area. As such, they provide no information from which restraint of trade can be inferred.

These figures do not represent market shares and they are in no way comparable to those presented in the anti-trust cases cited by appellant. In the first place, they do not include the business done by the many banks from all over the United States which "solicit business in the Philadelphia area on an intensive and regular basis" and which "derive substantial business from Philadelphia" (Def. Fdg. 52, App. 8b-9b; J. S. 30a-31a). Furthermore, the figures for the banks located in the four-county area include all of their business done outside that area (J. S. 31a; Def. Fdgs. 50-51, App. 7b-8b). For example, 43% in dollar amount of appellees' commercial and industrial loans are made to customers outside of the four-county area, yet appellant includes all of these loans in the percentages which it claims show "concentration" in the four-county area. Such distortions are substantial and led the court to find that (Def. Fdg. 56, App. 9b):

> "Plaintiff has introduced no evidence bearing on defendants' proportion of the entire banking business done within the four-county area by all banks deriving business from that area, in any category of business."

In view of this finding, appellant's attempt to create a substantial question by its repeated use of the word "concentration" is unjustified.

In discussing the "strength of the remaining competition", appellant does not dispute the finding of the district

court that "The commercial banks in Philadelphia today are strong and vigorous competitors in offering commercial banking services to the public" (Def. Fdg. 123, App. 14b). Instead, it argues without reference to the testimony that "the proposed consolidated bank will alter radically the existing competitive situation among all commercial banks with head offices in the four-county area" (J. S. 23, 7). The merger will create a new bank which will be larger than any other in Philadelphia but still considerably smaller than its competitors in New York and elsewhere. This increased size, however, will not give the new bank a competitive advantage in the four-county area except for the large customers whose banking requirements cannot now be met by any local bank (Def. Fdg. 145, App. 18b).

On the basis of the uncontradicted testimony of experienced banking witnesses, the district court found that "Large commercial banks do not have a competitive advantage for business within the range of the resources of smaller banks" (Def. Fdg. 40, App. 6b). This finding reflects the inherent nature of commercial banking and the effect of an intensive scheme of governmental regulation which, as the district court found, has made "convenience, quality of service and personal relationships" the principal factors in competition (J. S. 8a, 22a-24a; Def. Fdgs. 9-43, App. 2b-6b). The testimony of bankers that small banks can compete as effectively as large banks for the customers within the range of their resources was confirmed by the fact that in the last decade virtually all of the banks in the four-county area which are smaller than appellees increased their deposits at a faster rate than did appellees (Def. Fdgs. 110, 113-122, App. 12b-14b). In addition, several of the smaller Philadelphia banks have successfully opened new branches in the center of the City in recent years, and an entirely new bank, established just outside the City limits, has experienced rapid and extensive growth (Def. Fdgs. 111-112, App. 12b-13b). Thus, all of the

testimony and other evidence in the record refutes appellant's argumentative inference that the size of the merged bank will give it a competitive advantage in the four-county area.

Final proof that appellant's statistics are totally lacking in probative value is provided by a comparison with statistics similarly computed for other cities. It was shown, for example, that there are 190 cities out of the 224 in the United States with more than 50,000 population, and 78 cities out of the 110 with populations over 100,000, in which the lead bank has a greater percentage of total bank assets than the merged bank would have in the four-county area (Def. Fdgs. 128-144, App. 15b-18b). These numbers are too large to be ignored.[4] They prove either that appellant's method of computing "concentration" on purely local bank figures is no measure of relative competitive strength or that a restraint of trade presently exists in most of the large cities of the United States. The failure of appellant to produce any evidence which would support the latter alternative, and the affirmative testimony of the former Deputy Comptroller that there is adequate competition in each of these cities, support the district court's finding that "no dangerously potential concentration will result from this merger" (Tr. 3327; J. S. 26a).

As for the trend toward concentration visualized by appellant, which again is a Clayton Act concept, the district court had this to say (J. S. 41a):

> "The competitive situation that exists in the four-county area, with the many alternatives available to a prospective customer, leads to the inescapable conclu-

4. In footnote 15 on page 23 of the Jurisdictional Statement, appellant attempts to dispose of the statistics showing the level of banking concentration in other cities by stating that they were presented without proof of certain surrounding facts which appellant considers to be important. Appellant has overlooked Exhibit D-21, in which these facts are set forth in detail.

sion that any tendency to monopoly or oligopoly at this stage is nonexistent."

The competitive situation in the four-county area to which the district court referred consists not only of the 41 other banks located therein, but also the banks from all over the United States which do business in the four-county area. The district court said, "It was very surprising to learn at the trial of this case that not only New York banks solicit and receive substantial business from customers within the four-county area, but also large banks from all the larger cities in the nation do likewise" (J. S. 30a-31a). The competitive significance of this statement is apparent from the fact that more than 68% in dollar volume of the appellee's commercial and industrial loans are made to, and at least 64% of the appellee's demand deposits from partnerships and corporations are received from, customers whose banking choices include commercial banks located outside the four-county area (Def. Fdg. 52, 9b). Thus, banks from all over the United States, as well as those in the four-county area, will be competing for the major share of the merged bank's business.

In fact, it is the inability of any Philadelphia bank to satisfy the banking needs of the larger local enterprises in the national market which has inspired this merger. Business leaders, competing bankers and city officials uniformly testified that Philadelphia needs a substantially larger bank to accommodate the requirements of its expanding industry, commerce and foreign trade. This is not a matter of "civic prestige", as appellant cynically argues; it is, as the district court found, a matter of importance to local businesses "because of the close contacts which are required between their top officers and the bankers" (Def. Fdg. 176, App. 22b). It is also of importance to appellees, which have been losing local business to larger banks located in other cities including such smaller cities as Cleveland, Pittsburgh, Boston and San Francisco (Def. Fdgs. 178-185, App. 23b-24b).

Although the district court was careful to avoid relying upon these public benefits as a ground for dismissal of the complaint, it nonetheless found that the merger "will definitely benefit the community" (J. S. 34a, 48a).

As opposed to all of this uncontradicted testimony and evidence which support the district court's conclusion that no unreasonable restraint of trade will result from the merger, there is only the appellant's argument that the merger itself will automatically cause a restraint. This unsupported assertion does not raise a substantial question and should not be allowed to delay further this merger which was approved by the Comptroller of the Currency more than a year ago.

CONCLUSION.

For the foregoing reasons, the questions presented by this appeal are unsubstantial and the district court's judgment should be affirmed.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1961

No. 799

UNITED STATES OF AMERICA, APPELLANT

v.

THE PHILADELPHIA NATIONAL BANK and GIRARD TRUST CORN EXCHANGE BANK

On Appeal From the United States District Court For the Eastern District of Pennsylvania

MOTION OF GIRARD TRUST CORN EXCHANGE BANK TO AFFIRM

Pursuant to paragraph 1(e) of Rule 16 of the Revised Rules of this Court, Girard Trust Corn Exchange Bank moves that the judgment of the district court be affirmed, on the ground that the questions on which the decision of the cause depends are so unsubstantial as not to need further argument, because:

1. Section 7 of the Clayton Act does not apply to the proposed merger under the terms of the Act and under settled legal principles enunciated by this Court; and

2. Appellant's failure to prove a violation of section 1 of the Sherman Act appears clearly on the face of the record.

STATEMENT.

Appellees are a national bank and a state bank with headquarters in Philadelphia. On February 24, 1961 the Comptroller of the Currency duly approved the proposed merger of the two banks in accordance with the Bank Merger Act of 1960, 74 Stat. 129, 12 U.S.C. (Supp. II) § 1828(c), but the merger has not been consummated pending the final disposition of this appeal.

Following the Comptroller's approval, appellant filed a complaint in the district court seeking to restrain the merger on the asserted grounds that it would violate section 1 of the Sherman Act and section 7 of the Clayton Act. After a trial the district court entered a judgment dismissing the complaint, and the present appeal ensued.

The record in this case consists of 4,000 pages of testimony and over 300 exhibits accumulated during two months of trial. Detailed requests for findings of fact and conclusions of law and comprehensive briefs were filed and both sides argued the issues orally. The 50-page opinion of the court analyzes all of appellant's contentions, affirms or refuses each one of appellant's 600 requests, and concludes "There is nothing in this record which supports the averments of the complaint. . . ." (J.S. 48a).*

This emphatic conclusion, at the end of such a lengthy trial, accurately reflects the nature of appellant's proof. In the trial court, as in its Jurisdictional Statement here, the appellant placed its primary reliance on mere statistical

* References to appellant's Jurisdictional Statement and Appendix are designated "J.S.". Appellant's and appellees' requested findings of fact which were affirmed by the district court are printed in a Joint Appendix of Appellees. The findings of fact of appellees affirmed by the court are printed at pages 1b to 27b and are designated herein "Def. Fdg.". The findings of fact of appellant affirmed by the court are printed at pages 28b to 77b and are designated herein "Govt. Fdg.". There is also printed as an appendix to this motion, beginning at page 22, a summary of the evidence. References to the transcript of testimony are designated "Tr.".

data which are claimed to demonstrate two things: first, that the four-county area, consisting of Philadelphia and its three contiguous counties in Pennsylvania, is the relevant geographic market; and second, that the merged bank would have a large percentage of the business done by commercial banks which are physically located within that area. From this premise the district court was asked to reach the conclusion that the antitrust laws would be violated by the merger.

Appellant made no serious attempt to show the effect of the proposed merger and of the resulting allegedly undue concentration of assets on the banking or business community either in the four-county area or in any other area. There was likewise no suggestion that a like or greater concentration of banking assets elsewhere has ever produced any adverse effect on competition or on business. There was a total failure to indicate how it might be possible for the merged bank to control loans, deposits, interest rates, availability of credit or any other aspect of banks' activities in Philadelphia or in any other area. The appellant relied merely on the contention, unsupported by testimony or other evidence and contradicted in every material particular by appellees' witnesses, that if certain figures or combinations of figures exceeded a particular amount, a violation of the Sherman and Clayton Acts must have occurred.

The appellant's statistics themselves are so incomplete as to be valueless. They do not even suggest the total volume of banking business done either in Philadelphia or in the four-county area or in any other defined area, nor do they suggest the percentage of such business done either by PNB or Girard. They do not show the amount of business done in the four-county area by banks located elsewhere, nor, while purporting to show local business, do they exclude the business done elsewhere by Philadelphia banks.

Of the three economists whom appellant called to interpret its data (pp. 24-26), two, who had no familiarity with conditions in Philadelphia, and virtually none with banking elsewhere, testified only with respect to their personal theories of banking. The district court found their theories to have been "completely destroyed on cross-examination" and rejected them (J.S. 7a, 36a, 38a-39a). The third economist, the only one acquainted with commercial banking in the Philadelphia area, when asked his opinion whether the merger would have an adverse effect on competition, testified not that competition would be substantially and unreasonably lessened as charged but that "there would still be a considerable amount of competition within the Philadelphia area, knowing the other banks that are doing business following this merger" (Tr. 1609). Appellant's remaining opinion evidence, that of a number of small town bankers who had no knowledge of conditions in Philadelphia (pp. 22-24), was also rejected by the court below (J.S. 7a-8a).

Appellees' proof, on the other hand, included the testimony of a succession of witnesses who were well acquainted with commercial banking in Philadelphia and qualified to gauge the probable effects of the merger. These witnesses included chief executives of seven of appellees' competitors* (pp. 27-28), large and small customers of banking services (pp. 28-31), an economist who had studied Philadelphia banking all his life, a former First Deputy Comptroller of the Currency who also testified on the comparable competitive situation in other cities (pp. 27, 28, 30), and public officials of the City of Philadelphia (p. 30). These witnesses testified that the merger not only would not adversely affect competition in the Philadelphia area but would increase it. The court therefore concluded that,

---

*Appellant called the president of one Philadelphia bank but refused to let him express his opinion on the effect of the merger (p. 24).

although the competition between Girard and PNB would be eliminated by the merger, "the only competent testimony upon the subject establishes that competition will be more vigorous after the merger" (J.S. 40a).

For the purpose of its decision on the facts the district court accepted every legal conclusion advanced by appellant. Thus the court held that the approval of the merger by the Comptroller under the Bank Merger Act did not preclude the application of the antitrust laws (J.S. 12a-17a). In determining as a matter of fact that the Clayton Act was not violated the court assumed that section 7 of the Act was applicable, even though it held to the contrary as a matter of law (J.S. 17a-21a). The court held that commercial banking as a whole was a proper line of commerce or product market, as argued by appellant (J.S. 24a-28a). The court assumed that the four-county area espoused by appellant was the relevant geographic market in which to measure the competitive effects of the merger, even though it held that the relevant market encompassed a much larger area (J.S. 29a-31a). The court assumed that appellant's concentration percentages for the four-county area had significance, even though it adopted a finding of fact as to their invalidity (J.S. 34a-35a; Def. Fdg. 56, p. 9b). Finally, the court analyzed the effect of the merger on competition without including the benefits which would result, even though the court was "convinced that the merger will definitely benefit the community" (J.S. 34a, 48a; Def. Fdgs. 190-207, pp. 25b-27b).

The factual basis for the decision of the court below appears from the opinion (J.S. 46a-47a):

> "The Government has asked this Court, without the production of a single shred of evidence, and on the basis of reports no more illuminating than that of the Comptroller of the Currency, to give legal effect to the conclusions of the dissidents, rather than the Department charged with the responsibility.

"This Court fails to see how any court, without some factual basis being laid therefor, could accede to any such request and this is all the more true in this particular case where experienced, substantial bankers throughout this entire area have appeared in open court, subjected themselves to searching cross-examination, and have unanimously demonstrated that the proposed merger would not cause an undue concentration of banking, would not tend toward a monopoly, and definitely would increase the vigor of competition which the Congress of the United States from the passage of the Sherman Act down to the present date has, by law, attempted to foster."

The trial judge accordingly concluded on the basis of the entire record before him that appellant had failed to prove any violation either of section 1 of the Sherman Act or of section 7 of the Clayton Act, even assuming its applicability.

ARGUMENT.

Summary of Argument.

In order that the judgment of the court below be affirmed, it is necessary to conclude only that: (1) section 7 of the Clayton Act is inapplicable and (2) appellant has failed to prove that the proposed merger of these two Philadelphia banks will constitute a violation of section 1 of the Sherman Act. These propositions are so clearly correct that further argument before this Court is unnecessary.

The inapplicability of section 7 of the Clayton Act is established by the plain language of the Act, by this Court's opinion in *Arrow-Hart & Hegeman Elec. Co.* v. *Federal Trade Commission*, 291 U.S. 587 (1934), by the legislative history of the amended Act and of the Bank Merger Act of 1960, and by opinions of former Attorneys General.

With respect to section 1 of the Sherman Act, this Court has held that an injunction should be granted only upon "a definite factual showing of illegality." *Appalachian Coals, Inc.* v. *United States*, 288 U.S. 344, 377 (1933); *Times-Picayune Pub. Co.* v. *United States*, 345 U.S. 594, 622 (1953). As opposed to this standard, the district court has found that "there is nothing in the record" and, again, there is not "a single shred of evidence" which supports the averments of the complaint (J.S. 48a, 46a). The findings of the trial court should not be set aside unless clearly erroneous. F. R. C. P. 52(a).

The pendency of bank merger cases in cities other than Philadelphia does not require a full hearing of this appeal. The appellant simply failed to prove its case with respect to Philadelphia, in which the banking situation is different than it is elsewhere. Other cases will not be decided by the failure of proof here.

On the basis of testimony of representative bankers, businessmen, and the Mayor of Philadelphia, the district

court found that the proposed merger would increase banking competition in and be of definite benefit to the Philadelphia area and would not lessen banking competition anywhere. Accordingly affirmance of the judgment will promote the purposes of the antitrust laws.

I. Section 7 of the Clayton Act is not Applicable to the Proposed Merger.

Section 7 of the Clayton Act, as amended by the Celler-Kefauver Anti-Merger Act of 1950, 64 Stat. 1125, 15 U.S.C. § 18 (1958), provides in pertinent part:

> "No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly."

Banks are not "subject to the jurisdiction of the Federal Trade Commission". Federal Trade Commission Act § 5(a)(6), 38 Stat. 719, as amended, 15 U.S.C. § 45(a)(6) (1958). Thus section 7 applies only to stock acquisitions by banks and not to asset acquisitions.*

The proposed merger is to take place pursuant to section 215 of the national banking laws, 73 Stat. 460, 12 U.S.C. (Supp. III, 1962) § 215, which provides in subsection (e):

> "The corporate existence of each of the consolidating banks or banking associations participating in

* Under the Bank Merger Act the Comptroller of the Currency approved this merger and the Federal Reserve Board had merely an advisory function. If bank mergers such as this constitute stock acquisitions, the Federal Reserve Board would also have had authority under Section 11 of the Clayton Act, 38 Stat. 734, as amended, 15 U.S.C. § 21 (1958), to set aside the merger.

such consolidation shall be merged into and continued in the consolidated national banking association and such consolidated national banking association shall be deemed to be the same corporation as each bank or banking association participating in the consolidation. All rights, franchises, and interests of the individual consolidating banks or banking associations in and to every type of property (real, personal, and mixed) and choses in action shall be transferred to and vested in the consolidated national banking association by virtue of such consolidation without any deed or other transfer."

In its effort to have section 7 of the Clayton Act applied to this merger, appellant argues that the merger involves first an acquisition of stock and then an acquisition of assets (J.S. 31). This, however, is directly contrary to the facts. Both the language of section 215(e), quoted above, and the terms of the agreement between the two banks show that the proposed merger does not involve an acquisition of stock (J.S. 17a-21a; Def. Fdg. 8, p. 2b).

Appellant's argument is also in conflict with well settled principles. In *Arrow-Hart & Hegeman Elec. Co.* v. *Federal Trade Commission,* 291 U.S. 587, 596, 598-9 (1934), this Court construed the same language which appellant seeks to invoke here and ruled that a merger is not an acquisition of stock under section 7 of the Clayton Act. Although the decision of that case was by a divided court, the dissenting opinion of Mr. Justice Stone agreed (at p. 600) that "It is true that the Clayton Act does not forbid corporate mergers . . ."

A subsequent attempt by appellant to attack a merger as a stock acquisition under section 7 of the Clayton Act was rejected by the District Court for the Southern District of New York, following "the clear mandate of the Arrow-Hart decision." *United States* v. *Celanese Corp.,* 91 F. Supp. 14, 16 (S.D. N.Y. 1950). In that case it was

said (at p. 17) that "Section 7 was not intended to apply to the acquisition by one corporation of the assets of another or the open uniting of the property of two or more corporations by legitimate reorganization, consolidation or merger."

Although the language of section 7 which this Court construed in the *Arrow-Hart* case was not changed by the 1950 amendment, and the additional clause relating to asset acquisitions was made inapplicable to banks, appellant now seeks to argue that section 7 has always applied to mergers as well as to stock acquisitions, relying on a quotation from *United States* v. *duPont & Co.*, 353 U.S. 586, 590 (1957) (J.S. 30). This Court decided in the *duPont* case only that section 7 had always applied to vertical as well as horizontal stock acquisitions. The decision had nothing to do with the holding of the *Arrow-Hart* case that a merger is not a stock acquisition within the meaning of the section.

Appellant's present argument is contrary to the position the Department of Justice has consistently taken since 1950. In the course of unsuccessful efforts to persuade Congress to amend the Clayton Act to accomplish the result which the appellant now seeks to achieve by means of a decision of this Court, Attorneys General have repeatedly stated to Congress that section 7 does not apply to bank mergers.* For example, during the first hearing

* *Hearings Before a Subcommittee of the Senate Committee on Banking and Currency on the Financial Institutions Act of 1957, 85th Cong., 1st Sess., Part 2,* at 1030, 1033 (1957); *Hearings Before the Antitrust Subcommittee of the House Committee on the Judiciary, 85th Cong., 1st Sess., Ser. 2,* at 13, 49, 72 (1957); *Hearings Before the Antitrust Subcommittee of the House Committee on the Judiciary, 84th Cong., 1st Sess., Ser. 3, Part 1,* at 244, 266 (1955); *Hearings on S. 3911 Before a Subcommittee of the Senate Committee on Banking and Curreney, 84th Cong., 2d Sess.,* at 61, 66 (1956); *Hearings Pursuant to S. Res. 231 Before the Subcommittee on Antitrust and Monopoly of the Senate Committee on the Judiciary, 85th Cong., 2d Sess.,* at 182 (1958); *Hearings on S. 1062 Before the Senate Committee on Banking and Currency, 86th Cong., 1st Sess.,* at 9 (1959).

cited in the footnote, Attorney General Brownell, speaking of bank mergers, told the Senate Committee on Banking and Currency that:

> "On the basis of these provisions the Department of Justice has concluded, and all apparently agree, that asset acquisitions by banks are not covered by section 7 as amended in 1950."

Even more significantly, in passing upon an application for informal clearance of a bank merger in 1955, the Department of Justice stated:

> "After a complete consideration of this matter, we have concluded that this Department would not have jurisdiction to proceed under section 7 of the Clayton Act. For this reason this Department does not presently plan to take any action on this matter."*

Congress itself has recognized that the stock acquisition clause of the Clayton Act does not apply to corporate mergers. The reports on the 1950 amendment of section 7 of the Act stated that the addition of the clause dealing with the acquisition of assets was necessary to change the existing law, which failed to prohibit acquisitions of assets by merger or otherwise. *H. Rep. No. 1191, 81st Cong., 1st Sess.*, 5, 11-12 (1949); *S. Rep. No. 1775, 81st Cong., 2d Sess.*, 2 (1950). The House Report said at page 12 with respect to the decision in the *Arrow-Hart* case:

> "Since the Commission could take action only against those asset acquisitions that were preceded by stock acquisitions, the possible reversal of decisions would in no way give the Commission the power to prevent those acquisitions of assets which do not involve the transfer of stock. No one has ever contended that the

* *Hearings on Current Antitrust Problems Before the Antitrust Subcommittee of the House Committee on the Judiciary, 84th Cong., 1st Sess., Ser. 3, pt. 3,* at 2141 (1955).

[illegible] under any possible construction of sec- [illegible] the power to prevent this latter type of [illegible]

[illegible] legislative history of the Bank Merger Act of [illegible] reveals Congress' view that section 7 is in- [illegible] to bank mergers. In the report of the House [illegible] on Banking and Currency, *H. Rep. No. 1416, [illegible] Sess.* (1958), it is said at page 9:

"[illegible] section 7 is limited, insofar as banks are [illegible], to cases where a merger is accomplished [illegible] acquisition of stock, and because bank mergers [illegible] accomplished by asset acquisitions rather than [illegible] acquisitions, the act offers 'little help,' in the [illegible] of Hon. Robert A. Bicks, acting head of the [illegible] Division, in controlling bank mergers."

[illegible] report of the Senate Committee on Banking and [illegible] on the same Act, *S. Rep. 196, 85th Cong., 1st [illegible]*, it is said at page 5:

"[illegible] (64 Stat. 1125) section 7 of the Clayton [illegible] was amended to correct these deficiencies. Ac- [illegible] of assets were included within the section, [illegible] to stock acquisitions, but only in the case [illegible] subject to the jurisdiction of the [illegible] Trade Commission (banks, being subject to [illegible] jurisdiction of the Federal Reserve Board for [illegible] of the Clayton Act by virtue of section 11 [illegible] Act, were not affected)."

[illegible] of the foregoing appellant's contention with [illegible] to the applicability of section 7 of the Clayton [illegible] and does not require further argu- [illegible] this Court. More especially is this so since [illegible] court assumed *arguendo* that the Clayton Act [illegible] and then found as a fact that it had not [illegible]

II. Appellant's Failure to Prove a Violation of Section 1 of the Sherman Act Appears Clearly on the Face of the Record.

Appellant's evidence was directed not to the extent or nature of existing competition or the effect the proposed merger would have on it, but merely to the total volume of the merged bank's business. Relative concentration of banking business following the merger was shown in the abstract, without any evidence that such concentration would adversely affect competition or that greater concentration, which was shown to have existed elsewhere for many years, has ever had that effect. Essentially appellant complains that the district court did not find, contrary to the only credible evidence in the case, that the numerical relationships that would exist after the merger would inevitably lessen competition and tend to create a monopoly in commercial banking in Philadelphia.

By calling the banks involved "two giant banks" (J.S. 22), by repeating the words "concentration" and "undue concentration," and by calling the business expected to be done by the merged bank "controlled" (J.S. 22), appellant obscures the absence of any evidence that the merged bank would in fact be able to control or limit the availability of credit or banking services in any way in any defined area, or affect in the slightest degree the ability of all banking customers in any area to obtain any banking accommodation they wish. By professing to find the antitrust laws rendered "impotent" by the decision of the district court (J.S. 13), appellant distracts attention from the affirmative evidence on which that decision was based and which shows that the merged bank itself would be impotent to impose its will on any other bank or on any customer of a bank, would be totally unable to restrict the freedom of action of its competitors or their customers, and would be wholly without power, either actual or potential, to lessen

competition or to create a monopoly even if it desired to do so (J.S. 36a-37a, 40a-41a). It was because the district court looked beyond the mere verbal characterizations offered by appellant that it was able to find, on the basis of the extensive evidence presented by the appellees (pp. 27-31), that competition not only would not be lessened but would actually be increased by the merger (J.S. 37a-39a).

Theories are no substitute for facts; mere labels do not supply a sound foundation for a court's judgment. Concentration in banking, great or small, without evidence of its effect, if any, on competition is meaningless. Appellant suggests no standard against which the size of banks may be measured in order to determine their ability to affect competition. Ratios alone do not furnish a reliable test for the power of banks to compete with one another. Violation of section 1 of the Sherman Act does not exist nor does competition in banking inevitably disappear and a tendency toward monopoly arise merely because one bank out of 41 is larger than any of the others in the Philadelphia area. All this has been made abundantly clear by *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 527-8 (1948) and by *Tampa Electric Co.* v. *Nashville Coal Co.*, 365 U.S. 320 (1961), to name but two cases, and yet appellant seeks to prevent this merger merely because the merged bank will have a particular position in an arbitrary scale.

Whatever mere size may mean in any other business or whatever ability to control or influence the market size may have elsewhere, it has no such quality in banking because of the nature of that industry. Banks are dependent for funds with which to operate on the will, or whim, of their depositors. They do not own the funds they lend, they owe them, and are regulated to such an extent that competition among banks is, for practical purposes, restricted to service and limited by their capacity, closely controlled by law and regulation, to meet the requirements of the customer (J.S. 8a, 22a-24a; Def. Fdgs: 9-37, pp. 2b-5b).

Words and phrases used to describe competitive conditions and activities in manufacturing and selling are inapplicable to banking and their uncritical use is merely misleading. An example of this is the appellant's reference (J.S. 24) to "economic power and influence" of banks competing for modest loans as if that were a product of a bank's size. The record in this case clearly established this not to be the fact and the district court so found (J.S. 36a-37a).

Concentration* in banking is referred to as if it were something evil in itself, and yet no attempt was made to give it a precise meaning or even to show how it is harmful. Many cities were shown to have banks with greater percentages of local banking resources than the merged bank would have (Def. Fdgs. 132-139, pp. 16b-17b), yet not a word of testimony was offered to indicate that competition has been lessened in any such city. Appellant brought witnesses from small towns as far west as California to tell of their limited experience in banking (pp. 22-24), but offered not a single witness from any of the cities with concentration in banking equal to or greater than that predicted for Philadelphia to describe the effect, if any, of that concentration. Merely calling concentration "undue" (J.S. 25) proves nothing without evidence that the concentration complained of has lessened competition in the past or may be expected to do so in the future.** There was no such evidence in this case and there was much the other way (p. 30). There is simply no substance to appellant's assertions that the allegedly undue concentration proves something.

* As generally used by appellant the term "concentration" appears to mean the percentage of banking resources in a particular locality held by a bank or banks. See Govt. Fdgs. 374-384, pp. 64b-66b.

** One of the few available studies of banking competition is found in the Annual Report of the Federal Deposit Insurance Corporation for 1960 (Ex. D-48). That report says (at p. 59) that ". . . there is no fixed relationship between changes in concentration and changes in competition."

All that appellant's argument really amounts to is that the competition presently existing between PNB and Girard would be eliminated (J.S. 19). That this alone is not enough is shown by *Appalachian Coals, Inc.* v. *United States*, 288 U.S. 344, 360 (1933), *United States* v. *Columbia Steel Co.*, 334 U.S. 495 (1948) and *Erie Sand & Gravel Co.* v. *F. T. C.*, 291 F.2d 279, 283 (3rd Cir., 1961).* The elimination of the competition between PNB and Girard would be significant only if this might have some adverse effect on the ability of the public to obtain proper banking accommodation. The evidence clearly shows that it would not. Not only will there still be 41 banks in the Philadelphia area after the merger, but three was the largest number of alternate choices said by any witness to be necessary to provide every competitive advantage to a prospective borrower, and the district court so found (J.S. 39a; Def. Fdg. 159, p. 20b). Obviously the other major customer, a depositor, can go anywhere.

The merger would reduce the number of Philadelphia banks able to lend more than $5,000,000 from three to two (J.S. 39a). However, for the first time a Philadelphia bank would be able to lend more than $8,000,000 and thus compete with the many banks in other cities, particularly New York, which are taking from Philadelphia business that Philadelphia banks cannot now handle (J.S. 48a). The evidence shows that for loans over $1,000,000 a borrower can and frequently does go to a bank in some city other than Philadelphia and that New York banks are constantly seeking and obtaining business in Philadelphia (Def. Fdg. 52, pp. 8b-9b; J.S. 30a-31a). Barring the proposed merger would accordingly have no appreciable impact on competition in the Philadelphia area but would effectively prevent the creation of competition which does not now exist

* The railroad and coal cases relied on by appellant (J.S. 20-21) were not considered controlling even in *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 531 (1948) and they have no application here.

and would preserve for the benefit of the larger banks in New York and elsewhere the substantial volume of large business which no Philadelphia bank is big enough to do (J.S. 48a). Although professing to be concerned lest the proposed merger lessen competition, what the appellant is seeking would actually stifle competition, not preserve or increase it.

The statistics furnished by the appellant fail to give the most elementary data necessary to determine the effect of the merger in any market, even the four-county area urged by appellant. There is nothing to show the total volume of banking business done within that area, or the percentage of that business done either by PNB or Girard (Def. Fdg. 56, p. 9b). There likewise is nothing to indicate the business done within the area by banks outside it or the total banking needs of customers, both within and without the area, who look to banks within it for their banking accommodation. The percentage of PNB's or Girard's own business done within the area signifies nothing with respect to competition unless there is also shown what percentage of the total business done in the area is done by each of those two banks. The fact that Philadelphia banks may establish branches only in the four-county area sheds little light on banking competition in that area (Def. Fdg. 48, p. 7b). Appellant's statistics, limited to the four-county area to show the largest possible percentage of certain types of business, are incomplete and misleading and may not validly be related to the percentages considered in the industrial and commercial cases on which appellant relies (J.S. 19 fn. 14, 20-21).

Appellant complains that the district court did not accept the views given to the Comptroller by the Attorney General, the Federal Reserve Board and the Federal Deposit Insurance Corporation (J.S. 20); but the district court considered them and concluded that they were an inadequate substitute for the evidence in the case (J.S. 45a-47a).

The statement that the proposed merger will alter the existing competitive situation (J.S. 7, 23) gains no strength from repetition. Appellant's proof simply fails to provide any basis for an informed finding that the proposed merger would lessen competition. Its attempt to sustain its burden in this regard failed* (J.S. 6a-8a) and the district court accepted instead the testimony of appellees' informed and experienced witnesses that competition would be increased by the merger. This evidence came from businessmen and bankers of the area who were best able to express an opinion on the subject (pp. 27-30).

The chief executives of seven smaller competitors of appellees testified that the increased size of the merged bank will not affect their ability to compete after the merger. Their testimony was unanimously supported by businessmen of the area and was contradicted by no one (pp. 27-30).

Expert opinions that the merger would not adversely affect competition were expressed both by an economist who was fully acquainted with commercial banking in Philadelphia and Pennsylvania and by a former First Deputy Comptroller of the Currency, who had comprehensive knowledge of banking conditions throughout the United States (pp. 27-28, 30).

The evidence demonstrates that past mergers have not affected the ability of commercial banks of all sizes in Philadelphia to compete effectively and to grow (Def. Fdgs. 108-122, pp. 12b-14b). Appellant emphasizes (J.S. 7) the fact that the number of commercial banks with head offices in the four-county area has diminished in the last 15 years. Appellant offered no evidence that the earlier number was the proper number or that the present number is inadequate. Appellant's only expert witness who was fa-

* This is a "not uncommon form of litigation casualty, from which the government is no more immune than others." *United States v. Yellow Cab Co.*, 338 U.S. 338, 341 (1949).

miliar with banking in the Philadelphia area testified that these mergers resulted from the needs of the four-county area and of its banks and were beneficial to the community and that competition is more vigorous now than it was 10 years ago (pp. 25-26).

Appellees' witnesses uniformly and emphatically stated that concentration *per se* is without significance and has no effect on banking competition or the ability of banking customers to obtain accommodation. Percentages for other cities show that even after the merger Philadelphia would rank far below the top of the list in the share of total bank assets held by its largest or its five largest banks (Def. Fdgs. 132-139, pp. 16b-17b). It was testified that each one of these other cities enjoys the benefits of vigorous banking competition, and there is not one word of testimony to the contrary (p. 30).

Appellant has ignored the essential fact, recognized by its only qualified expert witness (pp. 25-26), as well as by appellees' witnesses, that the growth of banks by merger is largely a product of the demand of larger business enterprises for increased banking accomodation, which has far outstripped the banks' natural growth. Appellant's suggestion that appellees are large enough for the business available (J.S. 25 fn. 18) was refuted by the evidence and rejected by the district court (J.S. 48a; Def. Fdgs. 177-180, pp. 22b-23b). Appellees showed the effect that larger resources would have, not only on the ability of the merged bank to attract and serve large customers in its own area, but also on its ability to continue to serve adequately expanding business customers of all sizes. They demonstrated the present need for a bank large enough to meet the requirements of the large enterprises and particularly the smaller expanding ones within the Philadelphia area (Def. Fdg. 179, p. 23b). It was also shown that a merger is the only feasible manner of achieving this result (p. 31; Def. Fdg. 189, p. 25b).

The fundamental theory of the appellant would result in banks being kept small irrespective of the demands made upon them. The incapacity of Philadelphia banks to care for the business needs of the community has produced a great flow of banking business to New York (pp. 29-30). The far greater size of New York banks makes it impossible for any Philadelphia bank to compete with them adequately for large business. If appellant's purpose in this case is accomplished that disparity will be preserved and the development of a healthy competition between New York and Philadelphia will be prevented.

The proposed merger is the first major effort to provide a Philadelphia bank which can be truly competitive with the larger banks in New York and other cities. The record shows how many cities smaller than Philadelphia have larger banks (Def. Fdgs. 181-182, pp. 23b-24b) which presently draw business from the Philadelphia area. To prevent the creation of a bank which could offer real competition in this field is to defeat, not to promote the purposes of the antitrust laws. This is particularly indefensible in the absence of any evidence whatever that local competition will be served thereby. All demands for smaller accommodation can be met more than adequately by the banks which will continue to serve the area after the merger. Demands for larger accommodation can be met for the first time in Philadelphia by the merged bank, competitively with large banks elsewhere. The evidence shows and the district court found that the only effect that preventing the merger will have on competition will be to inhibit it (J.S. 48a).

CONCLUSION.

There is no significant question presented by this appeal which requires review. The fact that the decision of the district court is the first ruling in a case brought

by the appellant to restrain a proposed bank merger does not change its inherent character. The decision was based on an evidentiary determination of the particular facts of this specific case following a thorough analysis of extensive evidence. That appellant's theories were found to be unsupported even by appellant's own evidence deprives those theories of any significance here.

The decision of the district court was a necessary consequence of appellant's failure to prove its case. The judgment below is correct, and there is no question which requires further consideration.

Respectfully submitted,

PHILIP PRICE

Attorneys for Appellee

Girard Trust Corn Exchange Bank

SUMMARY OF EVIDENCE.

To support its contentions the appellant called as witnesses nine bankers unconnected with the appellees, of whom only one, Sienkiewicz (Tr. 2051), knew anything about Philadelphia and only one other, Brumbaugh (Tr. 643), knew anything about Pennsylvania. A third, MacMillen (Tr. 1217), was familiar with practices in New York, but the other six, all from small communities, were totally ignorant of conditions in Philadelphia and were apparently called mainly because of their opposition to mergers as such, which is the party line of the Independent Bankers Association (Ex. G-66), and their desire to participate in any anti-merger activity (Tr. 742, 744, 747-749).

Of these witnesses Clarke, president of Citizens Union Bank and Trust Co., of Lexington, Kentucky, population 125,000 (Tr. 376), said that there are five commercial banks in Lexington, a number which he considered ample since customers may go where they choose (Tr. 376, 393).

Forlines was president of the Bank of Granite, Granite Falls, N. C., population 3,000 (Tr. 401, 424), which, in spite of competition from larger banks, has quadrupled its assets in the last ten years (Tr. 426, 428). His business experience was revealed by his statement that no one in his area would know what to do with a million dollars (Tr. 430).

Brumbaugh was president of the First National Bank of Claysburg, Pennsylvania, population 3,000 (Tr. 643, 676). He had not supervised any merger of Philadelphia banks while he was Secretary of Banking (Tr. 676) and declared himself not qualified to express an expert opinion on the proposed merger (Tr. 658, 664, 669-671). His definition of a monopoly was four or five banks controlling the whole State of Pennsylvania (Tr. 693) and he did not consider that the proposed merger would affect banking in Pennsylvania to any great extent (Tr. 665). He also

took the defeatist view that there would be no benefit from the merger since New York banks were so much larger (Tr. 681).

DuBois, president of the First State Bank of Sauk Center, Minn., population 3,500 (Tr. 728), headed a family owned bank which has prospered in competition with a large bank (Tr. 730-732). He believed that a borrower should have at least two banking alternatives (Tr. 725) since there would be no monopoly with two banks in vigorous competition (Tr. 732). Having sat in the courtroom for a week he declared himself sufficiently well educated to express an opinion about banking in Philadelphia (Tr. 722).

Hansen was president of the Bank of Union County, Elk Point, S. D., population 1,500, which has a lending limit of $40,000 (Tr. 733, 743). He conceded that nearly half of the IBA banks are the only bank in town (Tr. 746) and said that officers and employees of small banks were bewildered when acquired by merger (Tr. 745-746).

Harding, president of the First National Bank of Pleasanton, Cal., population 4,000 (Tr. 1041), runs a family owned bank (Tr. 1003, 1022). Although his bank takes business from and competes vigorously with a branch of the Bank of America in Pleasanton (Tr. 1013, 1024, 1029, 1031) and has grown substantially in the last ten years (Tr. 1023), he said that competitive banking meant competition with another independent bank without interference from a large number of competitors nearby (Tr. 1020). His opinion was that there would be no monopoly with six banks in a city (Tr. 1037).

Taylor was president of the Waukesha State Bank, Waukesha, Wis., population 30,000 (Tr. 1280, 1304). Although not familiar with loan business in Philadelphia (Tr. 1287) and unable to indicate how the merger of PNB and Girard would restrict competition, except by eliminating one bank (Tr. 1303), he considered that the PNB-

Girard merger would have an effect in his area (Tr. 1300-1301). His bank has grown in competition with a much larger bank (Tr. 1306-1307).

MacMillen, former president of Colonial Trust Co., New York, testified about his experiences in New York but did not know the volume of business done by New York banks in the Philadelphia area or the banking needs of that area (Tr. 1245-6). His bank had competed successfully for loans during the period of mergers of large New York banks (Tr. 1273-4). He agreed that there is no rate competition for large borrowers (Tr. 1260-1) and that prime customers cannot be charged more than the prime rate (Tr. 1257). He also recognized the undesirability of making loans up to a bank's lending limit and agreed that a bank with a larger lending limit and more capital could take a greater risk and therefore lend more than could a small bank (Tr. 1267-9).

The last banker called was Sienkiewicz, president of Central Penn National Bank, the only Philadelphia banker of the nine. He testified that competition from New York is very strong (Tr. 2064). He said that his eighteen branches are important to maintain his bank's competitive position since it has to serve its customers wherever they are, that size is immaterial in competition for deposits, that competition in Philadelphia is keener than it used to be when there was a larger number of banks (Tr. 2057, 2063-4), that there is no price competition for loans (Tr. 2060-1, 2073-5) and that service charges are not an important factor (Tr. 2059, 2065-8). His bank's business comes from the Philadelphia area, including New Jersey (Tr. 2062). The appellant was unwilling to disclose Sienkiewicz's opinion about the proposed merger (Tr. 2062, 2075-6).

The bankers whom the appellant called furnished no support for its charges and theories.

In addition to the bankers the appellant called three professors, who likewise failed to give any support to the appellant's contentions.

Professor Smith, of the University of Michigan, had no business experience (Tr. 434-446) and had made no prior study of banking in the Philadelphia area (Tr. 555). He relied not on data about Philadelphia but on national figures (Tr. 504, 519, 523, 530, 532). He was uninformed about the Philadelphia area and had no basic information about banks or banking in the four county area (Tr. 555-62). In reaching his conclusion he discussed the problem not with any Philadelphia banker (Tr. 562) but with other professors and researchers (Tr. 550-3). On the basis of assumptions, without regard to the facts (Tr. 565-6, 3953, 3992) and rejecting the evidence of Ex. D-26, D-40 and D-43 (Tr. 3935, 3971-2, 3976-7, 3984) he sought to determine the effect of the larger loan limit of the merged bank on the availability of credit in Philadelphia (Tr. 564, 565, 571, 581-2, 3984, 3992). Relying on an algebraic formula (Ex. G-60), which was "kind of hard to follow" (Tr. 583), he concluded that the increased lending limit of the merged bank would not increase loanable funds but that the reverse would occur (Tr. 616, 3942, 3951, 3953, 3960-1). He had never traced the disposition of a large loan or participated in making one (Tr. 3943, 3946), and his conclusion was dependent on the assumption that 97% of the proceeds of local loans resulting from new credit lines would leave the area (Tr. 3980). He indicated that his mission was merely to refute the contention of the banks made in the Application to the Comptroller (Ex. G-57) that the larger lending limit of the merged bank would bring additional funds into and therefore benefit the Philadelphia area (Tr. 3951).

Professor Keith, of the University of Pennsylvania, had made a study of branch banking in the four-county area in 1956 and 1957 (Tr. 1539, 1541). Unlike the two other professors, he had based his study largely on discussions with bankers in the four-county area (Tr. 1569). He concluded that mergers resulted from the need for

...ng facilities in the surrounding counties ... the small suburban banks were unable ... competition (Tr. 1614-16) and that mergers ... the community and had increased com... (Tr. 1616-8). He said that banks ... national market must keep up with the ... in other cities (Tr. 1619) and that there ... lending capacity because banks could not ... the growth of business (Tr. 1624-5). He ... price competition a major factor among ... banks, and that mergers with Philadel... increased the competition in the three ... (Tr. 1631) and conceded that a ... number of competing banks need not ... competition (Tr. 1639). He said that the ... of PNB and Girard do not overlap ... that a considerable amount of competi... would still exist after the proposed ...

... of Northwestern University, was ... in opposition to the bank merger two ... had any opinion on the subject (Tr. ... and qualified as an expert on banking ... (Tr. 1725-7). He based his opinion on ... (Tr. 1728) and discussions with teachers and ... directors, but had none with any bankers ... in Philadelphia (Tr. 1732-35). He adopted ... approach, being wholly ignorant of condi... (Tr. 1736-8, 1822-4, 1826-30, 1832, ... 1834, 1836, 1838-9). His testimony was ... unreliable (Tr. 1871-6, 1887-91) and he ... discredited (Tr. 1882, 1884, 1902-4, 2030, ...). The appellant displayed so little con... that he was called upon at an ... hearing to request findings of ... and 60b.

The other witnesses called by the appellant were officers of the two banks: Beadle testified about branches (Tr. 804); Worstall, branches (Tr. 1041); Ridgway, service charges (Tr. 1124); Gillam, service charges (Tr. 1308); Beatty, credit information (Tr. 1316); Potts, general operations of PNB (Tr. 1331); Satterfield, consumer credit (Tr. 2079). Their testimony was in the nature of discovery, and much of it had little or no relation to the issues in the case.

This was the testimony offered by the appellant. Its additional evidence consisted of quantities of statistics in the form of exhibits showing numbers, amounts and percentages, the volume of selected classes of business from various selected areas, the number and location of branches and their volume of business, service charges, interest rates and other incidental items, and the supposed relative position of PNB and Girard in various classes of loans, deposits, assets, sources of business and other miscellaneous bases of comparison. There were also numerous letters, memoranda, papers, reports and other documents which were identified and offered in evidence, and most of which were never referred to again.

The appellees' evidence, after explaining the background of and the need for the merger, was directed toward two propositions: (1) competition would not be lessened by the merger in the Philadelphia area and competition presently non-existent would be created beyond that area; and (2) the resulting increase in concentration is both reasonable and necessary to provide business in the Philadelphia area with the banking accommodation to which it is entitled but which now it has to seek elsewhere because Philadelphia banks are too small to supply it.

To sustain the first proposition the appellees called thirteen witnesses, all experienced in Philadelphia banking. Brown is president of Girard and two, MacLaren and McDowell, are vice presidents of PNB. One of the other

ten, Harris, a public banking official, has had very wide banking experience and has been teaching banking for forty years (Tr. 2277-85). Another, Jennings, after twenty years as a national bank examiner and twelve years as a deputy comptroller of the currency, became First Deputy and served as such for eight years, during which time he considered over eight hundred mergers and their effect on competition and the local banking community (Tr. 3281-99, 3404-6). Of the remaining eight one is a vice president and seven are presidents or chief executive officers of other local banks. They testified that the merger is needed in Philadelphia and is in the public interest, that it would benefit local banks and could not harm them or their customers, could not affect interest rates, would be of advantage to the community generally, would meet more of the needs of large customers and keep business in Philadelphia that now goes to New York, would create competition for banks in New York and other cities that does not now exist, and would increase competition locally. They also testified that the banking alternatives available after the merger would be ample to meet all the needs of the community, since all banks must satisfy the requirements and desires of all classes of customers within the limits of the banks' resources. They also said that the past mergers were needed and increased competition, and they made it clear that the increased resources of the merged bank are necessary to provide adequate banking service to the community.

In support of the second proposition appellees called nine witnesses. Seven of these are executive officers of large business enterprises, all but one having their main offices in the Philadelphia area: Bradshaw, Atlantic Refining Co., and also president of the Philadelphia Chamber of Commerce; Merriwether, Rohm & Haas Co.; Andrews, Triangle Publications; Amsterdam, Bankers Securities Corporation; Wilson, Sun Oil Co.; Deasy, Automotive

Rentals, Inc.; and Oakes, Pennsylvania Power & Light Co. Graves was Executive Vice President of the Philadelphia Industrial Development Corporation, a non-profit company formed by civic leaders and the city to foster industrial development; and Dilworth was Mayor of Philadelphia.

These witnesses testified that it is essential to the well-being and proper development of an industrial area that its banks should keep pace with the growth of its businesses, but that Philadelphia banks have not done so and thus are unable to serve local business adequately. They showed how the inadequate resources of Philadelphia banks have prevented the banks' full development, explained the added services that the larger New York banks are able to give, the needs of local business, medium size and large, for a substantially larger bank than any now in Philadelphia, the additional business that they would give the merged bank, with their preference for doing banking business in Philadelphia, and their present necessity for seeking accomodation in New York. They stated their unwillingness to obtain large loans, which individual New York banks can readily handle alone, by seeking to combine the lending capacity of several Philadelphia banks, and their refusal to do their banking business in a way they consider unsatisfactory. They confirmed the extent to which local business is solicited by banks in New York and elsewhere and the amount of local business that goes to New York. They indicated how much larger deposit balances they could and would maintain in a Philadelphia bank large enough to supply the needs which cannot now be furnished locally, explained why neither customers nor banks are willing regularly to make loans up to the limit of the banks' lending capacity, and why customers require a bank with a lending limit greater than their currently anticipated needs. They showed that the limited lending capacity in Philadelphia is driving banking business to other cities, why they want a bank in Philadelphia large

enough to enable them to do more banking business at home and how they expect additional banking business to be brought to Philadelphia by the merged bank.

Graves and Dilworth explained the need for the merged bank in terms of the economic and political requirements of the Delaware Valley. They elaborated on the disadvantage the city suffers by its present dependence on New York for financial accomodation.

The testimony of Harris and Jennings, supplemented by exhibits, explained the nature of bank competition and its essential difference from that engaged in by manufacturing and selling companies, showed that other mergers have had no adverse effect on small banks, that small banks can compete effectively with large banks, that competition has been keener in Philadelphia after the mergers of the last few years than before, that small banks, particularly in the Philadelphia area, have grown more rapidly than the large banks, that the largest banks in a community have difficulty in maintaining their relative size, that increased concentration in large banks is offset by the growth of smaller banks, that banks should be large enough to serve local business needs but that Philadelphia banks, lagging behind business, have failed to grow rapidly enough to do this, that banking concentration is considerably lower in Philadelphia than in most other cities, that the banking concentration which the merger would produce would not be excessive and that adequate banking competition exists and businesses are adequately served in cities with far higher banking concentration than there would be in Philadelphia after the merger. Jennings said also that in his experience increased banking concentration is the natural result of a need for additional banking accomodation. In short these two witnesses described the actual, as distinguished from the purely theoretical, results of the merger and spoke from lifelong experience in the field of banking.

The appellees likewise showed by the former president of the Ambler National Bank, Reller (Tr. 3112), and by small businessmen outside of Philadelphia, Ferraro (Tr. 3723) and Rainer (Tr. 3853), the nature of the improvement in banking service offered small businessmen after cross-county mergers with a large city bank. Those witnesses and exhibits showed that before such mergers the local banks were unable to meet local needs, that the mergers made more funds available for local loans, that service charges were a negligible factor in competition, and that the independent country banks have grown more rapidly and local competition has become more intense since the mergers than before. They also indicated the importance to small and medium size business of the greater resources of a large bank.

Appellees also showed that the proposed merger is the only feasible method of increasing adequately the lending limit and resources of the two appellees because capital-deposit ratios would impose severe penalties on stockholders if large blocks of new stock were to be sold (Tr. 3797-3801). They also showed that the proposed merger has been uniformly approved by bankers and businessmen in Philadelphia and that without it the growth of Philadelphia and its local businesses will be hampered and businessmen in the Philadelphia area will be forced to continue to seek banking accommodation in New York and elsewhere. Appellees established that unless the merger is approved the position of inferiority in which Philadelphia now finds itself will be preserved and accentuated.

DEFENDANTS' REQUESTED FINDINGS OF FACT AFFIRMED BY THE COURT.

I. The Background of This Proceeding.

(1) This action was filed on February 25, 1961 to enjoin the proposed merger of The Philadelphia National Bank and Girard Trust Corn Exchange Bank, hereinafter referred to as PNB and Girard respectively. The Complaint was filed under Section 4 of the Sherman Act (15 U.S.C. § 4) and Section 15 of the Clayton Act (15 U.S.C. § 25) for injunctive relief against alleged violations of Section 1 of the Sherman Act (15 U.S.C. § 1) and Section 7 of the Clayton Act (15 U.S.C. § 18) respectively.

(2) PNB is a national bank chartered on October 20, 1864 under an Act of Congress approved June 3, 1864. Girard is a state bank chartered on March 17, 1836 by Act number 128 of the Pennsylvania Legislature.

(3) On November 15, 1960 the Boards of Directors of PNB and Girard approved a proposed merger of the two banks, and on December 20, 1960 the two Boards approved a written Agreement of Consolidation to be effected in accordance with the provisions of the national banking statutes, 12 U.S.C. § 215.

(4) On November 15, 1960, PNB and Girard filed an Application with the Comptroller of the Currency for approval of the proposed merger under the Bank Merger Act of May 13, 1960, 12 U.S.C. § 1828(c).

(5) As required by the Bank Merger Act the Comptroller requested and received from the Federal Reserve Board, the Federal Deposit Insurance Corporation and the Attorney General advisory reports on the competitive factors involved in the proposed merger.

(6) Following receipt of these reports, the Comptroller, on February 24, 1961, approved the proposed merger after giving consideration to each of the seven factors set forth in the Bank Merger Act; he concluded with respect to competition that the merger would be beneficial to international and national competition and would not be unfavorable to local competition because an adequate number of alternative sources of banking service would remain after the merger.

(7) On May 9, 1961, the meetings of the shareholders of the respective banks were held and the Agreement of Consolidation duly approved.

(8) In the consummation of the proposed merger neither PNB nor Girard will acquire the stock or share capital of the other.

II. Nature of the Commercial Banking Business.

(9) By its nature, commercial banking is wholly different from industrial or commercial businesses.

(10) Banks are subject to extensive regulation by law and by the Federal Reserve Board, the Comptroller of the Currency, the Federal Deposit Insurance Corporation and state banking authorities.

(11) The principal purpose of the extensive government regulation of commercial banks which prohibits unrestricted competition is to protect their depositors.

(12) Governmental regulation of commercial banking has the effect of sharply limiting the scope and character of competition among commercial banks.

(13) Commercial banks are not permitted to pay interest on demand deposits. The maximum interest which

commercial banks are permitted to pay on time and savings deposits is fixed by law.

(14) Banks are restricted in the nature, amount, volume and purpose of loans they are permitted to make. All national banks and banks chartered in Pennsylvania and most other states are in general not permitted to have outstanding loans to any one customer in an amount in excess of 10% of their capital and surplus.

(15) The amount of money and credit in the banking system is directly affected by the reserve requirements, the rediscount rate and the open market practices of the Federal Reserve System.

(16) Maximum interest rates on loans are fixed by law in Pennsylvania.

(17) Minimum interest rates on loans are directly affected by the reserve requirements and open market practices of the Federal Reserve Board, by the rediscount rate fixed by the Federal Reserve Banks, and by the "prime rate" established by the nation's largest banks for their customers with the highest credit standing.

(18) Neither PNB nor Girard has, nor would the merged bank have, any influence in connection with the matters covered by Requested Findings 15 and 17 above.

(19) Entry into the banking business and the opening of branches are strictly regulated in order to protect existing banks from excessive competition, and are permitted only upon a showing that there is adequate banking business in the area to support both the existing banks and the proposed bank or branch.

(20) As a result of restrictions on entry there are thousands of communities in the United States with but one commercial bank.

Respondents' Findings.

d and FDIC may establish branches only and the three Pennsylvania counties con- Bucks, Delaware and Montgomery).

mercial banks are subject to regulation to ir investments are of high quality.

are in practice subject to strict liquidity hich affect the type of assets a bank may ertain it may make.

banking practice establishes maximum ank's total loans to its capital, its deposits

are subject to inspection and control by es who make periodic and thorough exami- ations to determine compliance with bank- and who may require that changes be made or loan-deposit ratios or liquidity position ld decline substantially from accepted

e requirements, required ratios, liquidity minimum limitations and other require- ffect of reducing banks' profit margins and bank's ability to engage in price com-

great part of a bank's earnings are derived s, without which it could not conduct its iquidity are received from the bank's cus- e withdrawn by them at any time.

competition is of the most a minor factor in g commercial banks, and in most banking eas.

(29) Interest rates on loans generally fall between the maximum fixed by law and the prime rate.

(30) Within the maximum and minimum rates fixed by law and the operation of the banking system, the interest rate which a bank charges depends primarily upon the borrower's credit standing.

(31) Commercial banks do not generally compete in the evaluation of credit standing in the making of loans; lending officers base credit evaluations on the same factors and their evaluations are generally similar.

(32) Banks do not engage in significant interest rate competition; to do so would quickly exhaust a bank's lending capacity and cause it to become over-loaned.

(33) A bank cannot raise its interest rates above the going rates without losing borrowers to other banks.

(34) Price is of minor importance in competition among commercial banks for savings accounts.

(35) Price competition for time deposits is a minor factor as between commercial banks within the same state because all commercial banks pay the maximum allowed by law.

(36) Service charges are a minor factor in competition.

(37) The principal factors in competition among commercial banks are convenience, quality of service, personal relationships, and the capacity to meet the requirements of the customer.

(38) Commercial banks do not compete in expanding credit; it is an incident of their lending function and a function of the whole banking system in conjunction with the Federal Reserve System.

(39) Safety is no longer a factor in competition between small and large banks. Deposit insurance has enabled the smallest banks to compete with the largest in this respect.

(40) Large commercial banks do not have a competitive advantage for business within the range of the resources of smaller banks. In that range, small banks are able to compete as effectively as large banks.

(41) The growth of a small bank is not adversely affected by the existence of a large competing bank; in most cases small banks grow faster than large banks, which find it difficult to maintain their positions relative to small banks.

(42) Large banks do not treat small businesses less favorably than do small banks; having greater resources, large banks are willing to take greater credit risks than small banks.

(43) The ratio of loans to assets of a bank increases with its size.

III. Commercial Banking Markets.

A. Geographic Markets.

(44) Competition in commercial banking is comprised both of the active rivalry of commercial banks and other institutions seeking to sell their services, and of the existence of alternative sources of such services for the banks' customers. Both exist in competition for commercial banking services in Philadelphia and the Delaware Valley.

(45) Commercial banks sell their services in local, regional, national and international markets. These markets overlap and are difficult to define.

(46) The customer's geographic market for banking services is determined by the location of the alternative sources from which he can obtain these services.

(47) The geographic location of the customers of PNB and Girard does not determine the geographic market in which customers of the bank may obtain banking services.

(48) The fact that PNB and Girard branches are limited to the four-county area, consisting of Philadelphia, Bucks, Montgomery and Delaware Counties, does not limit either the geographic source of their business or the location of the alternatives available to their customers.

(49) Customers are not restricted by political boundaries in the choice of banks or other financial institutions.

(50) PNB and Girard draw substantial business from customers located outside the four-county area in which they operate branches. PNB, Girard and other Philadelphia area banks derive substantial business from the entire ten-county Delaware Valley area, consisting of the above four counties and Chester County, Pennsylvania; Burlington, Camden, Gloucester and Mercer Counties, New Jersey; and New Castle County, Delaware. Much of the merging banks' business originates outside the ten-county area.

(51) The four-county area has no better claim to be the primary geographic source of defendants' business than any of several other areas or combination of areas. For instance:

(a) Defendants, combined, derive a greater amount of their commercial and industrial loans from the northeast United States outside the Third Federal Reserve District than they do from Bucks, Delaware and Montgomery Counties.

(b) Defendants grant a greater dollar amount of lines of credit to customers outside than to customers inside the four-county area.

(c) Defendants draw less business time deposits from Bucks, Delaware and Montgomery Counties than from each of the following areas: the other six counties of the ten-county Delaware Valley area outside of Philadelphia, the rest of the Third Federal Reserve District outside Delaware Valley, and the northeast United States outside the Third Federal Reserve District.

(d) PNB derives a smaller amount of all its business demand deposits from Bucks, Delaware and Montgomery Counties than it does from the northeast United States outside the Third Federal Reserve District.

(e) Defendants make to customers outside the four-county area more than 80% of their loans (in dollar amount) to domestic banks, to foreign banks, to other financial institutions, and to purchase or carry securities, and more than 60% of their miscellaneous loans.

(52) In the areas from which PNB and Girard derive their business their customers have as active alternative choices not only other commercial banks in such areas but also commercial banks located outside such areas:

(a) Large banks from large cities throughout the country solicit business in the Philadelphia area on an intensive and regular basis.

(b) The business solicited by New York and other banks include loan, deposit and corporate trust services, correspondent bank business, personal trust and other business.

(c) Banks from New York and other cities derive substantial business from Philadelphia.

(d) In such fields as the financing of mobile homes, the financing of prefabricated houses, tuition financing, and real

estate mortgages Philadelphia banks compete with banks and other institutions located in many areas outside the four counties.

(e) At least 68% in dollar volume of defendants' combined commercial and industrial loans are made to, and at least 64% in dollar volume of defendants' combined demand deposits from partnerships and corporations are received from, customers whose banking choices include commercial banks located outside the four-county area.

(53) Taking into consideration both the location of PNB's and Girard's business and the location of the alternative choices available to their customers, the market area for every service offered by PNB or Girard other than savings deposits is larger than the four-county area, varying from the ten-county Delaware Valley area up to the entire United States or the world.

(56) Plaintiff has introduced no evidence bearing on defendants' proportion of the entire banking business done within the four-county area by all banks deriving business from that area, in any category of business.

(57) Plaintiff has introduced no evidence bearing on defendants' proportion of the entire banking business done in any selected area by all banks deriving business from that area, in any category of business.

IV. Commercial Banking in the Delaware Valley.

(93) As of June 30, 1960 PNB had assets of $1,064,335,000, deposits of $924,495,000 and loans of $523,612,000. As of the same date Girard had assets of $740,920,000, deposits of $650,790,000 and loans of $399,362,000.

(94) PNB does business through 28 banking offices of which 11 are located in Philadelphia, 5 in Bucks County, 5

in Delaware County and 7 in Montgomery County. Girard does business through 39 banking offices of which 21 are located in Philadelphia, 12 in Delaware County and 6 in Montgomery County.

(95) As of December 31, 1960 there were 17 commercial banks with main offices in Philadelphia (including Brown Brothers Harriman, a private bank with offices in New York and a substantial office in Philadelphia); in addition First Camden National Bank and Trust Company, with its main office in Camden, New Jersey, has an office in Philadelphia. There are 100 additional commercial banks with main offices in the 9 counties adjacent to Philadelphia, consisting of 9 in Bucks County, 1 in Delaware County, 14 in Montgomery County, 19 in Chester County, 17 in Burlington County, New Jersey, 9 in Camden County, New Jersey, 13 in Gloucester County, New Jersey, 10 in Mercer County, New Jersey, and 8 in New Castle County, Delaware. Many of these banks operate through multiple offices; there are 284 commercial banking offices in Philadelphia, Delaware, Bucks and Montgomery Counties and more than 400 banking offices in the ten counties described above.

(96) Notwithstanding the decrease in the number of banks in the four-county area, from 1947 to 1960 the number of banking offices in that area has risen from 178 to 283.

(97) The increase in population and the expansion of industry and commerce in the Philadelphia area led to a need for larger banks; many small banks were inadequate to care for the increasing banking needs of the communities in which they were located.

(98) Small banks in the Philadelphia area have found mergers with larger banks a solution to their problems of inadequate banking services, rising costs and management succession.

(99) Merger with existing banks in the suburban and rural areas around Philadelphia was in many cases the only feasible way for larger banks to follow their customers into these areas.

(100) PNB and Girard have opened new branch offices in the four-county area to serve existing customers and to participate in the growth of new communities.

(101) Prior to 1951, PNB and Girard Trust Company were wholesale banks dealing primarily with large customers, Girard Trust Company also having a large trust business.

(102) In response to significant changes in the location of their customers, the expansion of commerce and industry in the Philadelphia area, and the increase in importance of small customers, PNB and Girard Trust Company changed their policies; since 1951 PNB has begun retail banking services and entered the personal trust and consumer credit fields, and Girard embarked on many retail banking services following the merger in 1951 of Girard Trust Company with Corn Exchange National Bank and Trust Company.

(103) Following mergers by PNB and Girard with smaller banks in the neighboring communities, the banking services available to members of those communities have increased substantially; many of these services were not previously offered by the local banks.

(104) The size of loans, secured and unsecured, which PNB and Girard officers at branch locations may make on their own authority is substantially greater than the loans previously available at the local banks; as a result borrowers are able to obtain larger loans and obtain them more quickly from Girard and PNB branches than was previously the case at the local banks.

(105) Industries located in the areas served by PNB and Girard branches, which were not having their borrowing requirements met by the local banks, are now being taken care of.

(106) More funds are available for loans through PNB and Girard branches than were previously available through local banks; in each of PNB's branch divisions the ratio of loans to deposits is substantially higher than the ratios previously maintained by the local banks with which PNB merged.

(107) The effect of bank mergers in the Philadelphia area has been substantially to increase and sharpen competition among commercial banks; competition is more intense now than when there was a much greater number of banks.

(108) There is no evidence that any prior merger in the Philadelphia area restrained trade or handicapped the growth of smaller banks.

(109) During the period 1951 to 1960, PNB and Girard experienced deposit growth of 13.9% and 14.4% respectively, compared to an average of 21.9% of all 17 banks with head offices in Philadelphia (including Brown Bros. Harriman & Co.).

(110) During the period 1951 to 1960, 12 of the other 15 banks in Philadelphia, including 3 of the 4 smallest, experienced a percentage deposit growth greater than that of either PNB or Girard; 11 of these 12 experienced growth greater than the 21.9% average of all such banks and 6 of these experienced such growth in excess of 40%.

(111) A new bank has been established in the last decade just outside Philadelphia and has experienced rapid and substantial growth.

(112) Several of the smaller Philadelphia banks have opened new branches in the center of the city in recent years; these offices have successfully competed with the center city offices of the larger banks.

(113) During the period 1951 to 1960, every one of the 9 commercial banks with main offices in Bucks County experienced percentage deposit growth greater than that of either PNB or Girard, the smallest being 30.5% and the largest being 112.5%.

(114) During the period 1951 to 1960, the only commercial bank with a main office in Delaware County experienced percentage deposit growth of 95.4%, over six times as great as that of either PNB or Girard.

(115) During the period 1951 to 1960, 13 of the 14 commercial banks in Montgomery County experienced percentage deposit growth greater than that of either PNB or Girard, the smallest of the 13 being 18.7%, four being in excess of 90% and one being 1,116%.

(116) During the period 1951 to 1960, 17 of the 19 commercial banks with main offices in Chester County experienced percentage deposit growth greater than that of either PNB or Girard, the smallest of the 17 being 16.3%, nine being in excess of 40% and the largest being 128%. The remaining two of the 17 had growth of 13.1% and 14.0% compared to the 13.9% and 14.4% of PNB and Girard respectively.

(117) During the period 1951 to 1960, all of the 17 commercial banks with main offices in Burlington County, New Jersey, experienced percentage deposit growth greater than that of either PNB or Girard, all but two being in excess of 40%, nine being in excess of 80% and the largest being 195.6%.

(118) During the period 1951 to 1960, all of the 9 commercial banks with main offices in Camden County, New Jersey, experienced percentage deposit growth greater than that of either PNB or Girard, the smallest being 49% and the largest being 162.4%.

(119) During the period 1951 to 1960, all but one of the 13 banks with main offices in Gloucester County, New Jersey, experienced percentage deposit growth greater than that of either PNB or Girard, the smallest being 18.8%, ten of them being in excess of 50% and the largest being 282.8%.

(120) During the period 1951 to 1960, all of the ten commercial banks with main offices in Mercer County, New Jersey, experienced percentage deposit growth greater than that of either PNB or Girard, eight of them being in excess of 50%, six of them being in excess of 75%, and the largest being 132.6%.

(121) During the period 1951 to 1960, all but one of the eight commercial banks with main offices in New Castle County, Delaware, experienced percentage deposit growth in excess of that of either PNB or Girard, the smallest of them being 25.2%, three being in excess of 90% and the largest being 458%.

(122) During the period 1951 to 1960, 107 of the 115 banks with main offices in the ten-county Delaware Valley area (including Brown Bros. Harriman & Co.), other than PNB and Girard, experienced percentage deposit growth greater than that of either PNB or Girard.

(123) The commercial banks in Philadelphia today are strong and vigorous competitors in offering commercial banking services to the public.

(124) The 100 commercial banks in the nine counties adjacent to Philadelphia compete in varying degrees with

PNB and Girard in offering banking services comparable to those offered by PNB and Girard within the range of the resources of such banks.

(125) PNB makes a substantial number of small loans as a matter of policy, reviews all loan applications rejected by branch officers, and has set up special programs for making loans to small businesses.

(126) During times of tight money Girard cuts back on its loans to large businesses rather than its loans to small businesses.

(127) The branch systems of PNB and Girard cover generally complementary areas; outside the center city area of Philadelphia there is scarcely any overlap between service areas of Girard and PNB branches, except in the 69th Street area where it is planned to close the PNB branch after the merger.

V. Effect of the Merger on Competition.

A. Banking Concentration.

(128) Banking concentration in a community is a product of the need for a bank large enough to meet the banking needs of commerce and industry.

(129) The amount of concentration of banking assets within a city or other geographic area is not a measure of competition within that area.

(130) A large industrial community benefits economically from the existence of competitive banks of all sizes.

(131) Of the ten largest metropolitan areas in the United States, Philadelphia, which is the fourth in size, would after the merger rank ninth on the basis of the relation of population to the largest commercial bank in each such city.

(132) If the 53 reserve and central reserve cities of the Federal Reserve System are ranked in the order of the percentage of total commercial banking assets in each city held by the largest commercial bank in that city as of June, 1956:

(a) Philadelphia would, after the proposed merger, rank 32nd with 36.16%;

(b) 26 cities exceed 40%;

(c) 14 cities exceed 50%; and

(d) 5 cities exceed 60%.

(133) If the same 53 cities are ranked in the order of the percentage of the total commercial banking assets in each city held by the five largest commercial banks in that city as of June 30, 1956:

(a) Philadelphia, after the merger, would rank 43rd with 83.82%;

(b) 36 cities exceed 90%; and

(c) 21 cities exceed 95%.

(134) There are four commercial banks in the United States, each with a lending limit greater than the aggregate of the lending limits of all the commercial banks in Philadelphia.

(135) Each of 20 commercial banks in the United States has a lending limit greater than that of any commercial bank in Philadelphia, and nine of these are in cities smaller than Philadelphia. Thirteen such banks, four of which are in cities smaller than Philadelphia, have a lending limit greater than that of the proposed merged bank.

(136) Of 224 cities with populations in 1956 over 50,000, 190 had a commercial bank with 35% or more of the total commercial banking assets in the city, and 96 had a bank with 50% or more of such assets.

(137) If 110 cities in the United States with populations of 100,000 or more are ranked in the order of the

percentage of total commercial banking assets in each city held by the largest commercial bank in that city as of June 30, 1956:

(a) Philadelphia would, after the proposed merger, rank 79th with 36.2 %;

(b) 63 cities exceed 40%;

(c) 33 cities exceed 50%; and

(d) 12 cities equal or exceed 60%.

(138) Of the 34 most populous metropolitan areas in states, like Pennsylvania, with limited area branch banking, 17 would have a greater concentration of bank deposits in their five largest banks, 20 would have a greater concentration in their three largest banks, and 16 would have a greater concentration in their largest bank, than Philadelphia County would have after the proposed merger.

(139) Every city in Pennsylvania, and in the ten-county Delaware Valley area outside Pennsylvania, with a 1960 population over 100,000, has a commercial bank with a larger percentage of the commercial banking assets in that city, than Philadelphia would have after the proposed merger. There is adequate banking competition in each such city.

(140) Between 1940 and 1960:

(a) the percentage of deposits of all commercial banks in the United States held by the 100 largest banks decreased from 56.7% to 46.2%;

(b) the percentage of such deposits held by the 10 largest banks decreased from 26.4% to 20.3%; and

(c) the percentage of such deposits held by the largest one-half of 1% of banks decreased from 52.2% to 40.9%.

(141) In the 16 states which, like Pennsylvania, have limited area branch banking:

[illegible] Findings.

[illegible] of assets of all commercial banks [illegible] largest commercial bank decreased, [illegible] in 19 states; and

[illegible] of assets of all commercial banks [illegible] the largest commercial banks decreased [illegible] in 19 states.

[illegible] metropolitan areas [illegible] County) in states with limited [illegible] percentage of assets of all commercial held by the largest bank decreased [illegible] in 26 areas.

[illegible] evidence of adverse effects on banking [illegible] a result of banking concentration [illegible]

[illegible] evidence that there has been any [illegible] or any restraint of trade [illegible] in the United States of over which the local bank has had a [illegible] the total bank assets than the [illegible] in Philadelphia.

[illegible] for the Merger.

[illegible] would have no adverse effect on [illegible].

[illegible] stability of the merged bank to compete [illegible] will not adversely affect existing [illegible] customers in Philadelphia [illegible].

[illegible] result of the merger would be loss of [illegible] to other banks in the Philadelphia [illegible].

[illegible] existing banks would be [illegible] able to share in the new banking [illegible] it would bring to Philadelphia.

(149) The merger would not lead to an increase in service charges; the merged bank would have no power to cause other Philadelphia banks to raise their charges, or to impose on such banks its own charges.

(150) The merger would have no effect on interest rates on loans; the merged bank would have no power to cause other Philadelphia banks to raise their rates, or to impose on such banks its own interest rates.

(151) The merger would have no effect on interest rates paid on savings accounts.

(152) The merger would not affect the freedom of depositors to put their deposits in the bank of their choice; the merged bank would have no power to prevent or affect such free choice, or prevent its own depositors from withdrawing their deposits at any time.

(153) The merged bank would have no power to prevent any borrower from having his banking needs met by any other Philadelphia area bank.

(154) The merged bank would have no power to affect or control the total lendable money supply in the Philadelphia area.

(155) The merger would not adversely affect the availability of credit to small and medium-sized businessmen.

(156) The merged bank would have no competitive advantage over other banks in the opening of new branches.

(157) The proposed merger would have no adverse effect on competition in the Philadelphia area at the branch level.

(158) After the merger borrowers would have available the following alternative commercial banking choices

in Delaware Valley for the size of loan indicated, without regard to the number of banks outside that area which compete for the larger customer:

Loans	Number of Commercial Banks		
	Phila. Co.	4 Counties	10 Counties
Below $10,000	17	41	116
Up to $25,000	16	39	110
Up to $50,000	14	35	90
Up to $100,000	14	27	51
Up to $250,000	13	18	25
Up to $500,000	9	10	16
Up to $1,000,000	7	7	11
Up to $2,500,000	4	4	5
Up to $5,000,000	3	3	3
Up to $7,000,000	2	2	2
Up to $8,000,000	1	1	1
Up to $15,000,000	1	1	1

(159) Three accessible commercial banks are sufficient for a prospective borrower to determine whether a loan is bankable at the going rate of interest.

(160) The geographical distribution of banking offices in the Philadelphia area is ample to provide adequate competitive banking service to prospective customers throughout the area; this would not be affected by the merger.

(161) All types of customers, including small businessmen, would have ample alternative choices for commercial banking services after the merger.

(163) The merger would have no substantial adverse effect on competition in any geographic area for

(a) demand deposits of any type, including IPC demand deposits;

(b) time deposits of any type, including time deposits of partnerships and corporations;

(c) savings accounts;

(d) commercial and industrial loans;

(e) real estate loans;

(f) instalment loans to individuals;

(g) personal trust services;
(h) single-payment loans to individuals; or
(i) any other commercial banking service.

(164) There is no reasonable probability that the proposed merger would substantially lessen competition or tend to create a monopoly in any geographic area for any of the commercial banking services listed in Request 163 above.

(165) Even if commercial banking is treated as a whole, the proposed merger would have no substantial adverse effect on competition in commercial banking in any geographic area.

(166) There is no reasonable probability that the proposed merger would substantially lessen competition or tend to create a monopoly in commercial banking in any geographic area.

(167) With respect to commercial banking and each type of commercial banking service described in Request 163 above there would remain after the merger an adequate number of alternative choices for bank customers.

(168) Competition in commercial banking in the Philadelphia area would be even more intense after the merger than at the present.

(169) Competition in the regional, national and international markets would be increased by the merger by virtue of the new bank's increased ability to compete with large banks in other cities.

(170) The proposed merger is not motivated by an intent or purpose to restrain trade or adversely affect competition in any commercial banking service in any area.

(171) The proposed merger would not substantially and unreasonably increase concentration in commercial banking in the Philadelphia area.

(172) The proposed merger would not substantially and unreasonably lessen existing or potential competition in the commerce or industry served by commercial banks in the Philadelphia area.

VI. CONVENIENCE AND NEEDS OF THE PHILADELPHIA COMMUNITY.

A. Need for the Merger.

(173) Philadelphia is the fourth largest city and metropolitan area in the United States; its port is first in the country on the basis of bulk tonnage and value of imports.

(174) Philadelphia is the center of a highly developed and diversified industrial and commercial complex known as "Delaware Valley". The community contains a substantial number of large industries whose development is as important to the community as that of smaller industries.

(175) It is desirable for a community to have a bank large enough to meet normal banking needs of its large businesses.

(176) Large companies in the Philadelphia area want to be able to do business with Philadelphia banks because of their connections with the community and it is important that they do so because of the close contacts which are required between their top officers and the bankers.

(177) Banks in Philadelphia have lagged far behind the growth of industry in the area and have not been able to meet its industry's banking needs.

(178) There is presently no Philadelphia bank large enough to serve adequately the banking needs of large industry in the Philadelphia area.

(179) The sizes of PNB and Girard have prevented them from meeting the banking needs of their customers for the following reasons:

(a) It is important for borrowers to be able to deal with a bank whose lending limit is sufficient to meet their entire borrowing needs or a substantial portion of such needs even though they may not borrow this amount at any one time.

(b) Aside from the lending limit, the size of the resources of a bank imposes a maximum limit on loans to certain customers beyond which it would be unsafe or unwise for the bank to lend.

(c) Both Girard and PNB have experienced the loss of business customers which have outgrown Philadelphia banks and have moved on to larger banks in other cities. Customers may leave a bank even though their borrowing requirements are still well below its lending limit in order to maintain a margin between their lines or loans and the lending limit of the bank.

(d) PNB and Girard are not large enough to develop the specialization which large borrowers require for their business.

(e) PNB and Girard are not large enough to develop the foreign service which customers dealing abroad require.

(180) Many industries with headquarters in or near Philadelphia go to New York and other cities for their major banking needs because no bank in Philadelphia is large enough to provide the funds and services necessary to meet their needs.

(181) The largest bank in Philadelphia ranks twentieth in the United States and is smaller than one or more banks in San Francisco, Pittsburgh, Boston, Detroit,

Cleveland and Dallas, all of which are smaller in population than Philadelphia.

(182) When the twelve largest metropolitan areas in the United States are ranked on the basis of various measures of economic activity, Philadelphia ranks fourth or fifth, whereas Philadelphia ranks ninth on the basis of the size of its leading bank.

(183) There are 17 commercial banks in New York City, each with a lending limit of $1,000,000 or more.

(184) In losing lending business to banks in other cities, Philadelphia banks likewise lose substantial deposits, personal trust business, and other business, which normally follow corporate borrowings.

(185) The merger is necessary in order to prevent any further loss of banking business by Philadelphia banks.

(186) It is impractical and uneconomic to overcome the inadequacy of the lending capacities of PNB and Girard by participating loans to other banks for the following reasons:

(a) Supporting deposits are required by banks as prerequisites for loans.

(b) To take a participation the participating bank will require a compensating deposit from either the originating bank or the customer.

(c) Large banks like PNB and Girard keep their balances with their large correspondent banks in amounts sufficient to compensate those banks only for check clearances and like routine services and not in amounts necessary to support loans.

(d) The participation of loans by small banks to their large city correspondent banks is not comparable to participations by large banks. Small banks keep substantial balances on deposit with their correspondents as reserves and as compensation for specialized services. These bal-

ances support loans participated to the large city correspondent bank.

(e) Large borrowers prefer not to deal with a number of participating banks because of the administrative burden, the added cost of maintaining deposit balances with a number of banks, and the time required in developing a new banking relationship.

(f) A large bank would run a substantial risk of losing customers and deposits if it participated loans to other large banks.

(g) The participation of a loan exceeding its lending limit by a large bank is rare.

(187) The multi-bank loans now shared by large city banks are wholly different from the type of participating loans which small banks give to or receive from large city correspondents; multi-bank loans are arranged by the borrower, which determines the identity of the participating banks and the amount to be allocated to each.

(188) The rate of increase of deposits of PNB and Girard combined from 1949 to 1959 was 12.31% compared to 54.62% for all banks in the United States.

(189) Merger is the only feasible way in which PNB and Girard can become large enough to meet the banking needs of the community; an adequate increase in size by the sale of stock is not feasible because of the cost and because of the dilution of the earnings available for existing shareholders, and an increase in size by the accumulation of retained earnings would take many years.

B. Benefits to the Community from the Merger.

(190) The increased total resources of the merged bank would enable it to create special departments for types of loans and industry groups, increase its services

to correspondent banks, establish departments to develop new services and develop the use of electronic equipment.

(191) The increased total resources of the merged bank would enable it to develop more fully its foreign services through increased investment in PNB's international investment corporation, the formation of an international banking corporation, the use of full-time representatives abroad and the possible opening of foreign branches.

(192) The increased total resources of the merged bank would enable it to improve and expand existing services and make them available to many more customers.

(193) The increased total resources of the merged bank and its $15,000,000 lending limit would enable it to make larger loans to more large corporations.

(194) The increased total resources of the merged bank would enable it to compete more vigorously and effectively with banks in New York and other cities.

(195) The new and improved services the merged bank would be able to develop and offer to large businesses would enable it to attract the substantial deposits which are maintained by customers in return for such services.

(196) The merged bank would attract additional deposits from large customers as compensating balances for loans; many such deposits remain on deposit with the lending bank after the loans are paid off.

(197) Large customers as a group maintain average deposits in amounts substantially greater than their average loans.

(198) The increased size of the merged bank would give it increased prestige which would assist in attracting banking business from outside the Philadelphia area in the national and international fields of competition.

(199) The merged bank would have additional funds available for lending to local borrowers by reason of its increased ability to prevent loss of deposits to other larger banks and to attract business in the national and international fields.

(200) The merged bank would be able to serve more adequately the banking needs of large industries in the community.

(201) The increased resources of the merged bank would enable it to make greater risk loans and thereby give greater assistance to new or growing companies.

(202) The merged bank would be better able to assist smaller Philadelphia banks in making loans which exceed the smaller bank's lending capacity.

(203) The merged bank would obtain a greater share of the future banking business of large customers than both together now receive; such business will otherwise go to large banks in other cities.

(204) The attraction of such new business by the merged bank would bring with it other banking business in which other Philadelphia banks would share.

(205) The existence of the merged bank would assist in attracting new business to locate in the Philadelphia area.

(206) The merger would have a beneficial effect on commerce and industry in the Philadelphia area.

(207) The improved foreign services of the merged bank would be an important factor in the development of the port of Philadelphia.

PLAINTIFF'S REQUESTED FINDINGS OF FACT AFFIRMED BY THE COURT.

I. JURISDICTION.

(1) This is an action by the United States under Section 4 of the Sherman Act and Section 15 of the Clayton Act.

(2) Defendant Philadelphia National Bank (PNB) is a banking association organized under the laws of the United States with its principal place of business at Philadelphia, Pennsylvania.

(3) Defendant Girard Trust Corn Exchange Bank (Girard) is a banking association organized under the laws of the State of Pennsylvania with its principal place of business at Philadelphia, Pennsylvania.

(4) Both defendants are engaged in interstate commerce.

(5) PNB is engaged in interstate commerce. It receives substantial amounts of deposits from sources in foreign countries and in states other than Pennsylvania, and makes substantial amounts of loans to borrowers in such other states and in foreign countries and conducts other banking business with customers in other states. In effecting these transactions it utilizes the United States mails, telephone and telegraph.

(6) Girard is engaged in interstate commerce. It receives substantial amounts of deposits from sources in foreign countries and in states other than Pennsylvania, and makes substantial amounts of loans to borrowers in such other states and in foreign countries and conducts other banking business with customers in other states. In effecting these transactions it utilizes the United States mails, telephone and telegraph.

II. DEFENDANTS.

A. Philadelphia National Bank.

(7) The Philadelphia National Bank was chartered on October 20, 1864 under an act of Congress of June 3, 1864. It merged in 1926 with Girard National Bank. At that time these banks were the first and fourth largest banks, respectively, in Philadelphia. In 1928 it merged with Franklin Fourth Street National Bank. It remained as a wholesale bank until 1951 when a decision was made to enter the retail banking and trust fields. Since 1951 PNB has acquired nine banks. In so doing it has acquired $42,078,000 in loans, $172,968,000 in deposits, and 18 offices.

(8) As of March 10, 1961, PNB conducted a general commercial banking business through 27 offices, 10 of which were located in Philadelphia, five in Delaware County, five in Bucks County, and seven in Montgomery County. During the trial PNB opened another office in Philadelphia.

(11) The financial history of PNB is excellent; the bank's capital position is adequate; the future earnings prospects of the bank are good, and the bank's general management is good.

B. Girard Trust Corn Exchange Bank.

(12) Girard Trust Corn Exchange Bank began business in 1835. Girard was primarily engaged in the trust business and accompanying banking services until 1940 when efforts were begun to develop commercial business and consumer credit loans. Until 1950 Girard had only one office. By the end of 1950 its deposits totaled $216,000,000, its capital funds were $19,000,000 and its personal trust assets had an estimated market value of one billion dollars. In the past ten years Girard has engaged in six mergers, by which it acquired $142,318,000 in loans, $412,784,000 in deposits, and 32 offices.

(13) Defendant Girard conducts a general commercial banking business through 38 offices of which twenty are located in Philadelphia, twelve in Delaware County, and six in Montgomery County.

(15) Girard has able and sound management, and its financial condition is strong.

(16) In the period December 31, 1951 to December 31, 1960, the deposits of PNB increased by 29 per cent and the deposits of Girard increased by 38 per cent. This percentage increase for Girard is in addition to the increase attributable to the merger of The Girard Trust Company and the Corn Exchange National Bank, which had been completed in June, 1951.

III. The Proposed Merger.

(18) Merger of PNB and Girard was first discussed in the spring of 1956 but these discussion were discontinued in the summer because a fair basis of exchange of shares could not be determined, and also to allow both banks to work out operating problems resulting from prior mergers.

(20) Merger discussions between PNB and Girard were resumed in April 1960 by Geoffrey Smith, chairman of the board of Girard, and Frederick A. Potts, president of PNB.

(21) By November 1, 1960, representatives of the two banks had agreed on the basis for an exchange of shares.

(22) The proposal that the defendant banks merge was presented to the boards of directors of the respective banks on November 15, 1960, and was approved. On the same day the application was filed with the Comptroller of the Currency in Washington, D.C.

(23) On December 20, 1960, the boards of directors of the defendant banks approved a form of agreement of merger, and on the same date the agreement of merger was duly executed by the appropriate officers of the defendants.

(26) Pursuant to the provisions of Section 18(c) of the Federal Deposit Insurance Act, as amended (12 U.S.C. 1828(c)), the Comptroller of the Currency requested and received reports concerning the competitive factors involved in the proposed merger from the Board of Governors of the Federal Reserve System, the Attorney General, and the Federal Deposit Insurance Corporation.

(27) The Comptroller of the Currency approved the proposed merger on February 24, 1961.

(28) The complaint in this action was filed on February 25, 1961.

IV. TRADE AND COMMERCE.

A. Commercial Banking as an Institution.

(32) Commercial banks are the only financial institutions in the United States authorized to receive demand deposits.

(35) One of the factors inducing customers of commercial banks to finance their purchases of consumer items through their bank is the fact that the commercial bank also performs other financial services for the customers.

(37) No other financial institution can provide all the services, including demand deposit and commercial loan services, provided by commercial banks.

(39) The Federal Reserve System controls the volume of credit in the country by establishing the percentage of their deposits which member banks must maintain as reserves, by raising or lowering the discount rate at which

[illegible]: Findings.

[illegible] the Federal Reserve, and by [illegible] Government securities in

[illegible] which are members of the [illegible] must maintain on de- [illegible] Bank, or in currency in [illegible] of this per cent of their demand [illegible] reserve cities or reserve cities [illegible] and if they are so-called country

[illegible] most of the commercial banks [illegible] than 50 per cent of commercial [illegible] and therefore regulated in part [illegible] Insurance Corporation. Virtually

all Philadelphia banks including PNB and Girard are insured by the FDIC.

(47) National banks and state banks do a comparable general commercial business.

B. Unique Features of Commercial Banks.

1. Demand Deposits.

(49) Commercial banks are the only financial institutions in the United States authorized to receive demand deposits.

a. Short terms of loans.

(54) The heavy concentration in demand deposits on the part of commercial banks tends to restrict their lending to shorter term loans since they must be prepared to meet possible heavy demand from depositors to withdraw these deposits.

(55) The necessity for a commercial bank to maintain liquidity tends to channel its lending activities in the field of short-term financing, especially commercial loans.

(56) Commercial banks do not care to make long-term real estate type loans.

b. Role in transfer of funds.

(57) Only commercial banks provide checking account services.

(58) Most payments at the present time are made by the transfer of commercial bank demand deposits from one customer to another by the use of checks. This function of commercial banks cannot be performed by any other institution.

c. Commercial banks hold primarily demand deposits.

(59) The central element in the success of a commercial bank is its ability to attract and retain as much deposits as possible.

(60) Deposit liabilities are the predominant liabilities of Girard and PNB as they are for the commercial banking system in general.

(61) For the commercial banking system as a whole, two-thirds of total deposits are demand deposits and one-third are time deposits. PNB and Girard's ratios of demand deposits to total deposits is somewhat higher than two-thirds.

(62) In June of 1960, the average total of time and savings deposits of PNB and Girard was $253,900,000, and demand deposits of the two banks for the same period were $1,300,000,000. Thus, more than 83% of the combined banks deposits were in the form of demand deposits.

2. Commercial and Industrial Loans.

(63) For commercial banks the area of commercial and industrial loans is the most important type of loan.

(64) Customarily commercial banks do not lend more than 60 percent of their deposits.

(65) Commercial banks in the United States concentrate an average of roughly 40% of their loans in the field of commercial and industrial loans. PNB and Girard specialize in commercial loans to an even greater extent than the average bank.

(66) PNB, as of June 30, 1960, had approximately 57% in dollar amount of its loans in the commercial and industrial category. Girard, as of June 30, 1960, had approximately 49% in dollar amount of its loans in the commercial and industrial category.

(67) Commercial banks make short-term loans to businesses and individuals for operating expenses, inventories, and similar purposes.

(68) Commercial banks specialize in making commercial loans to business.

(70) Commercial banks generally seek to have their borrowers maintain 20% of their borrowings on deposit in the lending institution as a so-called compensating balance.

(72) Unsecured, short-term commercial loans are readily available to Philadelphia businessmen only from commercial banks.

Reliance of small and medium size borrowers on commercial bank loans.

(73) For commercial loans of $50,000 and under there is very little competition other than commercial banks. For certain of these loans which might conceivably be secured by accounts receivable, sales finance companies or factors may provide some competition.

(74) Customers of commercial banks cannot normally obtain loans from banks which do not have knowledge of the customers' credit standing.

(76) The vast number of commercial loans made in the United States are made to smaller sized business. Thus, in 1955, member banks of the Federal Reserve System made 503,000 commercial loans to businesses of under $50,000 assets; 415,000 such loans to businesses between $50,000 and $250,000; 126,000 such loans to businesses between $250,000 and $1,000,000; 38,000 such loans to businesses between $1 million and $5 million; 11,000 loans to businesses of from $5 to $25 million; 4,000 loans to businesses between $25 and $100 million, and 6,000 commercial loans to businesses of over $100 million in assets. Substantially the same pattern appears in the 1957 survey.

(77) Generally, a small business is one with assets of less than $250,000 and fewer than 500 employees. How-

ever, these general guidelines may vary according to the nature of the business being considered. The definitions contained in the rules and regulations of the Small Business Administration are a reliable guide to the "small business" in various industries.

(78) Small and medium size business is more dependent on commercial banks for the funds it needs than any other segment of borrowers.

(79) The Philadelphia area business firm population is primarily one of small enterprises. Thus, the area has 35,000 retailing establishments with 159,000 employees and 6,100 industrial establishments with employees numbering 477,000. There are also 5,900 wholesaling establishments with 73,000 employees.

(80) Small and intermediate sized business has very little opportunity to obtain external funds from institutional investors such as insurance companies, pension funds, and other financial intermediaries, nor does it have any better opportunity to derive short-term working capital from savings and loan associations, mutual savings banks and similar savings institutions. The commercial bank is the primary, and in practice the only regular, source for the recurring short and intermediate-term financing needs of small and intermediate-sized business.

3. Other Functions Performed by Commercial Banks Which Cannot be Performed as Well, if at All, by Other Financial Institutions.

(81) Commercial banks provide a wide variety of trust services. Personal trust services include acting as investment manager and advisor, as trustee for employee benefit trusts, as executor, administrator, custodian, and in other capacities. Corporate trust services include acting as registrar or transfer agent, bond and coupon paying agent, and others.

(82) Some banks offer their corporate depositor customers an account reconciliation service, which includes making out checks for the depositor customer, sending out the checks, making up a statement for the depositor customer, and sending out the statements.

(84) Commercial banks are the channel through which most of the currency in circulation finds its way into the economy.

(85) Other services provided by commercial banks to corporate customers include money wire transfer, check collection, credit information, and payroll accounts.

4. Participations.

(88) Commercial banks frequently invite other banks to participate in loans which do not exceed their own lending limit if they are short of loanable funds or if they do not care to assume the entire risk of the requested loan.

(89) In a number of cases PNB has participated with other banks under a written agreement making loans which in total exceed PNB's lending limit or even the lending limit of any bank as well as loans which are well within PNB's limit. The interest rates on these loans vary.

(90) In a number of cases Girard has participated with other banks under a written agreement between the borrower and the banks for a loan in excess of Girard's lending limit or even the lending limit of any bank as well as loans well within Girard's limit. The interest rates on these loans vary.

Combined	1,060.6	68.2	493.9	31.8

VI. COMPETITION WHICH WOULD BE ELIMINATED BY THE MERGER.

A. General.

(286) At present there is substantial direct competition between the head offices of PNB and Girard and this competition will be eliminated if the merger is approved.

(287) Girard is an active and alert competitor of PNB throughout the area in which PNB has banking offices.

(288) Competition between commercial banks in Philadelphia is "fierce" at the present time and will, if the proposed merger is consummated, be "even more vicious."

(289) PNB competes in a variety of ways and on a regular basis to take customers away from Girard, as well as all the other banks in the Philadelphia area, utilizing calls and entertainment, the selling of new services and the bank's stature or lending limit, and every other competitive advantage available; and as PNB increases its services, it increases its ability to attract these customers and its officers expect to obtain more of these customers as a result.

(290) At the time of application to merge, November 15, 1960, PNB and Girard had the following mutual or common account customers who had deposit balances of $10,000 or more with the two banks or loan accounts of $50,000 or more with the two banks.

Type of account	Number of mutual accounts	Balance	
Checking accounts	392	PNB	$163,820,700
		Girard	$101,782,700
Time accounts	8	PNB	$1,149,400
		Girard	$3,094,000
Savings accounts	36	PNB	$736,400
		Girard	$589,500
Loans	67	PNB	$48,949,000
		Girard	$43,599,000

(292) PNB is an active competitor of Girard in the banking services which both banks render.

B. Branches.

(293) The Philadelphia banks compete to acquire banks in the three contiguous counties. The Philadelphia banks compete to acquire desirable branch sites.

(294) In order to maintain its competitive position Girard believes it must keep a strategic branch system.

(295) An important factor to PNB in viewing its relative position in the 69th Street area was the merger of Upper Darby National Bank into Girard. PNB stated:

> This merger will undoubtedly reduce our competitive ability in the area in that it will add a second bank in the area capable of offering its depositors the convenience of both downtown offices and local offices.

(296) At the time PNB decided to locate a branch at 69th Street a particularly important factor in its decision was the need to have a convenient location to protect and retain existing business.

(297) The 69th Street branch of PNB is located next door to a branch of Girard, another Girard branch is 2.9

miles away, and a third Girard branch is 3.8 miles away. The present PNB office at this address will be closed if this merger is approved.

(299) One of the reasons PNB established the Roosevelt Boulevard office was to serve more efficiently and conveniently the customers it had in the area.

(300) Three branches of Girard are within three miles of the Roosevelt Boulevard office of PNB, at distances of 1.6, 2.1, and 2.9 miles respectively.

(301) PNB's nearest branches to the Roosevelt Boulevard office are 5.5 miles and 4.5 miles away.

(302) In addition to the Girard, which eventually did acquire the Ambler National Bank, the Broad Street Trust Co. and PNB also wanted to acquire the Ambler Bank, and representatives of those banks discussed acquiring the bank with directors of the Ambler National Bank.

(303) The Suburban Station office of Girard is just one mile from PNB office at 3131 Market Street.

(304) The Girard has an office 1.25 miles from the Front Street Office of PNB.

(305) The Erie and Castor Avenue Office of PNB is just one mile from the nearest branch of Girard.

(306) The Front and Allegheny Office of PNB is only .875 of a mile from the Germantown and Lehigh Office of Girard.

(307) The Ardmore Office of PNB is proximate to several offices of Girard and some customers of the Girard reside in the area of the Ardmore office.

(308) Competition between the branches of the PNB and Girard is substantial, as shown by the following:

CITY OFFICES WITHIN 1 MILE OF EACH OTHER

[1] Includes office at 4700 Frankford Avenue.

(309) There is a substantial amount of competition between most of the offices of PNB within Philadelphia and one or more of the offices of Girard.

(310) All eleven of the offices of Girard in the City of Philadelphia as shown on Exhibit D-12 are in competition with one or more offices of PNB.

(311) All of the branches of PNB and Girard located in Delaware County are at least potential competitors of a branch of the other bank.

(312) In Montgomery County, the branch of PNB at St. James Place, Ardmore, is in actual direct competition with the Wynnewood branch of Girard. All other branches of the two defendants in this county are at least potential competitors of a branch of the other bank.

(313) Commercial customers with accounts in the following offices of PNB as of November 22, 1960, also had accounts with Girard:

Office of Philadelphia National	*Number of accounts*
Bucks County	6
Chester-Cambridge	5
Montgomery Office	6
Penn Center Office	1
Ardmore Office	1
Gimbels Office	1
Lansdale Office	4
Conshohocken Office	7
Northeast	22
Hatboro Office	3
Total	56

(314) The branches of PNB are in substantial direct competition with the branches of Girard in the area of business loans of $50,000 and over.

(315) In the opinion of the vice president of the consumer credit department of Girard, branches of the Girard which are five miles from a branch of PNB compete with that branch for the making of personal loans.

C. Loans.

1. General.

(316) PNB competes with Girard for commercial and industrial loans, in single payment loans to individuals, in loans on residential property, in loans on business properties, in loans on securities, in installment loans on automobiles, in installment loans on consumer goods, and in a miscellaneous variety of other loans.

(317) The average rate charged for loans in the foreign department of PNB on November 15, 1960, was 4.849 per cent, and for Girard the average rate was 5.28 per cent. In the area of commercial loans, PNB's average rate was 5.45 per cent and Girard's average rates were 5.18 per cent on collateral loans and 5.26 per cent on other commercial loans. The average rate on loans in PNB's time credit department was 9.95 per cent and the average rate in Girard's consumer credit department was 9.06 per cent. All of the above rates are simple interest rates.

2. Commercial and Industrial Loans.

(318) Of the total commercial and industrial loans of PNB in the four-county area on October 5, 1955, 78.97 per cent were for $50,000 or less. Of the total commercial and industrial loans of Girard in the four-county area on October 5, 1955, 64.27 per cent were for $50,000 or less.

(320) The merger of PNB and Girard would completely eliminate all competition between them in commercial and industrial loans.

3. Loans to Individuals, Installment and Single Payment.

(321) Girard and other Philadelphia banks are competitors of PNB in the consumer credit field.

(322) In 1960 PNB had 17 per cent of its total loaned funds committed to loans to individuals for household, family, and other personal expenditures and Girard had 31 per cent of its total loaned funds committed to that category.

(323) PNB and Girard make personal loans; PNB competes with Girard for personal loan business. PNB and Girard are competitors for the consumer credit business.

(324) Both PNB and Girard offer an executive loan service, which is a form of personal loan service; PNB competes with Girard in offering such service.

(325) PNB will cut its interest rate to meet competition in some cases.

(327) Generally the interest rates charged by Girard on equipment loans are higher than those charged by PNB. Officers of the defendants have expressed uncertainty as to which of the two rates should be followed if this merger is approved. In this connection they pointed out to superiors that if the lower of the two rates are to be followed

the resulting bank's income will suffer, both on equipment loans and in other categories where rates vary.

(328) The recommendation of the equipment loans task force committee composed of officers of both defendants was that Girard's higher consumer credit interest rates be utilized by the resulting bank rather than the simple interest basis on which PNB makes equipment loans. The committee believed that competition would be such that the merged bank could obtain the higher rate.

(332) The merger of PNB and Girard would completely eliminate all competition between them in loans to individuals, both installment and single payment.

4. Real Estate Loans.

(336) The merger of PNB and Girard would completely eliminate competition between them in real estate loans.

D. Trusts.

(337) PNB competes with Girard for trust business.

(338) Since PNB entered the trust business in 1951, when it acquired the Ninth Bank and Trust Company and that bank's $17-million in trust assets, PNB's trust assets have grown to approximately $400 million. Girard administers approximately $2.5-billion of trust assets.

(339) PNB is a potential competitor of Girard in those trust services which it does not now provide.

(340) Both PNB and Girard offer common trust fund plans, a very popular form of investment for smaller trust assets. PNB competes with Girard for this type of business.

(341) Both PNB and Girard offer estate planning services to individuals. PNB competes with Girard for such business.

(342) PNB as of November 15, 1960, had 2,570 personal trust accounts and Girard had 7,755 such accounts for a total of 10,325. In dollar volume, the assets under these trusts amounted to $361,300,000 for PNB and $2,248,206,000 for Girard, or a total in excess of $2,600,000,000.

(343) Both PNB and Girard act as trustees in administering pension and profit-sharing funds for corporations. PNB competes with Girard for this business.

(344) PNB as of November 15, 1960, had 58 trustee and fiscal agency corporate trust accounts and Girard had 141 such accounts. The number of bond and coupon paying agencies were 65 and 158 for the respective banks, stock transfer agencies were 26 and 57 respectively, and PNB had 18 registrar accounts compared with 52 for Girard.

(345) Both PNB and Girard offer investment advisory services to individuals and corporations. PNB and Girard compete for such business.

(347) The merger of PNB and Girard would completely eliminate competition between them for trust business.

E. Deposits.

1. Time Deposits.

(348) PNB competes with Girard for time deposits of individuals, partnerships, and corporations, for time deposits of state and political subdivisions, and for time deposits of banks.

(349) On February 1, 1961, officers of the defendants compared seven existing practices of Girard with the practices of PNB in paying interest and assessing charges on savings accounts. In every instance the practice followed by Girard was more favorable to the bank than the practice of PNB. In every instance it was recommended

that the Girard practice or one even more lucrative for the resulting bank be adopted. It was estimated that these practices had resulted in a saving of $138,000 in the interest Girard paid its savings depositors in 1960.

(351) The merger of PNB and Girard would completely eliminate competition between them for time deposits.

(353) The merger of PNB and Girard would completely eliminate competition between them for time and savings deposits.

2. Demand Deposits.

(355) PNB and Girard offer all kinds of checking accounts, including regular checking and special checking accounts. PNB competes with Girard in offering such checking account services.

(356) On November 15, 1960, there were 392 checking accounts in which a depositor maintained a balance of at least $10,000 in either PNB or Girard and also carried a balance in the other; these mutual accounts totaled over $265 million, of which PNB held over $163 million, and Girard over $101 million.

(358) The merger of PNB and Girard would completely eliminate competition between them for demand deposits.

(360) The merger of PNB and Girard would completely eliminate competition between them for IPC demand deposits.

F. Other Areas of Competition.

(363) PNB competes with Girard for the business of correspondent banks.

(364) Both PNB and Girard offer their correspondent banks various services, including investment advice, clearance of checks, proof transactions, and collection of items.

(365) PNB competes with Girard in offering foreign department services to customers.

(366) PNB operates the largest foreign department of all banks in Philadelphia.

(367) Girard operates the second largest foreign department in Philadelphia.

(368) PNB competes with Girard in offering lock box services to corporate customers.

(369) Both PNB and Girard offer special tuition financing plans to individuals. PNB competes with Girard in offering such service.

(370) PNB provides a bank credit card service, and Girard provides a ready credit service, which are similar services and competitive.

(371) Both PNB and Girard offer account reconciliation services and compete with each other in offering such services.

(372) Both PNB and Girard compete actively in offering many services to customers in the four-county area and elsewhere.

(373) The merger of PNB and Girard would completely eliminate competition between them in the many services which they both offer.

VII. Increase in Concentration as a Result of the Merger.

A. Increase in Banking Concentration Generally.

(374) As of December 31, 1960: (1) the largest 100 banks in the United States representing 0.74% of all com-

mercial banks held $105,837,000,000 of deposits representing 46.2% of the deposits of all commercial banks in the United States, (2) the largest 10 banks representing 0.074% of all commercial banks held $46,436,000,000 of deposits representing 20.3% of the deposits of all commercial banks in the United States, (3) the largest commercial bank in the United States representing 0.0074% of all commercial banks in the United States held $10,285,000,000 of deposits representing 4.5% of the deposits of all commercial banks.

(375) As of June 30, 1956 in 124 cities with population between 50,000 and 100,000 there were 113 in which the largest bank had 35% or more and 66 in which the largest bank had 50% or more, of the banking resources in the city.

(376) As of June 30, 1956 in 38 cities with population between 100,000 and 150,000 there were 33 in which the largest bank had 35% or more, and 15 in which the largest bank had 50% or more, of the banking resources in the city.

(377) As of June 30, 1956 in 13 cities with population between 150,000 and 200,000 there were 11 in which the largest bank had 35% or more, and 3 in which the largest bank had 50% or more, of the banking resources in the city.

(378) As of June 30, 1956 in 9 cities with population between 200,000 and 250,000 there were 7 in which the largest bank had 35% or more, and 4 in which the largest bank had 50% or more of the banking resources in the city.

(379) As of June 30, 1956 in 6 cities with population between 250,000 and 300,000 there were 4 in which the largest bank had 35% or more of the banking resources in the city.

(380) As of June 30, 1956 in 5 cities with population between 300,000 and 350,000 there were 5 in which the largest bank had 35% or more, and 3 in which the largest bank had 50% or more, of the banking resources in the city.

(381) As of June 30, 1956 in 4 cities with population between 350,000 and 400,000 there were 3 in which the largest bank had 35% or more, and 1 in which the largest bank had 50% or more, of the banking resources in the city.

(382) As of June 30, 1956 in 7 cities with population between 400,000 and 500,000 there were 4 in which the largest bank had 35% or more of the banking resources in the city.

(383) As of June 30, 1956 in 18 cities with population of 500,000 and over there were 10 in which the largest bank had 35% or more, and 4 in which the largest bank had 50% or more, of the banking resources in the city.

(384) As of June 30, 1956 of 224 cities with population of over 50,000 there were 190 in which the largest bank had 35% or more, and 96 in which the largest bank had 50% or more, of the banking resources in the city.

(387) There were 69 commercial banks in Bucks, Montgomery and Delaware Counties in 1947; in 1956 there were only 39 such banks.

(388) The percentage of total bank assets controlled by the four largest banks in the four-county area was 49 per cent in 1947 and 64½ per cent in 1956.

(389) Of the 31 banks eliminated through acquisitions in Bucks, Montgomery and Delaware Counties from 1947 to 1956, 14 were acquired by other banks within their own counties and 17 were acquired by Philadelphia banks across county lines.

(392) In a number of mergers of four-county area banks with Philadelphia banks the terms offered by the latter were so attractive that stockholders of the local institution concluded their investment would be more profitable if they became part of the Philadelphia bank offering to merge than if they continued in their own locality as an independent bank.

(393) A Philadelphia bank which succeeds in locating a branch near a business firm located in a suburban area which also relies on downtown Philadelphia banks is in a better position to compete for the loan and other banking business of such a firm than is a Philadelphia bank which does not have such a branch or a much smaller local bank.

(394) At the present time, in terms of total assets, the largest bank in Philadelphia is The First Pennsylvania Banking & Trust Company, the second largest is PNB, and the third largest is Girard.

C. Prior Mergers by Defendants and Competition Eliminated by Such Mergers.

(432) A substantial part of the present size of both PNB and Girard has been achieved as the result of mergers and consolidations in the last ten years.

For PNB in the period December 31, 1949, to December 31, 1959, acquisitions and consolidations of other banks accounted for 63 per cent of total deposit growth, 12 per cent of total loan growth, and 59 per cent of total asset growth.

For Girard in the same period, acquisitions and consolidations accounted for 91 per cent of total deposit growth, 37 per cent of total loan growth, and 85 per cent of total asset growth.

(433) The largest share of the growth of PNB and Girard between Dec. 31, 1949, and Dec. 31, 1959, has been

by acquisition of other banks. The extent of this growth as a percentage of deposits, loans, assets and capital accounts on Dec. 31, 1949, is as follows:

	Deposits	Loans	Assets	Capital accounts
PNB	*Percent*	*Percent*	*Percent*	*Percent*
Growth by acquisition	26	28	26	26
Other growth	15	204	18	24
Total growth	41	232	43	50
GIRARD				
Growth by acquisition	186	170	185	163
Other growth	19	289	33	100
Growth by sale of stock				25
Total growth	205	459	218	288

PNB ACQUISITIONS.

(434) PNB launched its merger program in 1950 because of management's belief that if PNB was to maintain its position, the quality of its services, and its reputation, it could no longer confine itself solely to the wholesale banking business.

(435) The Philadelphia National Bank acquired the Ninth Bank & Trust Company on September 21, 1951.

At the time of its acquisition by PNB, the Ninth Bank & Trust Company competed with PNB in making certain loans to larger corporations in the northeast section of the city of Philadelphia.

Prior to the acquisition of the Ninth Bank & Trust Company in 1951, PNB was not in the so-called retail bank business; PNB was a wholesale bank and at the end of 1950, of its 11,000 to 12,000 accounts, 1,000 accounts were represented by correspondent banks and foreign accounts.

The acquisition in 1951 by PNB of the Ninth Bank & Trust Company marked the entry of PNB into the personal trust business.

At the time of this acquisition, both PNB and the Ninth Bank & Trust Company were engaged in the commercial and industrial loan business and competed with each other with respect to certain industrial corporations and large individual depositors.

(436) The PNB acquired the First National Bank of Conshohocken on September 25, 1953.

The move across county lines by PNB in acquiring the First National Bank of Conshohocken was opposed by various banks in Montgomery and Bucks Counties.

At the time of this acquisition, PNB and the First National Bank of Conshohocken were in direct competition for large corporate and borrowing accounts in Conshohocken.

The larger industrial corporations in Conshohocken maintained accounts in PNB's central city office, 15 or 16 miles distant.

(437) Aggressive expansion programs, including the acquisition of other banks, by the Pennsylvania Company for Banking & Trusts (now the First Pennsylvania Banking & Trust Co.) and the Girard had, by 1953, put these banks in a position to "breathe down the neck" of PNB, thus threatening its claim to being the largest bank in Philadelphia.

(438) PNB used the aggressive expansion programs of its nearest rivals, the Pennsylvania Company for Banking & Trusts (now the First Pennsylvania Banking & Trust Co.) and Girard, to justify in part its acquisition in 1953 of the National Bank of Conshohocken when discussing this acquisition with an official representative of the Comptroller of the Currency.

(439) PNB acquired the Chester-Cambridge Bank & Trust Company on February 20, 1954.

(440) PNB acquired the First National Bank of Lansdale on February 20, 1954.

At the time of this acquisition, both PNB and the First National Bank of Lansdale competed for the larger corporate accounts in the Lansdale area.

(441) PNB acquired the Montgomery National Bank of Norristown on February 20, 1954.

At the time of this acquisition, both PNB and the Montgomery National Bank of Norristown competed for the commercial and industrial loan business of the larger corporate concerns in the Norristown area.

(442) PNB acquired The Hatboro National Bank on December 9, 1955.

At the time of this acquisition PNB and The Hatboro National Bank competed for commercial and industrial loan business from corporations in the Hatboro area.

(443) PNB acquired The Citizens National Bank of Pottstown on December 9, 1955.

At the time of this acquisition PNB and The Citizens National Bank of Pottstown competed in the commercial and industrial loan area.

(444) PNB acquired The Delaware Valley Bank & Trust Company on November 9, 1956.

At the time of this acquisition, PNB and The Delaware Valley Bank & Trust Company competed in offering comercial and industrial loans.

(445) PNB acquired The Gimbel Brothers Bank & Trust Company on July 11, 1958.

At the time of this acquisition, PNB and The Gimbel Brothers Bank & Trust Company competed for savings and personal checking accounts.

(446) The nine acquisitions made by PNB since 1951 added the following offices, loans, and deposits:

Date	Bank	Number of offices	Loans (add 000)	Deposits (add 000)
9-21-51	9th Bank & Trust	5	$6,677	$50,739
9-25-53	1st Natl. Bank of Conshohocken	1	3,409	14,890
2-20-54	Chester-Cambridge Bank & Trust	2	6,647	26,978
2-20-54	1st Natl. Bank of Lansdale	1	5,627	14,472
2-20-54	Montgomery Natl. Bank of Norristown	1	1,788	10,401
12- 9-55	Hatboro Natl. Bank	1	2,795	9,118
12- 9-55	Citizens Natl. Bank & Trust of Pottstown	1	3,633	8,478
11- 9-56	Delaware Valley Bank & Trust	5	11,502	26,124
7-11-58	Gimbel Bros. Bank & Trust	1	.0	11,768

GIRARD ACQUISITIONS.

(447) By 1950 Girard decided that a program of bringing a more complete line of services to bank customers in areas not conveniently located near its main office by establishing new branch offices would be too costly and could not be completed in time to achieve the progress in the banking business which Girard desired.

(448) In 1950 Girard decided that it could rapidly and economically enlarge the retail bank services offered by it and increase the number of offices providing its services by merging with the Corn Exchange National Bank and Trust Company.

(449) By 1950 the Corn Exchange National Bank and Trust Company had established 12 offices in Philadelphia and had developed retail bank services such as consumer credit and special checking accounts.

(450) After the Girard Trust Corn Exchange merger was completed in 1951 that bank surveyed the Philadelphia area with a view to establishing offices in sections of the city in which it was not then represented. In furtherance of this purpose Girard merged with the National Bank of Germantown in the Germantown and Chestnut Hill areas in 1953 and with the North Philadelphia Trust

at Broad Street and Erie Avenue in 1954. When
)th of these banks had only one office.

Girard paid premiums for the offices it acquired
outside of Philadelphia County.

In order to retain some of its old customers
act the banking business of others who were
the Montgomery County area, contiguous to
Girard acquired in 1957 the National Bank
and the Ambler National Bank, both of which
g three offices in Montgomery County.

A few months prior to the time the respective
directors of the Ambler National Bank and
roved the merger of the two banks, and while
nks were still competitors to some extent, repre-
of the two banks discussed the advisability of
r National Bank proceeding to open a new
ce in a new industrial center; the purpose of this
was to determine whether this step would make
r National Bank attractive at a future time as
be acquired by a large Philadelphia bank. The
tional Bank subsequently did establish the pro-
nch, shortly before its merger with Girard.

One of the reasons Girard acquired the Ambler
ank was the fact that Fort Washington Indus-
was being established at the time and a newly
ch of Ambler National in this park presented
participate in the growth of business and
n the area.

er made to the Ambler National Bank by the
955 called for a premium amounting to 89%
urrent net worth and 100% over market value
bler National Bank.

55 Girard offered to pay the Ambler National
kholders a premium of $501,836, or 89% of the

real net worth of the Ambler National Bank if they would agree to merge with Girard. In terms of the fair market value of the stock of these two banks, the premium offered by Girard was twice the value of the Ambler National stock.

The Ambler National Bank was merged with Girard on October 11, 1957. Ambler National Bank operated offices in Ambler, Flourtown, and Fort Washington.

The Ambler office of Girard does a residential banking business, and serves commercial customers and industrial customers.

(455) Prior to the merger of National Bank of Narberth with Girard, Girard had existing business in the area served by the three offices of Narberth.

Girard and National Bank of Narberth were competitors in the commercial banking business.

(456) The Upper Darby National Bank merged with Girard on April 25, 1958.

At the time Upper Darby National Bank was merged with Girard, Upper Darby operated its main office at 6912 Market St. and eleven branches in Delaware County.

(457) All of the banks acquired by Girard were competitors of Girard.

(458) The six mergers of Girard in the past ten years added the following offices, loans, and deposits:

Date	Bank	Number of offices	Loans (add 000)	Deposits (add 000)
6-15-51	Corn Exchange Natl. Bank & Trust	12	$96,791	$288,618
9-11-53	Natl. Bank of Germantown & Trust	1	9,781	35,371
1-22-54	North Phila. Trust	1	5,409	19,146
10-11-57	Natl. Bank of Narbeth	3	4,467	12,539
10-11-57	Ambler Natl	3	3,568	8,799
4-25-58	Upper Darby Natl	12	22,302	48,311

(460) In the foreseeable future, the president of PNB does not know how big a bank is needed to serve the needs of Philadelphia.

(461) PNB and Girard have already made surveys of possible sites for the opening of additional branch offices should the merger be approved.

VIII. Opinions Submitted on the Proposed Merger Under Section 18(c) of the Federal Deposit Insurance Act, as Amended.

(463) Pursuant to the provisions of section 18(c) of the Federal Deposit Insurance Act, as amended (12 U.S.C.A. § 1828(c)), the Federal Reserve Board, the Federal Deposit Insurance Corporation, and the Attorney General were required to submit reports on the competitive factors involved in the proposed merger to the Comptroller of the Currency. These reports were submitted; they have been admitted in this record as Exhibits G-161, G-163, and G-162.

(464) Each of these reports included an analysis of the effect of the proposed merger on banking competition in Philadelphia County and the three contiguous counties of Delaware, Montgomery and Bucks. Both of the banking agencies, as well as the Attorney General, concluded that the proposed merger would have a significant adverse effect on competition in the four county area. The conclusions of these reports are as follows:

A. Federal Reserve Board.

The Board of Governors of The Federal Reserve System asserted that the four counties of Philadelphia, Delaware, Montgomery, and Bucks is the primary banking area to be considered in appraising competitive factors of the proposed merger and concluded that the merger

would alter the present competitive balance between Philadelphia banks to a significant degree. The Board of Governors stated its conclusion as follows:

> The proposed consolidation of two of the three largest banks in the area would substantially lessen both existing and potential competition. The resulting bank would obtain a dominant position, with attending competitive advantages, strongly adverse to the preservation of effective competition.

B. Federal Deposit Insurance Corporation.

The Federal Deposit Insurance Corporation, in summarizing its appraisal of the competitive factors, stated that in Philadelphia and the three contiguous counties in which the Philadelphia banks can have branches, consummation of the proposal ". . . would adversely affect competition to a significant degree." The FDIC stated its final conclusion as follows:

> Therefore, it is concluded that the effect of the proposed consolidation on competition would be adverse as to Philadelphia and immediate suburbs but not adverse in the regional, national, and international fileds of competition.

C. The Attorney General.

The report on competitive factors submitted by the Attorney General of the United States concluded as follows:

> It is the conclusion of this Department that the proposed merger of The Philadelphia National Bank and the Girard Trust Corn Exchange Bank would result in a substantial lessening of commercial banking competition and a tendency toward monopoly in the ways described above. These adverse competitive effects of the merger would not be significantly offset by the

improved competitive position of the resulting bank in relation to the still larger banks in New York and a few other cities.

IX. Analysis of Reasons Advanced for the Merger.

A. Main Reasons Set Forth by Defendants.

Increased Lending Limit and Resources.

(465) PNB and Girard believe that by merging they will be able to increase the total deposits and lendable funds in Philadelphia through an increase in their financing of so-called national and international companies. As a result, they believe, they will have more money to meet the expanding credit needs of business and individuals in the Philadelphia area.

(466) The chief purpose the president of Girard envisioned in seeking to merge with PNB was the increase of deposits in Philadelphia banks which he thought would result from the enlarged bank's ability to attract regional and international business and keep Philadelphia business from going elsewhere for banking accommodations.

(467) The president of Girard considered that the extensive time and effort expended by Philadelphia banks each year in seeking to attract business away from their local competitors had resulted in little if any net gain for any of the banks.

(468) Defendants believe PNB-Girard combined would have the necessary capital resources to build business, improve personnel, increase advertising, establish specialized advisory departments, and better publicize the advantage to businessmen of establishing plants in the Philadelphia community. In their view PNB and Girard separately do not have the resources to be able to do all of these things.

FOREIGN DEPARTMENT OPERATIONS.

(469) PNB and Girard hope that through merger they will be able to expand the operations of their foreign department and in particular secure a larger share of the banking business connected with the port of Philadelphia.

COMPETITION FROM NEW YORK.

(470) PNB and Girard believe that through merger they will be better able to compete with the larger banks in nearby New York City for the business of large companies especially those located in or near Philadelphia.

B. Analysis.

(471) PNB and Girard are both substantial, well-run financial institutions.

(474) Both PNB and Girard are in strong financial condition at the present time and the decision to merge the two banks was not based on financial necessity.

In the Supreme Court of the United States

OCTOBER TERM, 1963

No. 799

UNITED STATES OF AMERICA, APPELLANT

v.

THE PHILADELPHIA NATIONAL BANK AND GIRARD TRUST CORN EXCHANGE BANK

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA

BRIEF OF THE UNITED STATES IN OPPOSITION TO THE MOTIONS TO AFFIRM

In the Jurisdictional Statement, it was demonstrated that substantial questions of major public importance are presented in this case. At issue are the standards of the Sherman Act governing horizontal mergers of competitors, in particular competing commercial banks, and their application to the proposed merger of the second and third largest commercial banks in the Philadelphia metropolitan area. Additional substantial questions in this case concern the applicability of Section 7 of the Clayton Act to bank mergers and, if applicable, the validity of the proposed merger under Section 7. It was further

resulting increase in size or market share (PNB Mot. 12; Gir. Mot. 14), unless and until the merged company attains the power to control or restrict the market. This proposition is explicitly advanced by Girard (Gir. Mot. 13–14) and underlies the reliance of both appellees upon testimony and market data concerning the continued existence of other competing Philadelphia area banks (PNB Mot. 9, 10, 12; Gir. Mot. 16, 18–19).

But Section 1 of the Sherman Act imposes a much more restrictive rule upon horizontal mergers. The power to control prices or exclude competitors is the touchstone of monopolization in violation of Section 2 of the Sherman Act,[2] not of a restraint of trade violating Section 1. The railroad cases reviewed in the Jurisdictional Statement, pp. 20–21, struck down mergers of competing companies on the express ground that the elimination of competition between the merging companies, in the circumstances, was sufficient to constitute an unreasonable restraint of trade notwithstanding the continued existence of other competitors. In *United States* v. *Columbia Steel Co.*, 334 U.S. 495, relied upon by appellees, the Court also examined the extent to which competition would be diminished. The Court did not rule that power to control the market was required in order to show a violation; nor did the Court even list such power among the factors pertinent to an appraisal of the validity of mergers under Section 1, namely, dollar volume, percentage of business controlled, strength of

[2] See *United States* v. *duPont & Co.*, 351 U.S. 377, 391.

remaining competition, purpose of the merger, and probable development of the industry (334 U.S. at 527–528). Stating that "[t]he relative effect of percentage command of a market varies with the setting" (*id.* at 528), the Court in *Columbia Steel* held that certain market conditions established the lawfulness of a combination of companies selling (it was doubtfully assumed) 13% and 11% of structural steel products in eleven western states (*id.* at 529–530). In the Jurisdictional Statement, pp. 22–28, it was shown that an analysis of the same factors considered by the Court in *Columbia Steel* leads to the finding of unreasonable restraint in the present case.

In *Columbia Steel*, as appellees note (PNB Mot. 9–10; Gir. Mot. 16, fn.), the Court distinguished the railroad merger cases cited by the government. Appellees ignore, however, that the Court likewise distinguished various merger cases cited by the steel companies and stated that the precedents relied upon by both parties were factually "so dissimilar * * * that they furnish little guidance" (334 U.S. at 531). *Columbia Steel* is not inconsistent with the railroad merger cases and does not impair their vitality in the analogous situation here presented, that of the merger of two great banks with assets of one billion and three-quarters billion dollars, which are directly competitive throughout their operations.[3]

[3] In addition to *Columbia Steel*, Girard, by citing two quite inapposite cases, seeks to support the proposition that elimination of competition is not enough to violate the Sherman Act. *Appalachian Coals, Inc.* v. *United States*, 288 U.S. 344, did not involve a merger but an association of firms to meet a depres-

2. Appellees are unduly modest when they describe the market position of the proposed merged bank as only "one bank out of 41 [which] is larger than any of the others in the Philadelphia area" (Gir. Mot. 14; see PNB Mot. 12). The fact is that the proposed merger of the second and third largest banks in the area would result in a leading bank more than one-and-a-half times the size of its nearest rival and more than three times the size of the next largest bank. The merged bank would have 35.7% of the assets held by the 41 commercial banks with head offices in the four-county Philadelphia area, 40.8% of their commercial and industrial loans, 35.8% of their deposits. (See Jur. St., pp. 5–8.)

Moreover, there is no substance in appellees' disclaimer that preponderant size offers no competitive advantage over the smaller Philadelphia banks (PNB Mot. 12; Gir. Mot. 14). Their argument in this regard conflicts with their own proposed findings as to some of the alleged benefits from the merger—for example, that the merged bank would be able to make "greater risk loans" (Defs. Fdg. 201). The merged bank would have power and influence commensurate with its size, far greater than the much smaller banks numbered by appellees among their 40

---

sion-borne crisis in the coal industry. *Erie Sand & Gravel Co.* v. *Federal Trade Commission*, 291 F. 2d 279 (C.A. 3), involved the validity of a merger under Section 7 of the Clayton Act; but the Third Circuit did no more than remand to the Commission to reconsider its determination in the light of a necessary correction in the geographic market, conceded by the Commission.

competitors. Thus, PNB-Girard, with almost $1 billion in lendable funds, would be a controlling factor in a great number of economic decisions. Smaller banks, with a few million dollars in lendable funds, would exhaust their resources in a comparatively few transactions, and they could not provide effective competitive alternatives. (See Jur. St., pp. 23–25.)

Appellee Girard's idea of effective competition is aptly illustrated by its assertion (Gir. Mot. 16) that "three was the largest number of alternative [banking] choices said by any witness to be necessary to provide every competitive advantage to a prospective borrower." The only testimony is that access to three banks will determine whether a loan is "bankable" (see Tr. 2913–2914, 3362). Once bankable, however, there would still remain a wide range of possible credit appraisals, loan amounts, interest rates, repayment and other terms. Although Girard urges that "competition among banks is, for practical purposes, restricted to service" (Gir. Mot. 14), the importance of banking competition was recently reemphasized by the Federal Reserve Board. The Board denied an application to merge the Long Island Trust Co. with the Chemical Bank New York Trust Co., on the ground that the proposed merger "would reduce the opportunity for preserving a variety of banking alternatives of varying size, each offering its own advantages to the public. Competition throughout all the ranges of banking size and services is in the public interest. * * * The merger would eliminate a prosperous and sound alternative source of banking serv-

ices, and would substitute for it a large and powerful institution which would, in competing with other such institutions, diminish the prospects of smaller banks in the County." *In the Matter of the Application of Chemical Bank New York Trust Co.*, Federal Reserve Board, April 30, 1962, pp. 14, 15. Thus, the governmental authorities which supervise banks believe it imperative to preserve the precise kind of banking competition which appellees insist is insignificant.[4]

3. The discussion of "the percentage of business controlled"[5] by the proposed merged bank in the Jurisdictional Statement, pp. 5–8, 22–23, was based upon extensive statistical data in the record, which compared the two appellees and the proposed merged bank with the other commercial banks having head offices in the Philadelphia area. The district court accepted these data in its analysis of the four-county market (Jur. St. App. 6a–7a, 34a–35a).

---

[4] Girard's confidence in the adequacy of three banks may be contrasted to the Congressional understanding of what constitutes effective competition, expressed in amending Section 7 of the Clayton Act in 1950. The Senate Report noted, quoting a Federal Trade Commission report, that a market containing only "three or four large concerns" is an oligopoly which "is likely to be characterized by avoidance of price competition and by respect on the part of each concern for the vested interest of its rival." S. Rep. No. 1775, 81st Cong., 2d Sess., p. 5. The policy of Section 7 is relevant to interpretation of the Sherman Act. See *United States* v. *Columbia Steel Co.*, 334 U.S. at 507, fn. 7; *Times-Picayune* v. *United States*, 345 U.S. 594, 610–611.

[5] *United States* v. *Columbia Steel Co.*, *supra*, 334 U.S. at 527.

Appellees challenge the government statistics on two grounds (PNB Mot. 11; Gir. Mot. 17). First, they object that the government utilized total figures for assets, loans, deposits, etc., of the Philadelphia-area banks, rather than only that part of the banks' business which originated within the area. But the predominant share of the proposed merged bank in the aggregate business done by Philadelphia-area banks does not appear materially different if confined to local business.[6] In any event, the government believes that total figures were properly used to present an accurate picture of the relative strength of the relevant banks.

Second, appellees contend that the government's statistics fail to account for business originating within the four-county Philadelphia area which is handled by banks in New York and elsewhere. But again, this characteristic of the statistics does not detract from the significance of PNB and Girard's market shares. Appellees' witnesses offered little more than speculation together with general statements concerning solicitation of business by outside banks from the Philadelphia area (*e.g.*, Tr. 3102, 3450–3451, 3709, 3751–3753). The only statistical information in the record indicates that in 1955 the large New York banks had only about

[6] The distribution of PNB and Girard business within and without the four-county area is shown in the record (Statistical Tables in Govt. Proposed Fdgs. 258–282), and there is no reason to believe that the other large banks have a much different distribution. The smaller banks are likely to have less activity outside the area, but the relative amount of their business is so small that it would not materially alter the shares of PNB and Girard utilized by the court below.

$113,000,000 in loans to Philadelphia customers (Ex. D–1, p. 65, n. 3; compare Jur. St. 6–7). Moreover, banks outside the area are competitive only for a very special kind of business, particularly large loans. As Girard's president stated, borrowers of under $1 million would not normally go beyond banks in the same city (Tr. 3817). The president of the Philadelphia area's fifth largest bank testified that he had not lost business to New York banks (Tr. 2071–2072). As a practical matter, banks elsewhere are certainly not available alternatives for the range of services comprising commercial banking, the line of commerce found by the district court.

In the Jurisdictional Statement, pp. 16–18, the four-county Philadelphia area was shown to be a proper geographic market in which to analyze the impact of the merger, and, as the Federal Reserve Board stated, "[T]he principal competitive effects of the proposal will * * * be local and not international or national" (Ex. G–161, p. 2). In examining these "principal competitive effects," the government properly focused on the "local" market comprising commercial banks in the Philadelphia area and presented statistics showing the relative positions of PNB, Girard and the proposed merged bank among the four-county banks. These data, and the other evidence in the record outlined in the Jurisdictional Statement, show that the proposed merger is an

unreasonable restraint of trade in violation of the Sherman Act.

For the foregoing reasons, and for the reasons set forth in the government's Jurisdictional Statement, probable jurisdiction should be noted.

Respectfully submitted.

MAY 1962.

Girard's alleged "Summary of Evidence" (Gir. Mot. 22-24) is incomplete and misleading. To take one of many examples, Girard cites the president of Central Penn National Bank as saying that competition from New York is very strong (Gir. Mot. 24), but omits his testimony that he had not lost any loans or deposits to New York banks (Tr. 2071-2072).

No. 83

UNITED STATES OF AMERICA, APPELLANT

v.

THE PHILADELPHIA NATIONAL BANK AND GIRARD TRUST CORN EXCHANGE BANK

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA

BRIEF FOR THE UNITED STATES

OPINION BELOW

The opinion of the district court (R. 3629) is reported at 201 F. Supp. 348.

JURISDICTION

The judgment of the district court was entered on January 15, 1962 (R. 3669) and the notice of appeal was filed on February 26, 1962 (R. 3671). This Court noted probable jurisdiction on May 21, 1962 (R. 3673; 369 U.S. 883).

The jurisdiction of this Court is conferred by Section 2 of the Expediting Act of February 11, 1903, 32 Stat. 823, as amended, 15 U.S.C. 29.

QUESTIONS PRESENTED

The principal questions presented are:

1. Whether the agreement to merge The Philadelphia National Bank and Girard Trust Corn Exchange Bank involves a combination in unreasonable restraint of trade prohibited by Section 1 of the Sherman Act.

2. Whether the proposed merger violates Section 7 of the Clayton Act because its effect may be substantially to lessen competition or to tend to create a monopoly.

The following subsidiary questions are also presented:

3. Whether the anti-competitive effects of the merger are to be measured by its effects in Philadelphia and the three contiguous counties, which is not only the area in which all of the defendants' offices are located but also the area for which their banking services are preponderantly rendered.

4. Whether the proposed merger is subject to Section 7 of the Clayton Act.

STATUTES INVOLVED

Section 1 of the Sherman Act, 26 Stat. 209, as amended, 15 U.S.C. 1, provides in pertinent part:

> SEC. 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is declared to be illegal * * *. Every person who shall make any contract or engage in any combination or conspiracy declared * * * to be illegal shall be deemed guilty of a misdemeanor * * *.

Section 7 of the Clayton Act, 38 Stat. 731, as amended, 64 Stat. 1125, 15 U.S.C. 18, provides in pertinent part:

> SEC. 7. No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.
>
> * * * * *

Section 18(c) of the Federal Deposit Insurance Act is set forth in the Appendix, *infra*, pp. 83–84.

STATEMENT

This is a civil proceeding brought by the United States under Section 4 of the Sherman Act and Section 15 of the Clayton Act, 15 U.S.C. 4, 25, to enjoin a proposed merger of The Philadelphia National Bank ("PNB") and Girard Trust Corn Exchange Bank ("Girard"). The government charged that the defendants had entered into an agreement to merge which constitutes a combination in unreasonable restraint of trade, in violation of Section 1 of the Sherman Act, and that the merger, if carried out, might have the effect of substantially lessening competition or tending to create a monopoly, in violation of Section 7 of the Clayton Act. The suit was in-

stituted immediately following consent to the proposed merger by the Comptroller of the Currency.[1]

Following trial of the issues, the district court dismissed the complaint upon the ground that no antitrust violation had been established. No actual merger has as yet been effected nor, under the stipulation of the parties, will there be any merger pending determination of the present appeal.

DEFENDANTS' LEADING POSITION AND THEIR GROWTH BY MERGER

PNB and Girard are old, established Philadelphia banks, and today rank second and third in size among the banks of that city (Fdgs. 7, 12, 394, R. 3326, 3327–8, 3416).[2] At the end of June 1960 PNB's total assets were over $1,000,000,000, and those of Girard over $740,000,000 (Fdg. 93a, R. 3501). Their combined assets constitute more than 39 percent of the total

[1] Under Section 18(c) of the Federal Deposit Insurance Act, as amended by the Bank Merger Act of 1960 (Appendix, *infra* p. 83) no bank insured under the Act may merge or consolidate with another insured bank (where the continuing bank is to be a national bank) without prior consent by the Comptroller.

[2] The findings of fact requested by the Government were numbered 1 to 600 (R. 3325–3478), and those requested by the defendants were numbered 1 to 207 (R. 3489–3518). The district court affirmed, by number, certain of the findings so requested (R. 3664–5). To distinguish affirmed Government-requested findings from affirmed defense-requested findings, as to the latter the letter "a" will follow the finding number. *E.g.*, Fdg. 1 refers to the finding numbered 1 in the Government's request and Fdg. 1a to the finding numbered 1 in the defendants' request.

GX will be used to designate Government exhibits, and DX to designate defense exhibits.

assets of all Philadelphia commercial banks (GX 8, R. 2362). Both have excellent management (R. 843) and are in a strong financial condition (Fdgs. 11, 15, R. 3327, 3328). They render, and compete with each other in rendering, all recognized types of banking service.[3]

Each bank has been a party to numerous mergers, which have enabled each vastly to increase its resources, to build up many aspects of its banking service, and to acquire many new branches and thereby comprehensively cover the four-county area outside of which a bank having Philadelphia headquarters is not permitted to operate.[4]

The defendants' merger history, as set forth in their application to the Comptroller for approval of their merger (GX 57, R. 2423), is, in brief outline, as follows:

In 1926 the fourth largest bank in Philadelphia merged with PNB, then "much the largest bank" in the city (R. 2440). There followed two years later a

[3] These include granting both secured and unsecured loans to corporations and individuals; handling demand deposits, time deposits, and savings accounts; administering trusts for both individuals and corporations (including pension and profit sharing funds); acting as correspondent for out-of-city banks; acting for corporations as fiscal agent, stock transfer agent, bond and coupon paying agent, etc. (Fdgs. 316–372, R. 3401–10).

[4] The district court correctly stated that Pennsylvania law permits a commercial bank to have offices only in the political community (county) in which its main office is situated and any county contiguous thereto (R. 3652). The counties to which a Philadelphia bank is thus confined are Philadelphia (coterminous with the city of Philadelphia), Bucks, Delaware and Montgomery (*ibid.*).

merger with another bank (itself the product of a recent merger), the merging banks being Philadelphia's "two biggest national banks" (R. 2441). During the years 1951–1958 PNB merged with nine additional banks, two of which had Philadelphia headquarters and the other seven, headquarters in one or the other of the three contiguous counties (R. 2441–4).

Girard's first significant merger came in 1951 and involved a Philadelphia bank which was ahead of Girard in total assets, in deposits, and in loans, and which also had 12 strategically located city offices (R. 2445–6). The merger path was resumed in 1953, again in 1954, and was further pursued in 1957 and 1958 (R. 2446–8). Thereby there came into the Girard fold two Philadelphia banks, two banks with offices in Montgomery County, and one bank with offices in Delaware County (R. 2446; Fdgs. 452, 456, R. 3440, 3442).

Most of the growth of each defendant since the early 1950's has been the result of mergers, that is, of the absorption of competitors. Thus, at the time the present action was commenced PNB had 27 offices, 18 of which, or two-thirds, had been acquired by merger (Fdgs. 7–8, R. 3326). Of Girard's 38 present offices, 32, or 84 percent, came to it by way of merger (Fdgs. 12–13, R. 3328). The showing as to assets is similar. For the 10-year period 1950–1959 inclusive, mergers contributed 59 percent of PNB's growth and 85 percent of Girard's growth (GX 197, R. 2904).[5]

[5] PNB: Total growth, $321,547,000; growth by merger, $189,840,000. Girard: Total growth, $515,919,000; growth by merger, $438,597,000 (R. 2904).

Coincident with the foregoing merger-attributable growth on the part of the defendants, there has been a steep, almost spectacular, decline in the number of commercial banks (1) in Philadelphia and (2) in the overlapping four-county area. There were 33 commercial banks with Philadelphia headquarters in 1950, 20 in 1955 and only 14 in 1960, a 58 percent decline in this 10-year period (GX 183, R. 2878). The number of commercial banks with headquarters in the four-county area fell from 108 in 1947 to 42 in 1960, a 61 percent decline (GX 184, GX 185, R. 2879).

THE PROPOSED MERGER AND THE ACTION TAKEN THEREON

The defendants had discussed a merger of their banks "seriously and at great length" early in 1956 (GX 57, R. 2437), following a 1955 merger of two other Philadelphia banks which ousted PNB from its position as the largest bank in Philadelphia (R. 843). The discussions were discontinued because in the opinion of both bank managements a further "shake-down period" was necessary for a sound evaluation of the respective banks' potential earning power, and to work out minor operating problems, following prior mergers to which both banks had been parties (GX 57, R. 2437–8).

Merger negotiations were resumed in April 1960 and eventuated in agreement (Fdgs. 20–21, R. 3331). The basic agreement was that the banks merge or consolidate under the charter of PNB, that PNB shares remain outstanding as shares of the merged bank, and that each Girard share be converted into 1.2875 shares

of the merged bank (GX 117, R. 2717; GX 119, R. 2719, 2721-2). The merger proposal thus negotiated was presented to and approved by the boards of directors on November 15, 1960, and application for consent of the Comptroller of the Currency was filed in Washington on the same day (Fdg. 22, R. 3331).

The Bank Merger Act (Appendix, *infra*, p. 83), makes bank mergers illegal without consent thereto by the Comptroller, the Federal Reserve Board, or the Federal Deposit Insurance Corporation ("FDIC"),* and requires the banking agency authorized to grant or withhold consent to take into consideration, in addition to certain specified banking factors,† "the effect of the transaction on competition (including any tendency toward monopoly)." Furthermore, the Act provides that "[i]n the interests of uniform standards," the agency whose consent is sought shall, before acting on a proposed merger, request a report on "the competitive factors involved" from the other two banking agencies empowered to pass on bank mergers and the Attorney General.

---

* Where, as here, the resulting bank is to be a national bank the consent which is requisite is that of the Comptroller. About one-third of the banks in the United States are national banks. Mergers where the resulting bank is under state charter are subject to the consent of the Federal Reserve Board (if the resulting bank is a member of the Federal Reserve system) or of the Federal Deposit Insurance Co. (if the resulting bank is a nonmember insured bank).

† These factors are similar to those governing the issuance of certificates set forth in Section 6 of the Federal Deposit Insurance Act, 12 U.S.C. 1816. See S. Rep. 196, 86th Cong., 1st Sess., p. 2.

Since the Comptroller did not order a public hearing on the PNB-Girard application,* the facts and considerations which he had before him were those presented *ex parte* by the applicants, such further facts and views as his staff may have developed and presented, and the reports on competitive effect submitted by the Federal Reserve Board, FDIC, and the Attorney General.

The report of the Federal Reserve Board is GX 161 (R. 2822). The Board stated that the competitive effect of the proposed merger was to be judged with reference to competitive impact in the four-county Philadelphia area (R. 2823–4, 2828–30). It said that PNB and First Pennsylvania Banking & Trust are at present "fairly close to being equal in competitive power", and that the next three banks "are not so far behind as to be unable to furnish them with strong competition", but that on consummation of the proposed merger "this situation would change sharply," and the resulting bank "would be far ahead of any other bank" (R. 2831–3). The extent to which the present relatively balanced competitive situation would be altered should the merger be effected was illustrated, the Board said, by taking the total de-

*While the Bank Merger Act does not require a hearing on applications for consent to a merger, the Federal Reserve Board has ordered public hearings on certain applications involving interests of considerable magnitude (comparable to the PNB-Girard application), on the ground that it was in the public interest to afford interested persons an opportunity to express their views and opinions in a public hearing before the Board. Subsequent to the PNB-Girard merger, the Comptroller's office also has held public hearings on some important merger applications.

posits of the bank with the largest deposits as 100 and comparing them percentagewise, before and after merger, with the deposits of the nearest competitors. The comparison thus made showed (R. 2833):

	Before Merger	After Merger
Bank No. 1	100	100
Bank No. 2	97	62
Bank No. 3	65	28
Bank No. 4	45	26
Bank No. 5	42	15

The Board's conclusion was that the proposed merger "would substantially lessen both existing and potential competition"; and that the resulting bank "would obtain a dominant position, with attending competitive advantages, strongly adverse to the preservation of effective competition" (R. 2834).

The FDIC report (GX 163, R. 2845), while recognizing that the defendant banks serve the "Delaware Valley" area to some extent, stated that for the purpose of scheduling "competing banks" only those in the four-county Philadelphia area were to be included (R. 2848). The report noted that in the 10-year period, 1950–1959, inclusive, the number of banks in that area had fallen more than 50 percent and that the seven largest banks had increased their share of the area's total commercial bank resources from about 61 percent to about 90 percent (R. 2850). It concluded that merger of the second and third largest Philadelphia banks would "contribute further" to this "trend in concentration" and resulting "lessening of competition," and would "adversely affect competition to a significant degree" (R. 2857).

The Attorney General in his report (GX 162, R. 2834) reached the following conclusions concerning the competitive effect of the proposed merger in the four-county Philadelphia area: (1) The proposed new bank would obtain important competitive advantages over smaller banks and its creation would probably lead to further realignments by way of merger. (2) There would be a substantial increase in banking concentration and tendency toward monopoly. (3) An important alternative source of banking services would be eliminated. (4) The substantial existing competition between the applicant banks would be eliminated (R. 2844–2845).

The Comptroller gave his consent to the proposed merger on February 24, 1961, despite the adverse reports of the other agencies, and the United States filed its complaint the following day (Fdgs. 27–28, R. 3334). The Comptroller's statement of the basis for his approval of the merger, incorporated in his annual report to Congress, shows that he concluded that, in view of the "beneficial" effects of the merger upon international and national competition, "the over-all effect upon competition would not be unfavorable" (GX 164, R. 2861).* In this statement he fur-

*The Bank Merger Act requires each of the banking agencies authorized to act thereunder to set forth in its annual report to Congress the mergers to which it has given its consent, together with a "statement * * * of the basis for its approval" (App., *infra*, p. 84). We refer above to the Comptroller's "statement" concerning his PNB-Girard merger ruling, included in his annual report to Congress, because this statement furnishes the only information as to the grounds for the ruling. At the time the ruling was made it was not the

ther said that the bank created by merging Philadelphia's second and third largest banks "would be in the first rank of American financial institutions," and "would be far better able to serve the convenience and needs of its community by being of material assistance to its city and state in their efforts to attract new industry and to retain existing industry" (*ibid.*).

THE DISTRICT COURT'S DECISION

After a two-months trial commencing on June 5, 1961, the district court on January 15, 1962, filed an opinion holding that no antitrust violation had been established.

The court held, with respect to the applicability of the antitrust laws, (1) the Comptroller's consent to the merger of the defendants, as required by the Bank Merger Act, did not exempt the merger from the antitrust laws (R. 3638–42); and (2) the prohibitions of Section 7 of the Clayton Act do not run, as to banks, against asset acquisitions; the proposed merger involved an asset acquisition; and it therefore was not within Section 7 (R. 3642–6). Although the latter holding left open only the issue of violation of section 1 of the Sherman Act, the court stated that, in the interest of a final determination of all antitrust violations charged in the complaint, it would rule on these

---

practice of the banking agencies to file any formal opinion or report in support of rulings on merger applications, and the letter notifying PNB of the Comptroller's favorable ruling merely stated that, after considering the various factors referred to in the Bank Merger Act, he had found that the merger "will be in the public interest" (DX 14, R. 3049).

charges on the *arguendo* assumption that the Clayton Act "is applicable in all respects" (R. 3646).

The court agreed with the government that commercial banking was a relevant product market, but rejected the government's contention that the relevant geographic market was the four-county Philadelphia area, and indicated that the market "at the very least" comprised five Pennsylvania and three New Jersey counties, "or the ten-county area referred to by the defendants[10] and definitely New York City"; and probably encompassed "the greater part of the northeastern United States" (R. 3653–4). The remainder of the court's decision was based on the *arguendo* assumption that the Philadelphia four-county area was the relevant geographic market (*ibid.*).

The court discussed what it considered to be the "relevant factors" under Section 7 of the Clayton Act (R. 3655–3661) and concluded that the merger would not violate Section 7 because:

> In summary, it can be said that although the merger will increase concentration to the percentage figures given,[11] the merged bank would have no power to control the price and supply of credit, nor could it dominate the market in any manner. And, although a direct substantial competitor will be eliminated, the only competent testimony upon the subject estab-

[10] This ten-county area comprised the four-county Philadelphia area and "portions" of six out-of-state counties, five in New Jersey and one in Delaware (GX 57, R. 2487).

[11] The reference is to the court's findings, at R. 3657, that the merged bank would have 37 percent of all the assets, 34 percent of all the loans, and 36 percent of all the deposits of all commercial banks with head offices in the four-county area.

lishes that competition will be more vigorous after the merger. Also, although the commercial banking field is not an easy one to enter, it cannot be concluded that a new bank will not be established in the four-county area in the future. Finally, although the defendants have engaged in prior mergers, these mergers have had valid business purposes as the motivating force.

The court summarily disposed of the Sherman Act charge by saying that a merger which does not violate the former statute "can hardly be held to violate the more stringent standards" of the latter (R. 3662). In addition, the court held that any restraint of trade resulting from the merger met the "reasonable" test of the Sherman Act (R. 3663) under the standards set forth in *United States* v. *Columbia Steel Co.*, 334 U.S. 495.

SUMMARY OF ARGUMENT

I

In the absence of immunity, banking is subject to the antitrust laws, like any other form of interstate and foreign commerce. No such immunity was provided in the Bank Merger Act. Congress imposed an additional check on banking concentration, by requiring consent of designated federal agencies for mergers, but made clear that this "would not in any way affect the applicability" of the antitrust laws. S. Rep. 196, 86th Cong., 1st Sess., p. 3. No implied exemption arises from the mere existence of regulatory approval of mergers. See *California* v. *Federal Power Commission*, 369 U.S. 482. Moreover, contrary to the be-

lief of the district court, the force of the antitrust laws as to mergers is not limited by the existence of regulatory control over some other aspects of banking.

II

Preliminary to determining whether the merger of Philadelphia National and Girard violates the antitrust laws, it is necessary to determine the area of effective competition—both as to the product market and the geographic market.

A. The district court correctly held that, in this case, commercial banking is the most relevant "product" market. PNB and Girard compete with each other in every aspect of their commercial banking business. From the standpoint of customers, commercial banking provides unique services which pervade its functions and no other financial institution is reasonably interchangeable with it.

B. Contrary to the decision below, the Philadelphia four-county area—in which defendants primarily operate—is the most relevant geographic market in which to consider the effects of the merger on competition. All of defendants' banking offices are located within the four-county area (as required by law), and by far the greater part of their deposits, loans and trust accounts originate within it. Defendants' justifications of their prior expansion by mergers demonstrate that banking customers need and deal generally with local banks. And in their reports on this merger, the Federal Reserve Board and the Federal Deposit Insurance Corp. stressed that the principal competitive impact would fall within the four-county area.

Since the great majority of banking customers in the four-county area can turn only to banks in this area for the services they need, the four-county area is the relevant market.

III

The proposed merger of the second and third largest banks in the market, which together control more than one-third the business, violates Section 1 of the Sherman Act.

A. The proposal to merge PNB and Girard would unite two huge, thriving banks which actively compete with each other for a vast volume of business. All of this competition, which embraces every aspect of defendants' business, would be completely eliminated by the merger. The record dramatizes this fact by showing the present vigorous competition between PNB and Girard and the adverse impact upon their customers from eliminating it.

The guiding principles under the Sherman Act are set out in a series of decisions from *Northern Securities Co.* v. *United States,* 193 U.S. 197, to *United States* v. *Southern Pacific Co.,* 259 U.S. 214, in which the Court invalidated mergers of major railroads because of the elimination of the merging companies' *inter sese* competition, without reference to the scope and strength of remaining competition. These authorities are determinative of illegality here.

The controlling force of the railroad merger cases is not diminished by the more recent decision in *United States* v. *Columbia Steel Co.,* 334 U.S. 495, upholding an acquisition by U.S. Steel of a western

steel fabricator. In dealing with the horizontal effects of that transaction, the Court did not hold that elimination of *inter sese* competition by merger can never of itself violate Section 1. Stressing the uncertainty and lack of significance of the government's showing as to the companies' market shares, the Court indicated various factors bearing upon the substantiality of competition which were to be considered. In these circumstances, the Court held that the factual situations in the railroad cases were too "dissimilar" to furnish guidance on whether "the competition which will be eliminated" in the case before it was "sufficient". Here, in contrast, there is no question that very substantial competition is being eliminated in the merger of PNB and Girard and this in itself is sufficient to establish the violation.

B. Moreover, even if *Columbia Steel* requires examination of other market factors, such examination confirms the conclusion that the proposed merger is unlawful. The merger would accelerate a dangerous trend towards concentration in banking. In ten years (1950–1960), mergers have reduced by 61 percent the number of commercial banks with head offices in the Philadelphia four-county area. If this merger of the second and third largest banks in the area is valid, the Sherman Act is no bar to elimination of all but a few firms.

The immediate dominance of the merged PNB-Girard is striking in absolute and relative terms. The merged bank would have 36 percent of all deposits, 34 percent of all net loans, and 37 percent of all bank-

ing assets. While 41 banks would remain in the area after this merger, by far the greater number of these are much smaller institutions and emergence of such a dominant firm would be to the detriment of banking customers and to the smaller competing banks. Finally, no mitigating factors justify the restraint on competition. Even if such factors were relevant, which we deny, the evidence refutes defendants' contentions that the merger will significantly increase competition for very large loans (above $8,000,000) or will substantially benefit Philadelphia by bringing new business to the area. Defendants' hypothetical benefits cannot outweigh the restraint to competition, and the injury to existing customers, which would clearly result from the merger.

IV

A. Section 7 of the Clayton Act applies to this merger. As amended in 1950, Section 7 prohibits stock and asset acquisitions having the proscribed anticompetitive effects, but the clause covering asset acquisitions is limited to corporations under the jurisdiction of the Federal Trade Commission and, therefore, does not extend to banks. The congressional purpose in 1950 to check the tide of mergers precludes treating a statutory merger as an "assets" acquisition since this would exempt banks and other important economic interests from the antimerger prohibitions contained in Section 7. Moreover, statutory mergers are very different from asset acquisitions. A merger provides for the bringing together of two going concerns by the exchange of stock; in essential elements, it closely re-

sembles stock acquisitions. A merger similar to the one here was treated by this Court as a stock acquisition for Section 7 purposes in *Brown Shoe Co.* v. *United States*, 370 U.S. 294.

B. In *Brown Shoe Co.*, this Court formulated the criteria governing the lawfulness of mergers under Section 7. Applying these tests, the proposed merger plainly violates Section 7.

ARGUMENT

I

BANK MERGERS, LIKE ANY OTHER MERGERS AFFECTING INTERSTATE COMMERCE, ARE SUBJECT TO THE PROHIBITIONS OF THE ANTITRUST LAWS

It is well settled that, in the absence of immunity, banking as well as every other form of interstate and foreign trade is subject to the antitrust laws. In *United States* v. *South-Eastern Underwriters Association*, 322 U.S. 533, 553, the Court said in describing the Sherman Act:

> Language more comprehensive is difficult to conceive. On its face it shows a carefully studied attempt to bring within the Act every person engaged in business whose activities might restrain or monopolize commercial intercourse among the states.
>
> A general application of the Act to all combinations of business and capital organized to suppress commercial competition is in harmony with the spirit and impulses of the times which gave it birth. * * *

Finding no conclusive evidence that Congress "specifically intended to exempt insurance companies from the all-inclusive scope of the Sherman Act" (p. 560), the Court held that they were subject to that Act because (p. 561):

> Having power to enact the Sherman Act, Congress did so; if exceptions are to be written into the Act, they must come from the Congress, not this court.

This precept is as applicable to banking as it is to insurance. It is also as true of the Clayton Act as it is of the Sherman Act. In *Transamerica Corp.* v. *Board of Governors of Federal Reserve System*, 206 F. 2d 163, 166 (C.A. 3), certiorari denied, 346 U.S. 901, in rejecting the claim that Congress did not intend the Clayton Act to apply to banks, the court said:

> We find nothing in the legislative history, however, to indicate that Congress did not intend by Section 7 to exercise its power under the commerce clause of the Constitution to the fullest extent. The avowed purpose of the Clayton Act was to supplement the Sherman Act, 15 U.S.C.A. §§ 1–7, 15 note, by arresting in their incipiency those acts and practices which might ripen into a violation of the latter act. Since the general language of the Sherman Act was designed by Congress "to go to the utmost extent of its constitutional power in restraining trust and monopoly agreements" * * * the supplemental general language of the Clayton Act was undoubtedly intended to have the same all inclusive scope.

A. THE BANK MERGER ACT, WHICH PROHIBITS BANK MERGERS UNLESS A DESIGNATED FEDERAL BANKING AGENCY HAS CONSENTED THERETO, DOES NOT EXEMPT FROM THE ANTITRUST LAWS MERGERS FOR WHICH THE REQUIRED CONSENT HAS BEEN GIVEN

1. The court below properly held that its jurisdiction under the antitrust laws was not impaired by passage of the Bank Merger Act of 1960. In so holding, the court relied primarily on the statements, contained in both the House and Senate Committee Reports on the bill, that the Act would not affect "in any way" the application of the antitrust laws to bank mergers; these statements, the court thought, were "much too explicit to be ignored or explained away" (201 F. Supp. at 357). We submit that the district court's decision, in this respect, was entirely correct.

The legislative history of the Bank Merger Act shows plainly that Congress considered the two sets of statutes to be complementary rather than repugnant. The Bank Merger Act was enacted because Congress was deeply concerned over the unchecked tide of bank mergers and because it was dissatisfied both with the liberality of the banking agencies in approving mergers and with the failure of the Department of Justice to attack bank mergers under the antitrust laws. Thus, the Senate Report (S. Rep. No. 196, 86th Cong., 1st Sess., 1959) stated:

> Bank mergers are generally considered to be covered by the restrictions of the Sherman Antitrust Act, but up to this year, no proceeding under the Sherman Antitrust Act had been instituted which involved a bank merger or consolidation. * * * [p. 4]

> In short, at the present time many, perhaps most, bank mergers can proceed with little or no consideration of competitive factors. [p. 2]
>
> * * * * * *
>
> The large numbers of mergers in recent years, the vast resources involved in these mergers, and the increases in the size of the largest banks, particularly those which have grown through mergers, all give rise to concern for the maintenance of vigorous competition in the banking system and in the industry and commerce served by the banking system. [p. 8]

Motivated by a purpose of imposing an *additional* check on the processes of concentration in the banking industry, Congress was careful to make it clear that the new act would not defeat the application of the most significant existing check, the antitrust laws. Thus, Senator Robertson, sponsor of the Bank Merger Act and Chairman of the Senate Committee on Banking and Currency, which reported the bill, stated:

> The bill seeks to make mergers of banks more difficult. As I have previously said, the bill does not affect in any way the present antitrust laws. [105 Cong. Rec. 8131.]

For these reasons both the Senate and House Committee Reports on the bill stated in virtually identical language that "S. 1062 would not in any way affect the applicability" of the antitrust laws to bank mergers. Senate Report, *supra*, at p. 3; H. Rep. No. 1416, 86th Cong., 2d Sess., 1960, p. 9.

In sum, the Bank Merger Act was addressed to the agencies with regulatory powers over banks, not to the courts in antitrust cases. Congress plainly

contemplated that particular mergers might pass muster under the Bank Merger Act and nevertheless be invalidated under the antitrust laws. Accordingly, there is no room for the argument that the antitrust laws were displaced in whole or part by the Bank Merger Act.[12]

2. Even if the legislative history of the Bank Merger Act were less clear, there would be no basis for the appellees' contention below that, despite the lack of a specific exemption, the Act impliedly exempted approved mergers from the antitrust laws because antitrust standards must be deemed to be

[12] Defendants also argued below that an intention to grant exemption could be inferred from the defeat of a proposed amendment to the Bank Merger Act which would have added an antitrust "savings" clause. Neither the debate on that clause nor its outcome establishes any such intention on the part of Congress. Indeed, Congressman Celler, the author of that proposal, specifically stated:

> In these circumstances, I suggest—*solely for the purpose of clarification*—an "antitrust savings" clause identical with that contained in section 11 of the Bank Holding Company Act and providing that nothing in the bill supersedes any provision of the antitrust laws.
>
> *While such a provision would not add to the bill from a substantive standpoint*, it would avoid needless controversy and possible litigation involving the contention that the strictures of the Sherman and Clayton Acts had been nullified by the provisions of the pending bill. [Hearings on S. 1062 before Subcommittee No. 2, House Committee on Banking and Currency, 86th Cong., 2d Sess., 1960, pp. 146–147; emphasis added.]

See also, Hearings on S. 1062 before the Senate Committee on Banking and Currency, 86th Cong., 1st Sess., 1959, p. 86. Compare this Court's treatment of the repeal of a previously enacted savings clause in *United States* v. *R.C.A.*, 358 U.S. 334, 344–345.

repugnant with the "public interest" standard under which the Comptroller grants or withholds approval. That contention is foreclosed by the decision in *California* v. *Federal Power Commission*, 369 U.S. 482, where the Court pointed to the heavy burden imposed upon those who seek to spell out antitrust exemptions by implication (369 U.S. at 485–486):

> Immunity from the antitrust laws is not lightly implied. * * * "When there are two acts upon the same subject, the rule is to give effect to both if possible." [Citing *United States* v. *Borden Co.*, 308 U.S. 188, 198.] * * * Here, as in *United States* v. *R.C.A.*, 358 U.S. 334, while "antitrust considerations" are relevant to the issue of "public interest, convenience, and necessity" (*id.*, at 351), there is no "pervasive regulatory scheme" (*ibid.*) including the antitrust laws that has been entrusted to the Commission. And see *National Broadcasting Co.* v. *United States*, 319 U.S. 190, 223. Under the Interstate Commerce Act, mergers of carriers that are approved have an antitrust immunity, as § 5(11) of that Act specifically provides that the carriers involved "shall be and they are hereby relieved from the operation of the antitrust laws * * *." See *McLean Trucking Co.* v. *United States*, 321 U.S. 67.
>
> There is no comparable provision under the Natural Gas Act. * * *

Finding no necessary conflict between the antitrust laws and the "public interest" standard under which the Commission, like the Comptroller here, was to pass on a proposed merger application, the Court

held that no antitrust exemption arises from the mere circumstance that the transaction was approved by an administrative agency under a "public interest" standard. The same result would follow in the present case even in the absence of the clear legislative history supporting that conclusion.

B. BANK MERGERS ARE SUBJECT TO THE ANTITRUST LAWS ALTHOUGH VARIOUS ASPECTS OF THE OPERATIONS OF BANKS ARE REGULATED BY STATE OR FEDERAL LAW

A number of findings proposed by the defendants and approved by the district court appear intended to attach particular significance to the fact that certain commercial banking practices are regulated by law (Fdgs. 28a–39a, R. 3492–3).[13] But neither the existence of regulation of aspects of the banking business nor the effects of regulation upon competition in the areas in which it applies can serve to limit the general applicability to banks of the antitrust laws.

1. The district court was of the opinion that the broad principles of law enunciated in antitrust cases involving commercial and industrial organizations do not apply with the same force and effect to a "regulated" industry as to one in the so-called "free enterprise" field (R. 3635). However, in dealing with industries subject to broad regulation, this Court has frequently considered the question whether the regulatory legislation conferred exemption from the antitrust laws, and in these decisions it has always

[13] Commercial banks are not permitted to pay interest on demand deposits and the maximum interest which they may pay on time and savings deposits is prescribed (Fdg. 13a, R. 3490). The banks are also subject to supervision and regulation designed to assure the safety and liquidity of their assets and investments (Fdgs. 22a–23a, R. 3491).

applied the antitrust laws with full force and effect to conduct not specifically exempted.[14]

The district court's view was, we believe, properly laid to rest in the numerous cases in which this Court held that the application of the Sherman Act to railroads is in nowise limited by reason of the fact that many aspects of the railroads' business are strictly regulated (see, *e.g.*, *United States* v. *Union Pacific R.R. Co.*, 226 U.S. 61; *United States* v. *Southern Pacific Co.*, 259 U.S. 214) and the early rate-fixing cases (*United States* v. *Freight Association*, 166 U.S. 290; *United States* v. *Joint Traffic Association*, 171 U.S. 505). For example, in *United States* v. *Southern Pacific Co.*, 259 U.S. 214, this Court held a merger of railroads within Sherman Act prohibitions notwithstanding extensive federal regulation of railroad rates and practices. The Act makes unlawful, the Court said, merger of competitive rail systems when the effect is "to suppress or materially reduce the free and normal flow of competition," and in the case before it the Court found this effect because the merger would suppress competition as to significant elements thereof which were outside the sphere of regulatory control (259 U.S. at 230–231). The Court said (*id.* at 231):

> While many practices, formerly in vogue, are eliminated by the legislation of Congress regu-

[14] *United States* v. *Borden Co.*, 308 U.S. 188; *Milk Producers Assn.* v. *United States*, 362 U.S. 458 (milk distribution case); *United States* v. *R.C.A.*, 358 U.S. 334 (television stations); *California* v. *Federal Power Comm.*, 369 U.S. 482 (distribution of natural gas). > lating interstate commerce, and through rates and transportation may be had under public supervision, there are elements of competition in the granting of special facilities, the prompt carrying and delivery of freight, the ready and agreeable adjustment and settlement of claims, and other elements which that legislation does not control.

See, also, *Georgia* v. *Pennsylvania R. Co.*, 324 U.S. 439, 456–457.

2. There is even less basis for a contention that, because of the regulation of various banking practices, competition among banks is either absent, unnecessary, or undesirable. A great portion of the business of banking, including some of its most important aspects, is not regulated and Congress in enacting the Bank Merger Act expressly recognized and declared (a) that commercial banks compete in their banking services, (b) that maintenance of this competition is of public importance, and (c) that bank mergers threaten seriously to impair maintenance of this competition.

The Senate and House Committee reports described the competition among banks as follows (S. Rep. 196, 86th Cong., 1st Sess., p. 16; H. Rep. 1416, 86th Cong., 2d Sess., p. 3):

> Competition in banking takes many forms—competition for deposits by individuals and corporations and by personal and business depositors; competition for individual, business, and governmental loans; competition for services of various sorts. * * *

Both reports declared the importance of this competition (*ibid.*):

> Vigorous competition between strong, aggressive, and sound banks is highly desirable. * * * Competition for deposits increases the amounts available for loans for the development and growth of the Nation's industry and commerce. Competition for loans gives the borrowers better terms and better service and furthers the development of industry and commerce. * * *

And, as we have noted above, both reports also declared that bank mergers have been and are a serious threat to maintenance of competition (S. Rep. 196, 86th Cong., 1st Sess., p. 8; H. Rep. 1416, 86th Cong., 2d Sess., p. 5):

> The large numbers of mergers in recent years, the vast resources involved in these mergers, and the increases in the size of the largest banks, particularly those which have grown through mergers, all give rise to concern for the maintenance of vigorous competition in the banking system. * * * The reduction in the number of banks and the loss of competition between merged banks also give rise to concern. * * *

II

COMMERCIAL BANKING IS THE MOST RELEVANT PRODUCT MARKET, AND THE PHILADELPHIA FOUR-COUNTY AREA IS THE MOST RELEVANT GEOGRAPHIC MARKET, FOR MEASURING THE TRADE-RESTRAINING AND ANTI-COMPETITIVE EFFECTS OF THE PROPOSED MERGER

Where, as here, the issue is whether the acquisition of one competitor by another violates the antitrust

laws, it is necessary to determine the "area of effective competition," that is, the trade as to which the two have been substantially competitive. This inquiry, in turn, involves ascertaining what products both sell (sometimes called the relevant product market) and what areas or regions both serve with the same or substantially the same product (sometimes called the relevant geographic market). These determinations, which enable the court to ascertain the extent and seriousness of the trade-restraining effects of the acquisition, see *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 324, are as important to a determination under Section 1 of the Sherman Act as to a decision under Section 7 of the Clayton Act. See *United States* v. *Columbia Steel Co.*, 334 U.S. 495. We shall, therefore, discuss the appropriate product and geographic markets in the present case before considering the legality of the merger under the distinct provisions of the Sherman and Clayton Acts.

The court below held that the relevant product market is commercial banking and that the relevant geographic market is an area wider than the Philadelphia four-county area (but how much wider the court was unwilling definitely to find). The government believes that the holding concerning the relevant product market is correct, and while it does not anticipate that appellees will contend otherwise, we undertake to show the validity of the holding. The holding respecting the relevant geographic market we vigorously contest.

A. COMMERCIAL BANKING IS THE MOST RELEVANT PRODUCT MARKET

A large company ordinarily sells a wide variety of goods and services, and frequently a considerable portion of these are designed to serve particular needs. If such a company combines with another by merger or otherwise, it is necessary to determine which of its products or services are truly competitive with the products and services of the company with which it is combining and which of these are competitive with the products of other remaining competitors. The words "relevant product market" are a short-cut designation of the area of effective "product" competition.

There is no difficulty in the present case in identifying the area of effective competition between the combining companies. All commercial banks, at least all those of substantial size, perform the same functions and render the same services. Since they are competitive with each other in every aspect of their business, the starting point for a determination of the relevant "product" market necessarily is the entire business in which they are engaged, in short, commercial banking.

This is not, however, the end of the process of defining a product market. From the standpoint of anti-competitive effects of the merger on the customers served or potentially served by the two banks whose independent existence the merger would bring to an end, it may be necessary to consider whether there are other institutions to which the customer might turn to obtain the substantial equivalent of

what he loses by being denied, because of the merger, an important alternative source of commercial banking service. As to this question, we submit that the record conclusively establishes that no other financial institution could fill the gap caused by the narrowing of the available suppliers of commercial banking service.

The most important elements of the service of commercial banks are supplied only by them. The district court found: that "[c]ommercial banks are the only financial institution in the United States authorized to receive demand deposits" (Fdg. 49, R. 3338); that "[o]nly commercial banks provide checking account services" (Fdg. 57, R. 3340); and that "[u]nsecured, short-term commercial loans are readily available to Philadelphia businessmen only from commercial banks" (Fdg. 72, R. 3342). The banks, accordingly, supply services ("products") which not only are not reasonably interchangeable with the services of others, but are, in fact, unique. It is therefore clear that in this case commercial banking, as such, is not only a relevant product market but it is the most relevant market for appraising the validity of the merger. Moreover, the numerous federal and State statutes applicable solely to commercial banks [15] represent implicit recognition of the separate and distinct character of their business and functions, both by Congress and State legislative bodies.

In *Brown Shoe* this Court emphasized the importance of a realistic determination of the relevant

[15] For Federal legislation, see in general 12 U.S.C. 1–548, 1811–1848.

product market. 370 U.S. at 326. On this issue the ruling below was entirely realistic and, we submit, clearly correct. The court said (R. 3651–2):

> It is the conglomeration of all the various services and functions that sets the commercial bank off from other financial institutions. Each item is an integral part of the whole, almost every one of which is dependent upon and would not exist but for the other. The Court can perceive no useful purpose here in going any further than designating commercial banking a separate and distinct line of commerce within the meaning of the statute. It is undoubtedly true that some services of a commercial bank overlap, to some degree, with those of certain other institutions. Nevertheless, the Court feels quite confident in holding that commercial banking, viewed collectively, has sufficient peculiar characteristics which negate reasonable interchangeability.

Within the "outer boundaries" of a product market, "well-defined submarkets may exist which, in themselves, constitute product markets for antitrust purposes." *Brown Shoe* at 325. In some commercial bank mergers it may be necessary to examine the merger's effect on a particular segment of the business of the merging parties, to determine whether that segment of their business is a sufficiently distinct and economically significant submarket so that, as to this submarket, the merger unreasonably restrains or monopolizes trade or otherwise has competitive effects prohibited by the antitrust laws. But such an examination need not be made where, as here, the facts establish that the merger's effect throughout the gen-

eral product market, commercial banking, violates the antitrust laws.

B. THE PHILADELPHIA FOUR-COUNTY AREA IS THE RELEVANT GEOGRAPHIC MARKET

The record in this case plainly indicates that the great majority of banking customers in the four-county area surrounding Philadelphia must obtain the banking services they need locally, in the four-county area itself. This area is therefore the relevant geographic market for assessing the effects of the PNB-Girard merger.

In *Brown Shoe*, this Court held that a horizontal merger violates Section 7 of the Clayton Act if it has effects of the kind prohibited by that section in "any" relevant geographic market (370 U.S. at 337). It is no less firmly established that the Sherman Act's prohibitions apply to restraints and monopolizations of trade which are operative in any significant geographic area. This Court has declared that the prohibitions of the Act "have both a geographical and distributive significance and apply to any part of the United States as distinguished from the whole * * *." *Indiana Farmer's Guide Co.* v. *Prairie Farmer Co.*, 293 U.S. 268, 279; *United States* v. *Yellow Cab Co.*, 332 U.S. 218, 226. In *United States* v. *Columbia Steel*, 334 U.S. 495, the Court said (p. 519) that "we have consistently held that where the relevant competitive market covers only a small area the Sherman Act may be invoked to prevent unreasonable restraints within that area", and it held (pp. 520, 527) this to be the rule for both vertical and horizontal combinations.

A geographic market, to be relevant for antitrust purposes, must correspond to the "commercial realities" of the industry and be "economically significant". *Brown Shoe, supra,* 336–337. We submit that here the Philadelphia four-county area unquestionably is, under these tests, not only a relevant geographic market, but far and away the most relevant market. It is beyond dispute that the defendants directly and substantially compete with each other in that area, that this is the primary area of their banking operations and *inter sese* competition, and that the business which they draw from this area dwarfs in size and importance that drawn from without. This is confirmed by the following considerations.

(1) All of the defendants' banking offices are located, as by law they must be, within this area.

(2) By far the greater part of the deposits they receive, the loans they make, and the trusts they administer represents business done with customers in the four-county area. For the two banks combined, customers in the four-county area represent the following percentages of the total amounts of the various categories of deposits and loans, and of the total number of trusts:

	Percentages	Record Ref.
Demand deposits of individuals	89	Fdg. 275, R. 3380
Demand deposits of partnerships and corporations	71	Fdg. 275, R. 3392
Time and savings deposits	88	Fdg. 269, R. 3385
IPC deposits (time and demand)	79	Fdg. 280, R. 3393
Loans to individuals	72	Fdgs. 260, 261, R. 3379
Commercial and industrial loans	57	Fdg. 259, R. 3377
Personal trusts (by number of accounts)	[16] 77	Fdg. 268, R. 3383

[16] This percentage is computed from figures given in the table preceding this finding (R. 3382).

The amount of business done by the two banks in the additional six counties of the 10-county Delaware Valley area suggested by defendants (Fdg. 50a, R. 3494) is minute in comparison to their business in the four-county area. The additional six counties together account for only 2 percent of the combined banks' individual demand deposits (1/44th of the total the two banks received from customers in the four-county area); 4 percent of demand deposits of partnerships and corporations (1/18th of their total from customers in the four-county area); 7 percent of loans to individuals (1/10th of their four-county total); 7 percent of commercial and industrial loans (1/8th of their four-county total); 2 percent of savings deposits (1/48th of their four-county total); and 4 percent of business time deposits (1/17th of their four-county total).[17] These figures show that the geographic area within which PNB and Girard are effective competitors for banking business can most realistically be defined as the four-county area. They also indicate that banking customers within a given area do not readily use the services of comparatively distant banks.

(3) The court below repeatedly recognized the great importance to a bank, in its competition for business, of proximity to those needing banking services. In condonative explanation of defendants' prior mergers, the court said that "mergers with existing banks in the suburbs of Philadelphia were, in many cases, the only feasible way for larger banks to follow the mi-

[17] Fdgs. 275, 260, 258, 272; R. 3389, 3392, 3379, 3376, 3388. Figures are not available for the amounts of other categories of business done in the six additional counties.

gration of many of their customers into these areas." (R. 3661; see also Fdg. 99a, R. 3502). It found that "PNB and Girard have opened new branch offices in the four-county area to serve existing customers and to participate in the growth of new communities" (Fdg. 100a, R. 3502); that the "Philadelphia banks compete to acquire desirable branch sites" (Fdg. 293, R. 3396); and that in order "to maintain its competitive position Girard believes it must keep a strategic branch system" (Fdg. 294, R. 3397). The "need to have a convenient location" in order "to serve more efficiently and conveniently the customers" each bank had in particular areas so as "to protect and retain existing business" was found to be the motivation for the establishment or purchase of a number of branch offices by both PNB and Girard (Fdgs. 296, 299, 454, R. 3397, 3398, 3441; see also Fdg. 315, R. 3400).[18] Since their offices are limited to the four counties, the foregoing considerations ensure that this is the area in which the two banks will do most of their business.

[18] Compare the similar finding of the Federal Reserve Board in another proceeding, quoted in *Transamerica Corp.* v. *Board of Governors*, 206 F. 2d 163, 167–8:

> Because of the frequency of need for access to one or more of the services of commercial banks, such banks draw their business largely from areas within which customers may conveniently visit the banks as occasion may require. Thus, in this aspect of their customer relations, commercial banks are largely local, and for the usually needed customer services a distant bank cannot adequately serve a customer. Very large concerns with national credit standing have access to credit from banks in many parts of the country and may also maintain accounts in widely scattered banks. This does not apply, however, to the great multitude of the customers of commercial banks. The

(4) Both of the banking agencies which submitted reports to the Comptroller on the merger application found the four-county area to be the relevant geographic market. The Federal Reserve Board stated that the four-county Philadelphia area is the area where "the principal competitive impact of the proposal will fall," and that bank examiners in confidential sections of their bank examination reports had expressed the view in all cases involving Philadelphia, Camden, Trenton, and Wilmington banks, that the "primary competition" of these banks is represented by the banks in the city of the particular bank's location (GX 161, R. 2824). Similarly, the report of the Federal Deposit Insurance Corporation listed as "competing" banks only banks in the four-county area, and it dealt with the competitive effects of the merger on the basis of its effects in that area (GX 163, R. 2845–2857).

In sum, it is clear that the four-county area is the relevant geographic market for banking services. Both the fact that the great bulk of the business of Girard and PNB arises from sources within the four-county area and the fact that the banks have recognized and emphasized the importance of maintaining offices near to their customers, show conclusively that banking customers need and deal primarily with

---

smaller concerns, local business enterprises, and ordinary citizens must depend upon their local commercial bank or banks for the financial services peculiar to such banks; for all these customers there is no alternative or substitute, because distantly located banks do not serve or supply their needs.

nearby banks. The few largest customers of PNB and Girard may have available to them banking sources from outside the four-county area. But the great multitude of banking customers can turn only to local banks for the services they desire and are significantly affected by an elimination of competition in the four-county area. Since the four-county area is the only market in which by far the greater part of banking customers in the area deal, it is plainly the relevant market for assessing the effects of the PNB-Girard merger.

III

THE PROPOSED MERGER VIOLATES SECTION 1 OF THE SHERMAN ACT

The illegality of the proposed merger between the second and third largest banks in the Philadelphia area can be demonstrated in either of two ways. We submit, first, that the elimination of all competition between two sound firms, the second and third largest in the most relevant market, which do 35 percent of all the business, is itself sufficient to invalidate the merger without further inquiry. This position is squarely supported by the railroad merger cases, whose authority, we submit, was not impaired by *United States* v. *Columbia Steel Co.*, 334 U.S. 495.

Second, even if the *Columbia Steel* case requires a broader framework of inquiry, the proposed merger is unlawful. For, judged upon the elements there held relevant, the proposed merger would be in unreasonable restraint of trade.

A. THE MERGER BETWEEN PNB AND GIRARD WOULD VIOLATE SECTION 1 BECAUSE IT ELIMINATES ALL COMPETITION BETWEEN TWO MAJOR FIRMS IN THE MOST RELEVANT MARKET

1. The proposal to merge PNB and Girard involves these salient facts: The merger would unite banks which respectively have deposits of $924,000,000 and $651,000,000, loans of $524,000,000 and $399,000,000 and assets in the trusts administered of $400,000,000 and $2,500,000,000.[19] The two banks actively compete with each other as to this vast volume of business, and their competition embraces every aspect of the business in which they are engaged.[20] All of this competition the merger would "completely" eliminate.[21] There was no business necessity for the merger on the part of either bank; each was in good financial condition and under sound and able management.[22] The merging companies together control approximately 36 percent of the deposits, 34 percent of the net loans, and 37 percent of the assets of all commercial banks in the four-county area (R. 3656–7). See also Statement *supra*, pp. 4–12.

The immediate effects of the elimination of competition between PNB and Girard are also shown in the record by nonstatistical evidence. That the forces of competition operate, and operate strongly in the business of commercial banking is demonstrated by the testimony of officers of the defendant banks and defense witnesses.

---

[19] Fdg. 93a, R. 3501; Fdg. 338, R. 3405.

[20] Fdgs. 292 (R. 3396), 316 (R. 3401), 337 (R. 3405), 348 (R. 3406), 355 (R. 3408), 363, 365, 368–371 (R. 3409–11).

[21] Fdg. 373, R. 3410.

[22] Fdgs. 11, 15, R. 3327, 3328.

A vice president of PNB stated that a bank's superiority in service is perhaps the most important factor in obtaining a customer of another bank as a depositor (R. 1733). An assistant vice president of PNB testified that differences between banks in their service charges on checking accounts are a factor in acquiring and retaining business (R. 813). A defense witness, a former treasurer and a long time director of a large chemical company, expressed the opinion that any company financial officer wishing to arrange a loan from a bank would like to be able to deal with two or three banks "so that he can play one against the other," and that there is "no substitute" for this ability to bargain as to terms (R. 2098, 2106). Another defense witness, an officer of a large public utility company, testified that competition between banks "produces better services," that in loans to small business banks compete with each other as to their lending service, and that in loans running into millions they compete as to the rate of interest to be charged (R. 2204).[23]

Girard, the district court found, "is an active and alert competitor of PNB throughout the area in which PNB has banking offices."[24] Each of 11 Girard offices, which together had a total of $348,138,000 in

[23] A government witness, formerly the president of a New York commercial bank, testified that in borrowing from a bank the rate of interest is always negotiated competitively unless the borrower already has a bank loan at the prime rate, and that in that situation there is "a whole variety of collateral services in which banks may compete with each other" (R. 757, 780–1, 783).

[24] Fdg. 287 (R. 3395).

IPC deposits,[25] was located within two miles of one or more of 17 PNB offices, which together had total IPC deposits of $352,608,000. By far the greater portion of this business was conducted by offices of one of the merging banks located within one mile of one or more offices of the other bank.[26] As to personal loans, a vice president of the consumer credit department of Girard testified that branches of Girard within five miles of a branch of PNB compete to make such loans,[27] and loans of individuals, partnerships, and corporations amounting to $409,613,000 are held by offices of one of the two banks located within two miles of an office of the other, again by far the greater part involving an office of one of the two banks within one mile of an office of the other.[28] Hundreds of millions of dollars in deposits and tens of millions in loans were even shown to involve customers who not only had both banks available to them but used both extensively[29] and thus could be expected readily to shift funds and loans between banks in response to competitively offered benefits.

One is not left entirely to speculation in assessing the effects of eliminating this substantial competition between PNB and Girard. The average interest rate

[25] IPC deposits are deposits (either demand or time) of individuals, partnerships and corporations as distinguished from deposits of governmental agencies and banks. "The largest part of a bank's earnings are derived from its deposits, without which it could not conduct its business" (Fdg. 27a, R. 3492).

[26] Fdg. 308 (R. 3399).

[27] Fdg. 315 (R. 3400).

[28] Fdg. 308 (R. 3399).

[29] Fdg. 290 (R. 3396).

charged by each of the two banks on the same categories of loans was markedly different.[30] For example, the interest rates charged by Girard on equipment loans were higher than those charged by PNB.[31]

> The recommendation of the equipment loans task force committee composed of officers of both defendants was that Girard's higher consumer credit interest rates be utilized by the resulting bank rather than the simple interest rate on which PNB makes equipment loans. The committee believed that competition would be such that the merged bank could obtain the higher rate [Fdg. 328, R. 3403].

The merger would, of course, also affect the rate of interest paid by the banks on time deposits. Again the effect of the complete elimination of competition between them is indicated by the trial court's findings. "On February 1, 1961, officers of the defendants compared seven existing practices of Girard with the practices of PNB in paying interest and assessing charges on savings accounts. In every instance the practice followed by Girard was more favorable to the bank than the practice of PNB. In every instance it was recommended that the Girard practice or one even more lucrative for the resulting bank be adopted. It was estimated that these practices had resulted in a saving of $138,000 in the interest Girard paid its savings depositors in 1960" (Fdg. 349, R. 3407). Since the merged bank plans to follow these practices, it is evident that a substantial reduction

[30] Fdg. 317 (R. 3401).
[31] Fdg. 327 (R. 3403).

of income to savings depositors of PNB will result from the combination of these competing banks.

2. Such a merger between two leading firms in the same market, which control a large portion of the business—here a little more than one-third—violates Section 1 of the Sherman Act. Nothing more need be proved. The merger automatically puts to an end all competition between PNB and Girard. See *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 335. Where, as here, the companies are leaders in the trade and commerce common to both, the merger by its own force eliminates substantial competition and significantly narrows the number of major units competing in the market. Moreover, the competition is suppressed, not for the uncertain duration of a consensual agreement which the parties themselves may at any time abrogate or breach, but forever. Section 1 was manifestly intended to reach restraints achieved by combining into a single enterprise, subject to common control, companies which were formerly independent. In the last quarter of the nineteenth century trusts had frequently been employed to obtain control over former independents and thereby suppress all competition among the controlled companies.[32] It is thus significant that the prohibition of Section 1 of the Act runs against "[e]very contract, combination *in*

[32] In that era, many State corporation laws did not permit a corporation to own stock of another corporation, and the trust device—vesting in trustees legal title to and voting rights in stock of the companies brought into the combination—was frequently used as the means for exercising control over two or more corporations. Use of the trust device is shown in *Standard Oil Co.* v. *United States*, 221 U.S. 1, 33–41.

the form of trust or otherwise, or conspiracy" (emphasis added) in restraint of interstate trade.

This interpretation is squarely supported by a series of decisions of this Court under Section 1 invalidating horizontal mergers between competitors when all that appeared was that two major firms in the same market had, without business necessity, combined and thereby suppressed competition between themselves. The starting point[23] is *Northern Securities Co.* v. *United States*, 193 U.S. 197. A holding company had been formed to acquire controlling stock in two railroads operating parallel lines across the northwestern tier of States. The government's sole complaint was that the merging companies had, by "repressing free competition between them," combined in illegal restraint of interstate commerce (193 U.S. at 335). The Court held that the combination

[23] Three of the Court's early horizontal merger decisions have little pertinency here. The ground of decision in *United States* v. *E. C. Knight Co.*, 156 U.S. 1, was that acquisition of the stock of nearly all the companies engaged in refining sugar constituted a monopolization of restraint of manufacture, not of interstate commerce, a view long since repudiated. While *Standard Oil Co.* v. *United States*, 221 U.S. 1, and *United States* v. *American Tobacco Co.*, 221 U.S. 106, are well known, important cases, the opinions are not very illuminating as to issues in the instant case. In the words of a prominent student of and commentator on the antitrust laws, the *Standard Oil* opinion "is more concerned with the profundities of the rule of reason than with an explicit statement of the grounds of decision," and the government's case was of such strength that it is "difficult to appraise the legal significance" of the numerous facts which the Court reviewed. Handler, *A Study of the Construction and Enforcement of the Federal Antitrust Laws*, TNEC Monograph No. 38, Senate Committee Print, 76th Cong., 3d sess., p. 51. These comments equally apply to the *American Tobacco* opinion.

constituted "a menace to, and a restraint upon, that freedom of commerce which Congress intended to recognize and protect, and which the public is entitled to have protected" (193 U.S. 327). The Court's holding was made without reference to or determination of the extent to which the traffic of the railroads brought under one control was subject to the competition of other railroads, that is, the strength of the remaining competition. In fact, only a minor part of the business for which the two roads competed was free from the competition of other carriers. Handler, op. cit. *supra*, fn. 33, at pp. 48–49.

In *United States* v. *Union Pacific R.R. Co.*, 226 U.S. 61, the Court unanimously held that acquisition by Union Pacific of a controlling stock interest in Southern Pacific violated the Sherman Act. The lines of the two railroads were widely separated, that of the Union Pacific running from Kansas City, Missouri, via Ogden, Utah, to Portland, Oregon, and that of the Southern Pacific from New Orleans via El Paso to Los Angeles and then up the coast to San Francisco and Portland (226 U.S. at p. 80). The Court recognized that the business for which the two railroads were in competition was "a comparatively small part" of their total traffic, but the Court found violation of the Sherman Act because traffic for which they did compete with each other amounted to "many millions of dollars," and because the acquisition could be expected to eliminate competition as to this traffic (226 U.S. pp. 88–89). As in the *Northern Securities* case, the combination was declared unlawful because of the elimination of the merging companies' *inter*

sese competition without reference to the strength or weakness of the remaining competition.[34]

In *United States* v. *Reading Co.*, 253 U.S. 26,[35] the Court vigorously reaffirmed the principles of the *Union Pacific* and *Northern Securities* cases. It held that the fact that the combination in issue brought

[34] The Court's decision in *United States* v. *Winslow*, 227 U.S. 202, during the same term as *Union Pacific*, was plainly not in conflict with *Union Pacific*. The issue before the Court in *Winslow* was whether a Sherman Act indictment, which alleged a merger of several companies engaged in making and selling machines for the manufacture of shoes, charged an offense under the Act. The Court, accepting the view that the indictment charged a merger of companies which "did not compete with one another" (227 U.S. at 217), held that the Act was not violated by bringing about, by merger, a vertical integration of the shoe machinery business. In *United States* v. *United Shoe Machinery Co.*, 247 U.S. 32, the same merger was attacked in a civil proceeding. The Court concluded that the evidence adequately supported the finding below that the defendant companies were "not in competition" at the time of their merger (247 U.S. at 41) and held, adhering to its reasoning in *Winslow*, that in the circumstances shown the merger of companies making complementary, not competitive, machines did not violate the Sherman Act (see 247 U.S. at 45).

[35] Two months earlier, in *United States* v. *United States Steel Corporation*, 251 U.S. 417, a four-justice majority of this Court refused to order dissolution of the Steel Corporation, which had been organized in 1901 to acquire and hold stock of twelve previously independent steel manufacturers, because it found weighty "countervailing considerations" which made it inappropriate to order dissolution (251 U.S. at 452). The nub of these countervailing considerations was that dissolution, if enforced against the merger consummated nineteen years earlier, would drastically and retroactively unsettle vast property interests and materially disturb the nation's foreign trade.

As Justice Day pointed out in dissent (*id.* at 463), the Court declined to grant relief against a "plain violation" of the Act on the ground of "public policy" considerations.

under unified control "two great competing coal companies" and "two great competing interstate carriers" was enough "to bring it, without more, within the condemnation of the Anti-Trust Act" (253 U.S. at 59). The shipments of anthracite coal falling into common hands by the combination amounted, the Court noted, to over one-third of the total for the country. See also, *United States* v. *Lehigh Valley Railroad Co.*, 254 U.S. 255.

The *Reading, Union Pacific* and *Northern Securities* decisions were reaffirmed in *United States* v. *Southern Pacific Co.*, 259 U.S. 214, where the Court held that the acquisition by the Southern Pacific of stock of the Central Pacific, which formed a connecting link for transcontinental shipments by a competitor of the Southern Pacific, violated the Sherman Act because the control could be utilized to divert transcontinental traffic to the Southern Pacific's line.

There is no reason to read the foregoing decisions as if they barred every merger between competing companies, and then to condemn them as impossibly restrictive, or to confine them to railroad mergers. Each of the cases must, of course, be read in the light of the facts concerning the merging companies which were obvious to the Court, even if not mentioned in the opinion. The merging companies, in each case, were major competitive factors in the relevant market, and they were strong companies in no danger of failure absent merger.[36] The cases therefore stand for the proposition that, where merging companies

[36] Cf. *International Shoe Co.* v. *Federal Trade Commission*, 280 U.S. 291.

are major competitive factors in a relevant market, the elimination of competition between them, by merger, itself constitutes a violation of the Sherman Act.

Applying that principle to the facts of this case, we find present all the basic elements determinative of illegality. What the defendant banks' proposed merger basically involves is acquisition by PNB of the substantial share of the market held by Girard and consequent elimination of the substantial competition of another concern which was a major factor in the market. No showing was made that this combination represents, in the words of the Court in *United States* v. *Reading Co.*, 253 U.S. 26, 57, "normal expansion to meet the demands of a business growing as a result of superior and enterprising management." Rather it was "deliberate, calculated purchase for control" of Girard's share of the market (*ibid.*).

There is, moreover, similarity in a fundamental and crucial sense between the restraints of trade held illegal in this Court's railroad merger decisions and the restraints which would result from merger of the defendant banks. Transportation and banking, each in its own way, performs a function vital to all trade and commerce, and might properly be called nerve centers for the country's trade and industry. Transportation is indispensable to trade and commerce of every variety. Similarly, commercial banks are today an indispensable source of the money and credit vital to every form of trade and industry. In the instant case the district court said: "It is the com-

mercial bank, even though strictly regulated, which comprises the backbone of the monetary system of the United States" (R. 3635). The Senate and House Committee reports on the bill which became the Bank Merger Act quoted the following from an article on banking by a well-known law professor: "Operations in deposit banking not only affect the commercial field, but also determine in great measure the supply of credit, the volume of money, the value of the dollar, and even, perhaps, the stability of the currency system."[37] In this field, as in the field of transportation, the protection of competition is the defense of all commerce, and not merely a segment, from the harms which led to the passage of the antitrust acts; the ultimate adverse effects of the concentration of banking power, through merger, are likely to extend to other industries.

3. There is nothing inconsistent with these conclusions from the earlier railroad merger cases in *United States* v. *Columbia Steel Co.*, 334 U.S. 495.[38] In that

[37] Berle, *Banking Under the Anti-Trust Laws*, 49 Col. L. Rev. 589, 592 (quoted in S. Rep. 196, 86th Cong., 1st Sess., p. 18; H. Rep. 1416, 86th Cong., 2d Sess., p. 9).

[38] *United States* v. *International Harvester Co.*, 274 U.S. 693, decided in the period between the railroad cases and *Columbia Steel*, is at times discussed in connection with the Sherman Act merger cases, but did not rule upon the question of illegal restraint of trade resulting from merger of competing companies. The defendant corporation had been formed in 1902 to acquire the assets and business of five manufacturers of harvesting machinery. A consent decree entered in 1918 in a Government proceeding seeking dissolution of the merger required the defendant to divest itself of part of its harvesting machinery business and placed certain limitations on its sales activity. The decree also entitled the United States to apply for further

case the government attacked as a violation of the Sherman Act the acquisition of the physical assets of Consolidated Steel Corporation ("Consolidated") by United States Steel Corporation ("U.S. Steel").[39] At the time of the acquisition U.S. Steel and Consolidated both made fabricated structural steeel products, the former selling these products on a nation-wide basis and the latter selling them in 11 states (referred to as the Consolidated market).[40] The government charged, among other things, that the acquisition would illegally restrain trade in that it would eliminate competition between U.S. Steel and Consolidated in the sale of these products.

Before beginning its analysis of the horizontal effects of the transaction before it, the Court noted that the standards for assessing the merger should be analogous to or at least determined in light of the standards of Section 7 of the Clayton Act even though the

---

relief at the expiration of 18 months after termination of the war if at that time the decree had not brought about a competitive situation "in harmony with law" (see 274 U.S. at 697). The government sought additional relief pursuant to this provision, and on appeal from dismissal of its petition this Court held that the consent decree precluded the government from seeking any relief by way of dissolution beyond that given by the consent decree (*id.*, at 702–703).

[39] When we refer to U.S. Steel, the reference includes the acts and business of its various subsidiaries.

[40] U.S. Steel's fabricating plants were in the East while Consolidated had one plant at Los Angeles and one at Orange, Texas (334 U.S. 501).

Both companies also made, and sold on a nation-wide scale, pipe for oil and gas pipelines, but, because the government's stronger case and thus the more important portions of the Court's opinion involved structural steel products, we shall limit our discussion to these.

particular transaction did not fall under the Clayton Act.[41] "It must be assumed," the Court said (334 U.S. at 507 n. 7), "that the public policy announced by § 7 of the Clayton Act is to be taken into consideration in determining whether acquisition of assets of Consolidated by United States Steel with the same economic results as the purchase of the stock violates the prohibitions of the Sherman Act against unreasonable restraints."

Turning to the case before it, the Court listed the factors it thought relevant, at once emphasizing the importance of the share of the business controlled by the merging parties and yet refusing to draw a sharp numerical line of illegality for all market contexts in terms of the amount of business brought under a single control (334 U.S. at 527–28):

> * * * In determining what constitutes unreasonable restraint, we do not think the dollar volume is in itself of compelling significance; we look rather to the percentage of business controlled, the strength of the remaining competition, whether the action springs from business requirements or purpose to monopolize, the probable development of the industry, consumer demands, and other characteristics of the market. We do not undertake to prescribe any set of percentage figures by which to measure the reasonableness of a corporation's enlargement of its activities by the purchase of the assets of a competitor. The relative effect of percentage command of a market varies with the setting in which that factor is placed.

[41] The Clayton Act was amended to include asset acquisitions two and one-half years after the decision in *Columbia Steel*.

The importance attached to the first of these factors was made particularly clear when the Court applied them to the proposed acquisition (334 U.S. at 529):

> * * * If we make the doubtful assumption that United States Steel could be expected in the future to sell 13% of the total of structural steel products in the Consolidated trade area and that Consolidated could be expected to sell 11%, we conclude that where we have the present unusual conditions of the western steel industry and in view of the facts of this case as developed at pages 512 to 516, of this opinion, it can not be said there would be an unreasonable restraint of trade. * * *

The "unusual conditions" and particular facts which are set out at pages 512 to 516 and which, in the Court's view, removed this combination of a 13 percent seller and an 11 percent seller from the prohibition of combinations in Section 1 were, in essence, that as a result of wartime developments, western sources of supply were developing for western steel fabricators and eastern fabricators such as U.S. Steel had lost the freight rate advantages previously enjoyed.[42] As a result, the Court said, the government's prewar statistics were "of little relevance" (p. 514). The Court also indicated (p. 513) that the government's figures negated the regional market area on which the

[42] In addition, before the war, rolled steel had been sold on the West Coast at a price computed on eastern basing points. It was contemplated that a change in the basing point for postwar prices to Geneva, Utah, would so reduce prices as to affect substantially the competitive position of eastern sources (*id.*, 502–504).

government had relied; and (p. 515) that the government had failed to establish that the two companies had actually produced similar products.[4]

Columbia Steel plainly did not hold that the elimination of *inter sese* competition between merging companies in a market which remains competitive after the merger can never in itself violate Section 1, and the opinion indeed suggests that a merger of an 11 percent seller with a 13 percent seller might, if these shares were firmly established, raise serious doubts under the Sherman Act. Faced with a narrowing of competition by combination that was both far less certain and less significant than in the railroad merger cases, the Court held only: (1) that these precedents were too "dissimilar" on their facts to determine "whether the competition which will be eliminated through the [combination] * * * is sufficient to warrant injunctive relief" (334 U.S. at 531), and (2) that in these circumstances a number of other factors bearing on the substantiality of the competition being eliminated must also be considered.

In contrast to *Columbia Steel*, here there is no question as to the substantiality of the competition being eliminated in a merger of PNB and Girard. They are the second and third largest firms in the relevant market. Between them they control 35 percent of the business, not the "doubtful" 24 percent in *Columbia*

[4] The two companies submitted bids for the same project "in a very small number of instances," and the government introduced "very little evidence" to show that "the types of structural steel products sold by Consolidated are similar to those sold by United States Steel" (*id.*, 499, 515).

Steel. Nor is there anything analogous to the "unusual conditions" of the western steel industry which undermined the significance of the "doubtful" market share percentages in that case (334 U.S. at 529).

We believe, therefore, that under the decisions of this Court, the elimination of the substantial competition which has existed between these two major banking enterprises in the four-county Philadelphia area, is itself sufficient to establish that the merger violates Section 1 of the Sherman Act. But even if the *Columbia Steel* case requires examination of other market factors, the same conclusion follows. For the examination of those factors confirms the conclusion that the merger would result in unreasonable restraint of trade.

B. THE UNLAWFULNESS OF THE MERGER BETWEEN PNB AND GIRARD IS CONFIRMED BY CONSIDERATION OF THE FACTORS DEEMED RELEVANT IN *COLUMBIA STEEL*

1. *The proposed merger would eliminate all competition between two major firms in the most relevant market.*

We have shown already that the proposed merger would combine the second and third largest banks in the four-county Philadelphia area. It would eliminate all competition between them and give a single firm 35 percent of the market. These are the salient facts in appraising the over-all effect of the combine. The other factors pertinent under *Columbia Steel* (see p. 51, *supra*) may conveniently be grouped under three heads: the trend towards concentration of banking power; the effect of the merger upon remaining com-

petition; and the presence or absence of business justification.

2. *The proposed merger would accelerate a dangerous trend towards concentration of banking power.* The Senate and House Reports on the Bank Merger Act (S. Rep. 196, 86th Cong., 1st Sess., p. 8; H. Rep. 1416, 86th Cong., 2d Sess., p. 5) both expressed "concern for the maintenance of vigorous competition in the banking system" in light of the "large numbers of mergers in recent years, the vast resources involved in these mergers, and the increases in the size of the largest banks, particularly those which have grown through mergers * * *." Competition, the reports indicated, was threatened not only by "the loss of competition between merged banks" but also by the "reduction in the number of banks" (*ibid.*).

Philadelphia has been no stranger to these processes of concentration. There were 33 commercial banks with Philadelphia headquarters in 1950, 20 in 1955, and only 14 in 1960, a 58 percent decline in this 10-year period (GX 183, R. 2878). The number of commercial banks with headquarters in the four-county area fell from 108 in 1947 to 42 in 1960, a 61 percent decline (GX 184, GX 185, R. 2879). During this 10-year period the seven largest banks in the four-county area have increased their combined share of the area's total commercial bank resources from about 61 percent to about 90 percent (R. 2850; see, also, Fdg. 388, R. 3415).

Girard and PNB played leading roles in the process of concentration even prior to the instant merger.

During the 10-year period 1950–1960 PNB acquired nine banks and 18 of its present 27 offices (Fdgs. 7–8, R. 3326). During the same period Girard engaged in six mergers acquiring 32 of its 38 offices. For the 10-year period mergers contributed 63 percent of PNB's growth in deposits and 91 percent of Girard's growth (Fdg. 432, R. 3434). The district court's findings indicate, with one possible exception, that all the banks acquired by either PNB or Girard during this period were in competition with the acquiring bank (Fdgs. 435, 436, 440–445, 457; R. 3435–3436, 3437–3438, 3442).

The merger between PNB and Girard would bring together banks having assets of over $1,000,000,000 and $740,000,000, respectively, or, in combination, more than 35 percent of the total assets of all commercial banks in the four-county area (GX 8, R. 2362). The combined bank would, as we have seen, control 34 percent of all loans and 36 percent of the deposits of all banks in the four-county area (R. 3657). Moreover, 24 of the 40 banks remaining after the merger are located outside Philadelphia (GX 184, R. 2878, 3656), and their activities are directed toward serving local residents and businesses. The merger would reduce to seven the number of commercial banks in the four-county area with legal lending limits of up to $1,000,000. It would reduce to four and three, respectively, the number of competitors for loans up to $2,500,000 and $5,000,000 (Fdg. 158a, R. 3510). The fact, therefore, is that after merger of the defendant banks there would remain a mere handful of banks capable of provid-

ing the varied banking services (some of them directly dependent upon size of resources or capital) which PNB and Girard now independently offer. An important and substantial alternative choice of banking service, and the competition arising from the availability of this choice, would be eliminated by the merger.

Finally, there is on the present record only the most remote possibility of entry of a new competitor to offset the competition eliminated by the merger of Philadelphia's second and third largest banks. In the period 1951–1961, inclusive, only one new bank started operations in the Philadelphia four-county area (while during this period many of the area's banks went out of existence), and the deposits of this bank, ten years after it opened its doors, were only 1/3 of 1 percent of the deposits held by the area's commercial banks.[44] Furthermore, no existing area bank can in the foreseeable future fill the competitive gap, or correct the competitive imbalance in the banking structure, resulting from merger of PNB and Girard.[45]

The increase in concentration resulting from the merger of these two banks alone cannot be considered in isolation from the rule it establishes. In deter-

[44] The bank referred to, Bank of Old York Road, was organized on April 1, 1951 (R. 2250) and in 1961 its deposits were only about $15,400,000 (R. 2251), whereas in October 1960 the deposits held by all commercial banks located in the four-county areas amounted to approximately $4,623,000,000 (GX 161, R. 2829). Of these total deposits, PNB has 21.3 percent, Girard 14.5 percent, and the two combined would have 35.8 percent (*ibid.*).

[45] The significance of this competitive imbalance is discussed *infra*, pp. 59–65.

mining whether merger of the defendant banks would violate the Sherman Act, this Court must take into consideration, we submit, what would be implicit in a holding sanctioning the merger. In *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 343–344, this Court noted that

> If a merger achieving 5% control were now approved, we might be required to approve future merger efforts by Brown's competitors seeking similar market shares. The oligopoly Congress sought to avoid would then be furthered * * *

If the Act permits merger of the banks presently the second and third largest in the Philadelphia four-county area, then it equally permits merger of the banks now ranking first and fourth.[46] Nor would the Act be a bar if the probable next step occurred and the remaining area banks merged (other than perhaps some very small banks providing for a limited number of customers banking service of a limited type). The claim would be that this last step was permissible because the banks other than the top two were so unequal to them in resources and service capability that, without merger, the smaller banks would be unable to survive. See *Brown Shoe*, 370 U.S. at 346.

The belief that merger would thus beget merger has solid support in experience. The history of bank

[46] The district court found that PNB utilizes and sells its stature and lending limit (a function of its size) as an instrument of competition (Fdg. 289, R. 3395–3396). Subsequent experience has shown that the impetus of such a rule would not be restricted to the area's largest banks. See the application of Liberty Real Estate Bank and Trust Co. for consent to merger, discussed *infra*, p. 65.

mergers has been one of competition in size. The district court found (Fdg. 438, R. 3437):

> PNB used the aggressive expansion programs of its nearest rivals, the Pennsylvania Company for Banking & Trusts (now the First Pennsylvania Banking & Trust Co.) and Girard, to justify in part its acquisition in 1953 of the National Bank of Conshohocken when discussing this acquisition with an official representative of the Comptroller of the Currency.

3. The proposed merger would increase the domination of the market by a few large banks.

The effects upon a market of a single firm of dominant size are subtle. It can become a price leader, although it does not have power of a monopolist to raise prices without losing substantial business. Its superiority of resources makes plain to any who would cut prices that the dominant firm can tolerate a price war for longer than its competitors. In every area of competition overwhelming size and resources on the part of a dominant firm constitute a concentration of power which, whether rationally or irrationally, overhangs a market, dampening if not stifling the enthusiasm of those who would otherwise more actively compete.

These effects have been well described in an article by Professor Bok:

> The willingness of small firms to be dominated by a large rival rests in the end upon a psychological state of mind about which economists know very little. To some extent, the smaller firms may simply wish to enjoy

> the stability or the higher profit margins that may result from following the lead of a single member of the industry. On the other hand, the willingness to defer to the leader can also be attributed in part to a recognition—real or imagined, demonstrated or assumed—that the financial strength or the lower costs of the leader will allow him to get the better of any firm which competes too rigorously, persistently cuts prices, or tries in other ways to dispute his leadership.[47]

The district court appears to have concluded that the suppression of competition resulting from merging Philadelphia's second and third largest banks would be of little consequence because there would remain 41 commercial banks in the four-county area (assuming a highly improbable termination of the long-continued merger trend in the area). We submit that this mere counting of noses leaves out of sight the point of real significance, namely, the size and capacity for competition of the remaining banks.

If the merger were carried out, the next largest bank in the area would be about 60 percent as large as the merger-created bank, each of the two next largest a little over 25 percent of its size, and the fourth largest about 15 percent (*supra*, p. 10). The remaining 37 banks would together have only 17.7 percent of the area's commercial bank deposits (GX 161, R. 2829), or an average for the 37 of 45/100 of 1 percent of the total, as against the merged banks' 35.8

[47] Bok, *Section 7 of the Clayton Act and the Merging of Law and Economics*, 74 Harv. L. Rev. 226, 275.

percent, a ratio of 1 to 80. After the merger the two largest banks in the area would together control well over 50 percent of the bank assets in the four counties.

The increase in dominance of the largest area bank caused by the merger is no less significant in assessing the validity of the merger than is the absolute dominance of the merged company.[48] The increase in dominance of the largest area bank resulting from the merger can be shown by taking the total deposits of the bank with the largest deposits as 100 and comparing them, before and after the merger, with the deposits of the nearest competitor. Using this procedure the Federal Reserve Board showed that the merger would result in the following very sharp increase in the dominance of the largest area bank, *i.e.* of the merged bank (R. 2833):

	Before Merger	*After Merger*
Bank No. 1	100	100
Bank No. 2	97	62
Bank No. 3	65	28
Bank No. 4	45	26
Bank No. 5	42	15

A bank comparable in size and strength to the proposed merger-created bank might be formed by merg-

[48] Compare Bok, op. cit. *supra*, n. 47, at p. 281:

> In view of what has just been said, the better course would be to adopt a rule based upon increases in the spread between the market shares of the first firm and its nearest competitor. Such a standard would conceivably extend not only to mergers by the largest firm but also to substantial mergers by lesser-ranked firms which lifted those firms to the top of the heap with a larger margin of superiority than the spread enjoyed by the erstwhile leader.

ing two or more of the principal remaining area banks, but this would further intensify imbalance in the banking structure—it would mean that there would be in the area two giants and an uncertain number of small banks which were not effective competitors of the giants as to many important banking functions and services.

The primary harm caused by the emergence of a single dominant firm is not necessarily to its competitors, who may even prosper under the shelter of its leadership, but to the customers of all these banks who suffer from the inevitable stifling of competition. But the dominance of PNB-Girard will also, we submit, affect the position of the other banks in the four-county area.

The defendants proposed a finding, which the district court approved, that the merger "would have no adverse effect on other Philadelphia banks" (Fdg. 145a, R. 3509). This is contrary to the plain implications of the district court's finding that PNB competes by "selling * * * the bank's stature or lending limit" (Fdg. 289, R. 3395–3396) and its findings indicating that, on at least one occasion, the aggressive expansion program of PNB's competitors, which were "threatening its claim to being the largest bank in Philadelphia," motivated an earlier merger (Fdgs. 437–438, R. 3436). The latter findings recognize the obvious fact that disparity in size between banks is a potent weapon in the competitive struggle to retain or attract business. The merger will unquestionably increase to a dramatic extent the gap between the merging banks and their smaller competitors (see

pp. 60–61, *supra*) and to that extent will jeopardize the ability of smaller banks to retain or attract business. The Federal Reserve Board also recognized that fact in its report to the Comptroller on the proposed merger. The Board said that "it seems reasonable to believe the proposal would give the resulting bank a substantial lead in the big account category and place it in a strong position to expand that lead considerably," and that the resulting bank "would obtain a dominant position, with attending competitive advantages, strongly adverse to the preservation of effective competition" (GX 161, R. 2833, 2834).

On other occasions, as well, the Federal Reserve Board, the administrative agency charged with the duty of enforcing Section 7 of the Clayton Act insofar as banks are concerned,[19] has found that the aggrandizement of one bank by merger with another is a material and serious threat to small banks operating in the same area. On April 30, 1962, the Board denied two merger applications, each seeking consent to merger of a bank in Nassau County, New York, with a large New York City bank (*The Chase Manhattan Bank Application*, 48 Fed. Res. Bull. 544; *Chemical Bank New York Trust Company Application*, 48 Fed. Res. Bull. 548). In the former ruling the Board said (*id.* 547) that "smaller banks, competing in the retail field, would almost necessarily encounter difficulty in maintaining their position against

[19] The Board instituted and pursued to the end a Section 7 proceeding involving interests of great magnitude. See *Transamerica Corp. v. Board of Governors*, 206 F. 2d 163 (C.A. 3), certiorari denied, 346 U.S. 901.

the increased competitive impact which would result from" the proposed merger. In the latter ruling the Board said (*id.* 553–554):

> The merger would eliminate a prosperous and sound alternative source of banking services, and would substitute for it a large and powerful institution which would, in competing with other such institutions, diminish the prospects of smaller banks in the County.

On May 4, 1962, the Board denied an application filed under the Bank Company Holding Act of 1956, 12 U.S.C. 1841 *et seq.*, for approval of the formation of a bank-holding company (*Morgan New York State Corporation Application*, 48 Fed. Res. Bull. 567). In this ruling the Board said (*id.* 577) that approval of the application "would necessarily tend toward" excessive imbalance in the competitive positions of the banks in the areas effected—"that is, away from the balance in which healthy competition is preserved."

In concluding that "previous mergers have not hindered the growth of the smaller banks," the district court relied in part upon the rate of growth of the four-county area's small commercial banks (R. 3659). For reasons stated below, there is no basis for reassurance in the defense exhibit undertaking to show the growth rate of banks in the four-county area.[50] The court also rested its statement on testi-

[50] The exhibit (see Fdg. 110a, R. 3504) is DX 18 (R. 3060). It charts the percentage growth of deposits, 1951–1960, of the banks having their main office in Philadelphia County, in Bucks County, in Delaware County, and in Montgomery County, compared in each case with the like percentage growth of PNB and Girard. But growth in terms of percentage

mony of representatives of four Philadelphia banks, none of them among the city's seven largest banks. We believe it is significant that the largest of the banks (Liberty Real Estate Bank and Trust Company) whose representatives testified for the defendants later filed an application for consent to its merger with another four-county area bank, and the application stated that "the smaller banks must combine so as to remain effective in their area" (Application, p. 4–A, on file with F.D.I.C.). It would thus appear that, even under the present degree of banking concentration, small banks in the four-county area do not easily survive.

4. No business factors justify the restraint of competition.

Here, as in *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 346, we believe that the merging companies have failed to make a convincing showing that the

---

has little practical significance. A bank having $2,000,000 of deposits at the end of 1949 and $5,000,000 ten years later would have an increase of 150 percent, while PNB, with some $745,000,000 in deposits in 1951 (GX 57, R. 2441) and some $986,000,000 in 1960 (GX 161, R. 2829), would have an increase of only 32 percent, but the dollar amount of the latter's increase would be over 90 times that of the small bank. In addition, banks in the three suburban counties contiguous to Philadelphia County, naturally had a greater growth rate than PNB and Girard because of the more rapid growth in population, trade and industry in these counties than in the city of Philadelphia. Cf. the statement by the Federal Reserve Board in *Morgan New York State Corporation Application*, 48 Fed. Res. Bull. 567, 578 that "smaller banks tend to be found in faster-growing areas while larger institutions tend to be found in older, more settled urban areas" and thus "the growth rates of smaller banks may sometimes compare favorably with those of larger banks * * *."

merger should be evaluated in light of any such mitigating factors "as the business' failure or the inadequate resources of one of the parties that may have prevented it from maintaining its competitive position" or "a demonstrated need for combination to enable small companies to enter into a more meaningful competition with those dominating the relevant markets." The absence of the first factor is undisputed and was found by the district court. Nor can it be argued that the merger was necessary "to enable small companies to enter into a more meaningful competition with those dominating" commercial banking in the Philadelphia area. However, the district court's opinion indicates that it felt another mitigating factor might help to justify the merger—an increase in competition in a product "submarket" offsetting any loss in competition in the main product market.

The district court indicated its belief that the "larger bank * * * will be able to compete on better terms and in a better atmosphere with the banks of other cities" in making very large loans and that this improved position of a Philadelphia bank "will benefit the city and area" (R. 3667).[51] We submit (*a*) that neither conclusion is legally relevant to the antitrust issues before this Court, and (*b*) that, in any event, neither conclusion is supported by evidence convincing enough to be given weight in a case involving a clear and pronounced threat to competition in the four-county area.

[51] The district court itself commented that it did not consider the asserted advantages to the Philadelphia community "particularly relevant" (R. 3656).

The legality of the merger is to be judged from the standpoint of the Sherman Act's objectives, not by whether the merger would bring some additional banking business to Philadelphia or induce some additional business to locate there. In terms of the Sherman Act's objectives, there is no basis for concluding that any increase in competition in the product "submarket" of very large loans can offset the harm to competition in the broader product market for commercial banking services. See *Paramount Famous Lasky Corp.* v. *United States*, 282 U.S. 30, 44.

It is true that the merger would create a bank with a legal lending limit considerably larger than that of any existing Philadelphia bank. It may also be true that this would tend to increase not only the number of competitors but also the amount of competition in the submarket for loans over $8,000,000 (which PNB can itself now lend to a single customer).[1] However, this increase in competition in the submarkets for very large loans—at the expense of a reduction in competition in the market for all other loans—results from every bank merger. To recognize such an increase in competition in a limited submarket as a justification for a reduction in competition in a much larger

[1] The legal lending limit is the maximum which a bank can lend to any single customer. In the case of a national bank this is 10 percent of the bank's total capital and surplus exclusive of undivided profits.

The lending limit of the merger-created bank would be $15,000,000 (Fdg. 193a, R. 3517), while at present the four leading Philadelphia banks have the following lending limits: PNB, $8,000,000; First Pennsylvania Banking and Trust Company, $7,704,850; Girard, $6,000,000; Provident Tradesmens Bank and Trust Company, $5,000,000 (DX 15, R. 3052).

product market, without any showing of the greater importance of competition in the newly reached field of larger loans, would be to sustain every bank merger simply because every merger results in a larger bank.

The evidence totally fails to show either that a significant increase in competition in loans over $8,000,000 would result from the merger or that a bank with a higher lending limit would substantially benefit Philadelphia by leading to the location of additional manufacturing enterprises in the Philadelphia area. The market for very large loans can be accommodated by the Philadelphia banks through a joint participation in the loan (Fdgs. 88–90, R. 3346). Defendants attempted to counter by showing, and the district court found, that there was banking business which would be attracted by the merged bank from outside the Philadelphia area—"business which might well be and perhaps probably should be handled here, and which cannot be handled under present circumstances"—resulting in benefit to the area (R. 3667; Fdgs. 198a, 205a, R. 3517, 3518). Reliance was placed by defendants upon the testimony of officers of six companies engaged in large operations conducted in part in the Philadelphia area or nearby. But their testimony pertinent to this point, which we summarize below, falls far short of supporting defendants' claim.

Atlantic Refining. It regularly maintains deposits of $2,000,000 to $3,000,000 in three New York banks, which have petroleum engineers and economists extremely helpful in any kind of oil financing and which have contacts and information of great value in con-

nection with foreign undertakings (R. 2065-6). For the foreseeable future the company would rely on the New York banks for this type of advice and help, which a Philadelphia bank could not provide "under any circumstance" (R. 2071-2, 2074). Even if all Philadelphia banks should merge, New York will continue to be the center of international finance (R. 2074).

Rohm & Haas. No Philadelphia bank can supply service related to foreign operations "remotely approaching" that supplied by banks in other cities, and it takes one or two generations to set up a foreign banking system (R. 2112–3). The company has had unusual growth, which has not been adversely affected by the maximum loan limit of Philadelphia banks (R. 2108). Its $20,000,000 line of credit with Philadelphia banks is more than sufficient to cover its borrowing needs (R. 2092, 2110).

Triangle Publications. It had in the past borrowed $10,000,000 from a Chicago bank. Its reason for having wished to borrow from one bank rather than a participation loan was that the company, which is closely held (R. 2116), did not want to divulge information concerning its business to more people than necessary (R. 2117).

Bankers Securities Corporation. A Boston bank was the lead bank in a $10,000,000 loan, with PNB, Girard and a third Philadelphia bank each having a $2,500,000 participation (R. 2127). It would continue its banking relationship with the Boston bank irrespective of a PNB–Girard merger (R. 2134–5).

Sun Oil. It has had since 1948 a line of credit with a group of banks but until 1956 made little use of this credit (R. 2141). A New York bank had originally been the lead bank but in a 1956 credit agreement PNB was made the lead bank (R. 2142–3). A subsidiary obtained a $10,000,000 loan (originally expected to be $7,000,000) from a New York bank because the desired loan was thought to be too close to PNB's loan limit (R. 2144).

Pennsylvania Power and Light. The lead banks in its bank borrowings have been New York banks, the relationship with these having started in 1920 when the Power Company was organized (R. 2167–2171). The advantage to the company of its New York bank connections is that these banks, in addition to their larger lending limits, have departments offering valuable specialized services for public utility companies (R. 2171–2).

Girard's president testified that there were five companies whose deposits or additional deposits might be obtained by a bank larger in size than Girard now is, but his testimony disclosed that, with one possible exception (Lehigh Portland Cement), this result was mere hope or surmise (R. 2222–4).[53]

The evidence not only fails to establish that the higher lending limit of the merged bank would bring new enterprises to the Philadelphia area, but the most pertinent testimony is to the contrary. Defense witness Graves, executive vice president

[53] Atlantic Refining and Sun Oil were two of the companies named, and their situation is covered by the testimony given by their officers.

of a non-profit corporation set up jointly by the City Government and Chamber of Commerce of Philadelphia, knew of no instance in which a plant had failed to locate in Philadelphia because of inadequate commercial banking facilities there, and no instance in which a plant had left the Philadelphia area because of inadequacy in its commercial banking facilities (R. 2285–6). Similarly, Girard's president knew of no business which would come to the Philadelphia area as a result of a PNB-Girard merger, and no business which had failed to come to Philadelphia because of the small size of its banks (R. 2224–2225).

This case can be summarized in a few words. The merger admittedly will unite two of the principal banking institutions in Philadelphia—already the second and third largest—into a single huge concern with total deposits of more than $1,600,000,000, total loans of more than $950,000,000 and total trusts with assets of nearly $2,900,000,000. It will completely eliminate active competition between the merging banks. It will give the merged bank a commanding position in the relevant market, with 36 percent of all deposits, 34 percent of all net loans, and 37 percent of all assets of all commercial banks in the four-county Philadelphia area. It will further increase the too-rapid trend towards concentration of banking power—an increase in which the previous mergers of each of these banks have played a significant role. Against this, the banks offer no serious business justification. They are in excellent economic condition. The only ad-

vantage they suggest is that a few big concerns *might*—it was not shown that they *would*—find it an advantage to do business with a Philadelphia bank having a higher lending limit. This narrow advantage to some hypothetical big borrower would not justify the injury to thousands of existing customers resulting from the restraint of competition which this merger would plainly cause.

IV

THE PROPOSED MERGER VIOLATES SECTION 7 OF THE CLAYTON ACT

If the Court agrees with our analysis in Point III that the merger violates Section 1 of the Sherman Act, there is no occasion to consider whether it violates Section 7 of the Clayton Act. The complaint in this case, however, also alleged violation of the latter section, and we now show briefly that the merger contravenes its provisions.

We recognize that when the bill which became the Bank Merger Act of 1960 was under consideration in Congress, both the Department of Justice and the Banking and Currency Committees of the House and Senate were of the opinion that bank mergers were asset acquisitions and not within Section 7 of the Clayton Act.[54] However, these views, on a matter not directly involved in the Bank Merger Act, are not decisive. See *United States* v. *duPont & Co.*, 353 U.S. 586, 590. The decisive considerations, we believe, demonstrate that Section 7 does cover bank mergers.

[54] See Girard Motion to Affirm, 10–12.

A. SECTION 7 IS APPLICABLE TO THE MERGER

The question whether Section 7 applies at all to this merger arises out of the following circumstances:

Prior to 1950, Section 7 covered only stock acquisitions. Its failure also to reach asset acquisitions made it manifestly inadequate to deal effectively with many corporate combinations which posed a serious anticompetitive threat.[55] It was this gap in the statutory scheme, which prohibited anticompetitive corporate combinations accomplished by stock acquisitions, but permitted identical combinations when achieved by asset acquisitions, or it seemed,[56] statutory merger,

[55] See *Brown Shoe, supra*, 370 U.S. at 312–316; Handler and Robinson, *A Decade of Administration of the Celler-Kefauver Antimerger Act*, 61 Col. L. Rev. 629, 652–653.

[56] *In Arrow-Hart & Hegeman Elec. Co.* v. *Federal Trade Commission*, 291 U.S. 587, 595, the Court said that Section 7 does not forbid "the merger of corporations pursuant to state laws," but we believe this statement is limited by its context. The critical facts in that case were: The controlling stockholders of two companies, desiring to bring them under common control, formed a holding company, which exchanged its stock for all the common stock of the two manufacturing companies. After the Commission had issued a Section 7 complaint against the holding company, steps were taken to escape the Commission's jurisdiction. Two new holding companies were formed, each acquired all the common stock of one of the manufacturing companies in exchange for its own stock, and each issued its stock directly to the stockholders of the original holding company. This company thereupon dissolved and the two new holding companies and their respective manufacturing subsidiaries merged into one corporation. The Commission, after issuing a supplemental complaint against the corporation thus created, ordered it to divest itself of the stock of one of the manufacturing companies and to include in the divestment the company's manufacturing properties and facilities.

The Commission contended that, in issuing an order requiring stock divestment, it might validly disregard steps taken to de-

which led to the Celler-Kefauver Anti-Merger Act of 1950. The basic purpose of the 1950 statute was to plug this loophole and to "make clear" that the substantive provisions of Section 7 applied to "all types of mergers and acquisitions, vertical and conglomerate as well as horizontal" (H. Rep. 1191, 81st Cong., 1st Sess., p. 11).

The 1950 statute extended the prohibitions of Section 7 to cover asset acquisitions by any corporation subject to the jurisdiction of the Federal Trade Commission. There is no indication in the legislative history why the prohibition on asset acquisitions was limited to such corporations, and was not made coextensive with the broader ban on stock acquisitions.

Banks are not subject to the jurisdiction of the Federal Trade Commission, and it is thus clear that an asset acquisition by a bank would not be covered by Section 7. But a statutory merger or consolidation, such as is here involved, is neither a pure asset nor a pure stock acquisition. It is, rather, a hybrid form of corporate combination which partakes of and has the characteristics of both.

1. Since the anticompetitive effect of a statutory merger or consolidation is just as great as that of a

---

feat the Commission's jurisdiction. But this Court said that each of the manufacturing companies had preferred stock which was outstanding in the hands of the public prior to the merger, that the merger required consent by the preferred stockholders, and that the Commission was therefore not entitled to act upon the basis that the existing, merger-created corporation was a mere creature or *alter ego* of the offending original holding company. See 291 U.S. at 597–598. The Court further held that the Commission, unlike a court of equity, did not have the power to grant relief beyond that specifically authorized by statute (pp. 598–599).

stock acquisition, effectuation of the policies of the 1950 Act requires that this form of corporate consolidation should not be treated as an asset acquisition—and hence not covered by Section 7 if made by a corporation not subject to the jurisdiction of the Federal Trade Commission—unless it plainly and unequivocally is one. The question, therefore, is whether—in light of the legislative intent in the 1950 Act to erect "a barrier to what Congress saw was the rising tide of economic concentration" and "to create an effective tool for preventing all mergers having demonstrable anticompetitive effects" (*Brown Shoe, supra,* 370 U.S. at 317, 319)—statutory mergers of corporations not subject to the jurisdiction of the Federal Trade Commission shall be deemed outside the prohibitions of Section 7. The legislative history shows that Congress intended the prohibitions of Section 7 to cover "all types of mergers and acquisitions" that had the proscribed anticompetitive effect; this history nowhere suggests that Congress intended an exception for such an important area of the economy as bank combinations, which are traditionally accomplished through statutory mergers and consolidations rather than through acquisitions of assets or stock. Moreover, statutory mergers, far from being plainly and unequivocally asset acquisitions, are very different from the ordinary purchase of assets.

A merger necessarily involves the complete disappearance of one of the merging corporations. A sale of assets, on the other hand, may involve no more than a substitution of cash for some part of the selling company's properties, with no change in corporate structure and no change in stockholder

interests. Shareholders of merging corporations surrender their interests in those corporations in exchange for their very different rights in the resulting corporation. In an asset acquisition, however, the shareholders of the selling corporation obtain no interest in the purchasing corporation and retain no interest in the assets transferred. In a merger, unlike an asset acquisition, the resulting firm automatically acquires all the rights, powers, franchises, liabilities, and fiduciary rights and obligations of the merging firms. In a merger, but not in an asset acquisition, there is the likelihood of a continuity of management and other personnel. Finally, a merger, like a stock acquisition, necessarily involves the acquisition by one corporation of an immediate voice in the management of the business of another corporation; no voice in the decisions of another corporation is acquired by purchase of some part of its assets. Plainly, a statutory merger is quite unlike the typical acquisition of assets, such as was involved in *Columbia Steel,* the case which provided the impetus for the 1950 Act.

Among the many differences mentioned above is one distinction which is of central importance to the purposes of Section 7. Mergers, like stock acquisitions, necessarily involve the acquisition by the corporation of an immediate voice in the management of another business. Indeed, it was this expansion of power over corporate decisions affecting competition which must have appeared the primary threat to competition when the first Section 7 was passed in 1914. In contrast, no voice in the decisions of a different business is necessarily acquired when a cor-

poration purchases some part of the assets of that business.

From the standpoint of the evils Section 7 was designed to prevent—threat of substantial lessening of competition or tendency to monopoly resulting from bringing the economic power of independent corporations under single control—agreement between two corporations and their respective stockholders to effectuate a merger and the direct acquisition of stock of another corporation are both essentially different from—and inherently more dangerous than—the ordinary purchase of some part of the assets of another corporation, as to which purchase the scope of the 1950 Act is limited to corporations subject to the jurisdiction of the Federal Trade Commission. In this respect a merger, even more than a stock acquisition, stands in sharp contrast to the ordinary purchase of assets. It is this contrast which, we submit, best explains the statute's otherwise-wholly-irrational distinction between asset acquisitions, as to which its scope is limited, and all other prohibited combinations.

2. In its essential elements, the PNB-Girard merger more closely resembles a stock acquisition than an asset acquisition.

The merger agreement provided that Girard be consolidated with PNB pursuant to Section 20 of the national banking laws, 12 U.S.C. (Supp. II) 215, under the charter of PNB, that all of PNB's stock remain outstanding as shares of the merged bank, that each share of Girard be converted into 1.2875 shares of the merged bank, that the merged bank be subject to all the liabilities of PNB and Girard, and that all of their property and property rights be vested in it

(GX 117, R. 2717; GX 119, R. 2718–20). This agreement provided, in substance, for an exchange of Girard stock for PNB stock.

The essence of the transaction was that the outstanding stock of two banks, presently under separate and different ownership, would be brought under common ownership by exchange of Girard stock for stock of a bank operating under the name and charter of PNB and possessed of PNB's assets and business (plus those of Girard). The carrying out of this transaction would have exactly the same effect as an exchange of all of Girard's stock for PNB stock, followed by dissolution of Girard (then a 100 percent subsidiary of PNB). The basic objective of the transaction was the joining together of two going corporate organizations and a commingling of the interests of their shareholders. Certainly from the standpoint of the stockholders of the two banks the heart of the transaction was the agreed basis for exchange of stock—1.2875 shares of PNB for each share of Girard.

In completing the analogy to an acquisition of stock in Girard by PNB, one final point deserves mention. In the case of bank mergers, as with most statutory mergers, the surviving corporation would be obligated by statute to pay to any shareholder of the acquired corporation who dissented from the plan of merger the value of the shares he held at the date of merger. The surviving bank is, in short, required by statute to purchase at least some of the shares of stock of the acquired corporation, assuming that less than all of the latter's shareholders agreed to the merger. 12 U.S.C. (Supp. II) 215(b); 12 U.S.C. (Supp. II) 215a(b).

Recognition of these similarities of a statutory merger to a stock acquisition—as well as an awareness of the differences from an asset acquisition (see *supra*, pp. 75–77)—may have led this Court in *Brown Shoe Co. v. United States*, 370 U.S. 294, to treat the Brown-Kinney merger as a stock, not an asset, acquisition, although the merger was effectuated pursuant to statutory provisions similar, in all material respects, to those involved here.[57] At the outset of its opinion it said that the action brought by the United States alleged that "a contemplated merger" between Kinney and Brown, "through an exchange of Kinney for Brown stock," would violate Section 7 of the Clayton Act. 370 U.S. at 296. The Court then said (*ibid.*):

> The Act, as amended, provides in pertinent part:
>
> "No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital * * * of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly."

In the Court's view it was apparently the stock acquisition prohibition of Section 7 which was controlling, and the asset acquisition prohibition, represented by asterisks in the Court's quotation of the section, was not considered pertinent.

---

[57] Compare §§ 86, 89 of the New York Stock Corporation Law with 12 U.S.C. (Supp. II) 215.

The question of whether the Brown-Kinney merger was a stock or asset acquisition was not raised or argued in *Brown Shoe*, *supra*.

B. THE PROPOSED MERGER VIOLATES SECTION 7

At the 1961 term this Court fully and carefully considered the circumstances under which a horizontal merger violates Section 7 of the Clayton Act.

The Court, in *Brown Shoe Co.* v. *United States*, 370 U.S. 294, first recognized that the "dominant theme pervading congressional consideration of the 1950 amendments was a fear of what was considered to be a rising tide of economic concentration in the American economy" and that a "keystone in the erection of a barrier" to this tide was "provision of authority for arresting mergers at a time when the trend to a lessening of competition in a line of commerce was still in its incipiency" (370 U.S. 315, 317). In establishing standards of illegality to effectuate these purposes of Congress, the Court held that, while "the market share which companies may control by merging is one of the most important factors to be considered" (370 U.S. 343) and is a factor to be considered in light of the effects of approving all industry mergers of this size and not merely the effects of the one before the Court (370 U.S. 343–344), Congress indicated plainly that a "merger had to be functionally viewed, in the context of its particular industry" (370 U.S. 321–322).

Congress, the Court noted, had indicated that the courts should consider, among others, such factors as whether "a whole or material part of the competitive activity of an enterprise, which had been a substantial factor in competition, had been eliminated" and whether "the relative size of the acquiring corporation had increased to such a point that its advantage

over competitors threatened to be 'decisive'" (370 U.S. 321, n. 36). To these considerations the Court added: the degree of concentration of the industry in which the merger was to take place, the trend of the industry towards concentration and dominance by a few firms, the ease of entry of new firms, and the presence of such mitigating factors as the business failure of one of the parties or the need of two small firms to merge if they are to become meaningful competitors in the market (370 U.S. 322, 345–346).

In our discussion of the validity of the PNB-Girard merger under Section 1 of the Sherman Act we have developed in detail the relevant facts bearing upon the factors discussed in *Brown Shoe*. We therefore believe it sufficient to indicate in summary fashion that in terms of these factors, there is here far greater danger and probability of a substantial lessening of competition than in *Brown Shoe*. Here, the share of the relevant market which the merger would bring under the control of the merging parties, 36 percent,[58] would incontestably be far greater than in *Brown Shoe*, and this increase in concentration would occur in an industry in which there is every reason to believe that approval of this merger would require the court "to approve future merger efforts * * * by * * * competitors seeking similar market shares" (370 U.S. 344).[59] The whole of the competitive activity of an enterprise, which had been a substantial factor in competition, would be eliminated.[60] These changes would take place in an indus-

[58] See *supra*, p. 39.

[59] See *supra*, pp. 58–59.

[60] See *supra*, pp. 39–43.

try which has, in the last decade, been characterized by an alarming rush towards concentration [61] and by surprisingly few new entries to replace the disappearing competitors.[62] The result of the merger would be to create in the relevant market a dominant giant which would dwarf the comparative position of the Brown-Kinney combine.[63] There are, as in *Brown Shoe*, no substantial mitigating factors.[64]

In sum, we submit that under the tests of illegality applied in *Brown Shoe* and under the holding in that case, the merger of PNB and Girard very plainly violates Section 7 of the Clayton Act.

CONCLUSION

The judgment of the district court should be reversed, and the cause should be remanded to that court to enter judgment enjoining the proposed merger.

Respectfully submitted.

APPENDIX

Section 18(c) of the Federal Deposit Insurance Act, as amended by the Bank Merger Act of May 13, 1960, 74 Stat. 129, 12 U.S.C. (Supp. II) 1828(c), provides in pertinent part:

> * * * No insured bank shall merge or consolidate with any other insured bank or, either directly or indirectly, acquire the assets of, or assume liability to pay any deposits made in, any other insured bank without the prior written consent (i) of the Comptroller of the Currency if the acquiring, assuming, or resulting bank is to be a national bank or a District bank, or (ii) of the Board of Governors of the Federal Reserve System if the acquiring, assuming, or resulting bank is to be a State member bank (except a District bank), or (iii) of the Corporation if the acquiring, assuming, or resulting bank is to be a nonmember insured bank (except a District bank). * * * In granting or withholding consent under this subsection, the Comptroller, the Board, or the Corporation, as the case may be, shall consider the financial history and condition of each of the banks involved, the adequacy of its capital structure, its future earnings prospects, the general character of its management, the convenience and needs of the community to be served, and whether or not its corporate powers are consistent with the purposes of this chapter. In the case of a merger, consolidation, acquisition of assets, or assumption of liabilities, the appropriate agency shall also take into consideration the effect of the transaction on competition (including any tendency toward monop-

oly), and shall not approve the transaction unless, after considering all of such factors, it finds the transaction to be in the public interest. In the interests of uniform standards, before acting on a merger, consolidation, acquisition of assets, or assumption of liabilities under this subsection, the agency * * * shall request a report on the competitive factors involved from the Attorney General and the other two banking agencies referred to in this subsection * * *. The Comptroller, the Board, and the Corporation shall each include in its annual report to the Congress a description of each merger, consolidation, acquisition of assets, or assumption of liabilities approved by it during the period covered by the report, along with the following information: * * * a statement by the Comptroller, the Board, or the Corporation, as the case may be, of the basis for its approval. * * *

QUESTIONS PRESENTED	1
STATUTES INVOLVED	2
STATEMENT OF THE CASE	2
Introduction	2
Commercial Banking and Competition	4
Structure of Philadelphia Banking	9
Concentration in Commercial Banking	15
Reasons for the Merger	20
SUMMARY OF ARGUMENT	23
ARGUMENT	27
I. Section 7 of the Clayton Act is not applicable because the proposed merger will not involve an acquisition of stock	27
II. The evidence affirmatively shows that the proposed merger will not result in an unreasonable restraint of trade within the ban of section 1 of the Sherman Act	39
A. Competition in commercial banking is fundamentally different from competition among industrial and commercial businesses	40
B. The "market shares" which are the principal basis of appellant's case are so distorted as to be meaningless	44

PAGE

1. The four-county area proposed as the relevant market by appellant does not correspond to the economic or commercial realities of commercial banking in the Philadelphia area... 47

2. Appellant's statistics do not separate the business of local banks done outside the four-county area from that done within it..... 52

3. Appellant ignores all of the competition in the four-county area furnished by competitors located elsewhere 53

C. The evidence establishes that the merger will not have an adverse effect on banking competition or on competitors or customers of appellees in the Philadelphia area 55

1. The elimination of competition between appellees does not of itself constitute an unreasonable restraint of trade 56

2. The merged bank will not be able to dominate or have a competitive advantage over Philadelphia area banks 60

3. Appellant's contention that banking concentration in Philadelphia will be undue and dangerous is refuted by the evidence 64

PAGE

D. The merged bank will be better able to serve the convenience and needs of the Philadelphia community and will increase regional and national competition 70

CONCLUSION 78

APPENDIX 81

I. Statutes 81

II. Selected excerpts from the legislative history of The Bank Merger Act of 1960 supporting the view that the dominant intent of Congress was that any review of bank mergers should take cognizance of all the special factors which pertain to banking, money and credit 84

IN THE

Supreme Court of the United States

OCTOBER TERM, 1962

No. 83

United States of America,

Appellant

v.

The Philadelphia National Bank and Girard Trust Corn Exchange Bank

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA

BRIEF FOR APPELLEES

QUESTIONS PRESENTED

1. Whether the proposed merger of appellees, pursuant to the national banking laws and the approval of the Comptroller of the Currency acting under the Bank Merger Act of 1960, is subject to section 7 of the Clayton Act.

2. Whether it was clearly erroneous for the district court to find that the record established that the merger of appellees would not constitute an unrea-

sonable restraint of trade under section 1 of the Sherman Act.

STATUTES INVOLVED

Section 1 of the Sherman Act, 26 Stat. 209, as amended, 15 U.S.C. § 1, and section 7 of the Clayton Act, 38 Stat. 731, as amended, 15 U.S.C. § 18, are printed at pages 2-3 of appellant's brief. The Bank Merger Act of 1960, 74 Stat. 129, 12 U.S.C. § 1828(c) (Supp. II), and section 215(e) of the National Banking Laws, 73 Stat. 462, 12 U.S.C. § 215(e) (Supp. II), are set forth in the appendix to this brief at pages 81 and 82.

STATEMENT OF THE CASE

INTRODUCTION

The Philadelphia National Bank ("PNB"), a national bank, and Girard Trust Corn Exchange Bank ("Girard"), a Pennsylvania state bank, adopted a plan of merger on November 15, 1960 and filed an application for approval of the merger (GX 57, R. 2423)* with the Comptroller of the Currency as required by the Bank Merger Act and section 215 of the national banking laws. In accordance with the provisions of the Bank Merger Act the Comptroller received advisory reports "on the competitive factors involved" from the Board of Governors of the Federal

* Appellees have followed the method of designating exhibits and findings of fact set forth at page 4, footnote 2 of appellant's brief.

Reserve System (GX 161, R. 2822), the Attorney General (GX 162, R. 2834) and the Federal Deposit Insurance Corporation (GX 163, R. 2845). After consideration of the competitive factors and the banking factors specified in the Act, the Comptroller found that the merger would be in the public interest (GX 164, R. 2857) and gave his approval of it on February 24, 1961 (DX 14, R. 3049). The following day the complaint in this action was filed by the Attorney General to enjoin the merger as an alleged violation of section 7 of the Clayton Act and section 1 of the Sherman Act.

The trial began on June 5, 1961 and ended on August 3, 1961. Appellant offered 255 exhibits and called 21 witnesses. Appellees offered 70 exhibits and called 29 witnesses. After hearing oral argument the district court filed, on January 15, 1962, an opinion accompanied by findings of fact and conclusions of law (R. 3629) and an order dismissing the complaint (R. 3669). Appellant took an appeal to this Court and probable jurisdiction was noted on May 21, 1962, 369 U.S. 883 (1962).

The district court's conclusion that the proposed merger would not violate section 7 of the Clayton Act or section 1 of the Sherman Act was based on evidence which disclosed the nature of commercial banking, the complexity of banking markets, the peculiar nature of the regulated competition among commercial banks, and particularly the structure of commercial banking in the Philadelphia area. In reaching this conclusion the district court found that "commercial banking is wholly different from industrial or commercial busi-

nesses" (Fdg. 9a, R. 3490), and rejected the argument of appellant that statistics and size comparisons, which might be some evidence of power to control the market in industry or commerce, have a similar significance in commercial banking. Whatever appellant's figures might mean if they really represented market shares, and if this case dealt with steel companies, shoe companies, or railroads, the district court found that they do not establish, or even imply, a substantial lessening of competition, or a tendency to create a monopoly, or an unreasonable restraint in the field of commercial banking in the Philadelphia area.

This Statement will be devoted to the facts that led the district court to reject appellant's argument, which it said was not supported by "a single shred of evidence" (R. 3666).*

COMMERCIAL BANKING AND COMPETITION

Commercial banks are the only institutions which are permitted by law to receive demand deposits (R. 3646), and by far the largest part of a commercial bank's resources is derived from such deposits. For example, approximately 72% of the merged bank's resources will be demand deposits which the depositors can withdraw immediately, and approximately 15% will be time and savings deposits which the depositors can withdraw upon short notice (GX 57, R. 2449). Consequently a total of 87% of the merged bank's assets will be subject to the dictates of its customers.

* A summary of the evidence may be found at pages 4 and 22-31 of Girard's motion to affirm.

Unlike an industrial or commercial enterprise which owns or controls its assets, a commercial bank "owes" the great bulk of its resources and owes them to the very persons whose patronage it seeks to retain.

The funds so obtained by commercial banks plus their relatively small invested capital, less the reserves required by law and sound banking practice, are lent to customers in a variety of ways, such as by short-term secured and unsecured loans, mortgage loans, and installment loans on automobiles and other consumer goods (GX 57, R. 2451). In addition, some commercial banks, including appellees, provide trust services and many other services such as investment advice, credit information, and payroll accounting (DX 38, R. 3176). However, the bulk of a commercial bank's business generally consists of short-term loans because long-term loans would inhibit immediate repayment of the demand deposits from which the largest portion of the loans has been made (R. 3647).

Customers with high borrowing requirements regularly maintain substantial demand deposits which on the average far exceed their loans (Fdg. 197a, R. 3517). For example, the average demand deposits of PNB's largest borrowing customers are twice as great as their average loans (DX 26, R. 3163) and Girard's are more than one and a half times as great (DX 40, R. 3181). This excess of deposits, less reserves, is available for lending to other customers (R. 937).

A commercial bank is, in general, not permitted to have outstanding loans to any one customer in excess of 10% of the bank's capital and surplus (R.

3647). This lending limit is of no consequence to the average borrower, but it is a matter of concern to larger borrowers who generally seek out a bank which has a limit safely beyond the borrower's anticipated requirements (Fdg. 179a, R. 3513-3514). While loans which exceed a single bank's limit can be participated in by other banks, borrowers prefer not to deal with a number of participating banks because of the administrative burden, the added cost of maintaining deposit balances with a number of banks, the confidential nature of banking relationships and the time consumed in developing them (Fdg. 186a, R. 3515, 3667). For that reason and because of the possible loss of customers and deposits, large banks seldom participate loans to other large banks (*Ibid.*).*

Commercial banks are subject to extensive regulation by law and by the Federal Reserve Board, the Comptroller of the Currency, the Federal Deposit Insurance Corporation and state banking authorities (Fdg. 10a, R. 3490). The principal purpose of this regulation is to protect the banks' depositors and the economy from what have been the disastrous effects of unrestricted competition in the past (Fdg. 11a, R. 3490; R. 1370-1371).

Banks must obtain approval from public authorities not only in order to enter the business but also for the establishment and location of the offices where they will conduct it (Fdg. 19a, R. 3491).

* Small banks participate loans to large banks where they already maintain substantial deposits as compensation for such participations and other correspondent services (Fdg. 186(d)a, R. 3515).

Commercial banks are not permitted to pay interest on demand deposits and the maximum interest which they may pay on time and savings deposits is fixed by regulation (Fdg. 13a, R. 3490).

The maximum interest rates which may be charged on loans are fixed by state usury laws and, while in many states these laws do not apply to loans to corporations, in practice they become a ceiling for most such loans (R. 1463-1464). Minimum interest rates are directly affected by a variety of forces operating in the money market. These include the open market practices of the Federal Reserve Board in buying and selling government securities, which affect the supply of lendable funds; the reserve requirements of the Federal Reserve Board and the state banking authorities, which also affect the supply of lendable funds; and the rediscount rate fixed by the Federal Reserve Banks for loans they make to member banks. All of these forces significantly influence the supply of and demand for money and thus directly affect the "prime rate" charged by the nation's largest banks to their customers with the highest credit standing (Fdg. 17a, R. 3491).* The prime rate in turn sets a practical minimum for interest rates throughout the country. Between these maximum and minimum rates the interest charged by a bank to a particular customer depends primarily upon that customer's credit standing. Since credit evaluations by different banks are generally similar (Fdgs. 30a-31a,

* The merged bank would not be large enough to have any influence in setting the prime rate (Fdg. 18a, R. 3491).

R. 3492; R. 940, 1243) there is little price competition in the setting of interest rates (R. 1364, 1366-1369).

In addition there are simple business reasons why there is no significant interest rate competition among commercial banks. If a bank were to reduce its rates it would soon exhaust its available funds, and if it were to increase them it would quickly lose borrowers to other banks (Fdgs. 32a-33a, R. 3492).

Commercial banks must be concerned not only with competition from other commercial banks but also with competition from other financial institutions and alternative investments. Exhibit D 41 (R. 3182-3184) shows such competition for each banking function. For example, when interest rates are favorable large corporate depositors invest working capital, that might otherwise be on deposit, in short term government obligations, commercial paper, bankers' acceptances and repurchase agreements (R. 1381, 1719-1721). Again, the amount of savings deposits held by commercial banks is far less than the amount held by mutual savings banks, savings and loan associations and credit unions which are permitted to pay higher rates (DX 32, R. 3168; DX 34, R. 3171; DX 61, R. 3283; R. 1388-1391). In their lending functions commercial banks must meet competition not only from those institutions but also from small loan companies, consumer discount companies, commercial finance companies, insurance companies, pension trusts and factors (R. 1393-1401, 1729-1730).

The nature of commercial banking makes possible successful competition between small banks and large.

On the strength of the testimony of experienced banking witnesses, the district court found that the principal factors in competition among commercial banks are convenience, quality of service, personal relationships, and the capacity to meet the requirements of customers (Fdg. 37a, R. 3493). In this connection the district court made these two significant findings:

> "Large commercial banks do not have a competitive advantage for business within the range of the resources of smaller banks. In that range, small banks are able to compete as effectively as large banks." (Fdg. 40a, R. 3493).
>
> "The growth of a small bank is not adversely affected by the existence of a large competing bank; in most cases small banks grow faster than large banks, which find it difficult to maintain their positions relative to small banks." (Fdg. 41a, R. 3493).

Stated another way, this equality of competitive opportunity in commercial banking prevents large size from conferring "dominance", the power to control either customers or other banks. Each bank available to a potential or existing customer has the same chance to attract or hold that customer so long as his requirements are within the range of the bank's resources.

STRUCTURE OF PHILADELPHIA BANKING

Commercial banks sell their services in local, regional, national and international markets, which

overlap and are difficult to define (Fdg. 45a, R. 3494). Appellees do business in all of these markets, but appellant has chosen as the relevant geographic market a local area determined by political boundaries alone. Appellant has defined this market as Philadelphia County and the three adjacent Pennsylvania counties, Bucks, Montgomery and Delaware. The map on the following page shows those counties as well as the others referred to in the record, which are a part of the Third Federal Reserve District.

Philadelphia is the industrial, commercial and financial hub of a metropolitan area consisting of those four counties and Chester County in Pennsylvania, as well as Camden, Burlington and Gloucester Counties in New Jersey (R. 2276, 2290). This is the standard census area (R. 2274). The district court concluded that at the very least the relevant geographic market consists of this eight-county area, or the slightly larger ten-county area which includes also Mercer and New Castle counties, "and definitely New York City" (R. 3653).

Even the most modest customers are free to do business across political boundaries and do so (Fdg. 49a, R. 3494). Banks in New York, Chicago, San Francisco and many other large cities actively solicit and obtain accounts in the Philadelphia area* and conversely appellees solicit and obtain business from

* Fdg. 52a, R. 3495-3496; R. 1237-1238, 1611-1612, 1614-1616, 1620-1623, 1625-1628, 1663, 1702-1704, 1714, 1797, 1825-1826, 1898-1899, 1941, 2025-2028, 2065-2070, 2098-2100, 2103-2104, 2112, 2117-2123, 2126-2133, 2142-2145, 2148, 2152-2155, 2167-2175, 2180-2181.

distant places (Fdgs. 50a-51a, R. 3494-3495). The far reaching nature of appellees' banking business is reflected by the fact that 44% in dollar amount of their loans are made to borrowers located outside the four-county area (DX 30, R. 3167). Actually appellees derive a greater amount of their commercial and industrial loans from the northeastern United States outside the Third Federal Reserve District than they do from Bucks, Delaware and Montgomery Counties (DX 63, R. 3285).

The district court concluded that a relevant market area must be determined not only from the point of view of the bank but also from the point of view of the customer, and that the customer's geographic market for banking services is determined by the location of the alternative sources from which he can obtain those services (Fdgs. 46a-49a, R. 3494). Customers of appellees representing at least 68% in dollar volume of their commercial and industrial loans, and at least 64% in dollar volume of their business demand deposits have banking choices which include commercial banks located outside the four-county area (Fdg. 52(e)a, R. 3496; DX 43, R. 3185). Upon the basis of such evidence the district court concluded that the relevant market area is probably "the greater part of the northeastern United States" (R. 3653).

Despite the fact that the district court refused to accept the four-county area as the relevant market, it nonetheless tested the competitive effects of the proposed merger in that limited area (R. 3654). It

noted that borrowers would have available the following alternatives within that area after the merger* (Fdg. 158a, R. 3510, 3660):

Size of Loan	Number of Commercial Banks in the 4-County Area After the Merger Able to Accommodate Such Customers
Under $10,000	41
$ 10,000–$ 24,999	39
25,000– 49,999	35
50,000– 99,999	27
100,000– 249,999	18
250,000– 499,999	10
500,000– 999,999	7
1,000,000– 2,499,999	4
2,500,000– 4,999,999	3
5,000,000– 7,999,999	2
8,000,000–15,000,000	1

The district court found that these banks "today are strong and vigorous competitors in offering commercial banking services to the public" (Fdg. 123a, R. 3505). It also found that banks from other cities are active competitors in this area, particularly for the larger loans. Many of these competitors are located in New York City where, for example, there are 17 banks with lending limits higher than $1,000,000 (DX 39, R. 3179). The district court ob-

* PNB has a lending limit of $8,000,000 and Girard's limit is $6,000,000. The merger agreement provides for an increase of the capital stock and surplus of the proposed new bank at merger from the combined total of $140,000,000 to $150,000,000, principally by a transfer from undivided profits (GX 57, R. 2452). The merged bank will therefore have a lending limit of $15,000,000.

served that "the main bone of contention here is that the merger will have its most serious effects on small and medium size borrowers. The above figures, however, indicate to the Court that there are more than an adequate number of sources for these types of borrowers. In fact, it has been established that a borrower turned down by three banks would be unable, with few exceptions, to obtain a loan at another commercial bank. And, of course, those borrowers in need of larger loans are not limited to the few banks in Philadelphia capable of making such a loan" (R. 3660).

The statistics relied on by appellant to show a restraint of trade in the four-county area include only the amount of loans, deposits and other types of banking business done throughout the United States by each commercial bank with headquarters in the four-county area. For each class of business the amount done by appellees is then expressed as a percentage of the total amount done by all those banks as though this figure represented a market share. For example, the combined total loans of appellees is computed to be 34% of all the loans held by banks physically located in the four-county area. There is no breakdown of these figures between the amounts representing loans made to customers inside the four-county area and those made to customers outside, although as to appellees it is known that 44% of their loans are made to borrowers located outside the four-county area (DX 30, R. 3167). Nor has appellant included

any figures showing the amount of loans made to customers inside the area by banks located outside the area, although witness after witness testified that large banks from New York and other cities regularly solicit and obtain business in the Philadelphia area (R. 3653; see fn., p. 10, *supra*).

No witness was offered by appellant to provide any interpretation or explanation of these figures or of their significance in support of appellant's theories. The district court necessarily concluded that there is no evidence disclosing appellees' portion of the banking business done in the four-county area or any other area (Fdgs. 56a-57a, R. 3496-3497).

CONCENTRATION IN COMMERCIAL BANKING

The proposed merger would reduce from 42 to 41 the total number of existing banks in appellant's four-county area capable of lending a single customer up to $10,000. It would reduce from 8 to 7 the number of banks in that area capable of lending as much as $1,000,000 to a single customer. It would not reduce the number of banks from New York, Boston, Chicago and other cities doing business in Philadelphia, but it would for the first time create a bank in Philadelphia capable of lending up to $15,000,000 to one borrower. The district court concluded that "all types of customers, including small businessmen, would have ample alternative choices for commercial banking services after the merger" (Fdg. 161a, R. 3511) and that the availability of these alternatives

"leads to the inescapable conclusion that any tendency toward monopoly or oligopoly at this stage is non-existent" (R. 3662).

Prior to 1951, PNB and Girard were wholesale banks dealing primarily with large customers (Fdg. 101a, R. 3502). Because of the population growth in suburban areas, the expansion of commerce and industry, and the increase in the importance of small customers, PNB and Girard independently changed their policies and began to enter into retail banking services and branch banking (Fdg. 102a, R. 3502-3503). The mergers which both banks engaged in after 1951 were for the purpose of effectuating this new policy (*Ibid.*). The district court concluded that "it has been shown that mergers with existing banks in the suburbs of Philadelphia were, in many cases, the only feasible way for larger banks to follow the migration of many of their customers into these areas. In addition, in many cases, it appears the small banks in the four-county area have found mergers with larger banks to be a solution to their problems of inadequate banking services, rising costs, and management succession." (R. 3661). The district court added that "although the defendants have engaged in prior mergers, these mergers have had valid business purposes as the motivating force" (R. 3661).

These mergers with smaller banks in the suburbs have increased the banking services available in those communities while at the same time they have not prevented substantial growth of the other banks in those

areas (Fdgs. 103a-105a, 108a-122a, R. 3503-3505). On the basis of the testimony of the Philadelphia banking witnesses, including appellant's one expert on Philadelphia banking (R. 976), the district court concluded that the effect of prior bank mergers in the Philadelphia area had been to increase and sharpen competition among commercial banks (Fdg. 107a, R. 3503).

The district court, after reviewing the "concentration" percentages computed by appellant,* found that "no dangerously potential concentration will result from this merger" (R. 3656-3658). In reaching this conclusion, the court considered percentage figures from other cities in the United States. On the following page there is set forth a list of 110 cities in the United States with population of 100,000 or more ranked in accordance with the percentage of total bank assets held by the largest bank in each city. The largest bank in each of 78 of those cities holds more than the 36.2% which would be held by the merged bank in Philadelphia. Moreover, of 224 cities with population of over 50,000, there are 190 which have a commercial bank holding 35% or more of the total commercial banking assets in the city, and 96 which have a bank holding more than 50% of such assets (DX 46, R. 3193-3207; Fdg. 136a, R. 3507). There was no evidence offered to show that such concentration in any bank in any city had given it an advantage

* As generally used by appellant the term "concentration" appears to mean the percentage of banking resources in a particular locality held by a bank or banks. See Fdgs. 374-384, R. 3411-3413.

(DX 47, R. 3208)

over other banks or had had any effect whatever on competition. The only evidence was to the contrary (R. 1954, 1956).

Lewellyn A. Jennings, former First Deputy Comptroller of the Currency, who had more than thirty years' experience in banking throughout the country (R. 1929-1935), testified that the large percentage of local bank assets held by the largest bank in so many cities is due to "a need in these communities for a lead bank large enough to accommodate the borrowing needs, the general banking needs of commerce and industry in the communities" (R. 1956). Mr. Jennings also testified that studies of banks over the ten-year period, 1946-1956, showed that in most large cities the largest banks lost ground to their competitors (R. 1958-1960; DX 46, R. 3195-3207; DX 21, R. 3099-3151), and that studies of the 100 largest banks in the United States showed that they held 56.7% of all commercial bank deposits in 1949 and only 45.7% in 1958 (R. 1962; DX 48, R. 3247). Finally, he stated that "concentration," measured as appellant measures it in this case, "is not an effective deterrent in any way to the adequate functioning and the competitive position of the smaller institutions" (R. 1959). This is consistent with the conclusion of the FDIC in a study of banking concentration (DX 48, R. 3258) that "..... there is no fixed relationship between changes in concentration and changes in competition."

REASONS FOR THE MERGER

Philadelphia area banks have met the postwar problems presented by the wider distribution of population and the increasing needs of individuals and of small businesses by enlarging the number of banking offices in the area from 178 to 283 and by providing a full line of banking services at these locations (GX 13(S), R. 2385; R. 1596-1598). There is ample banking accommodation to meet the needs of individuals and smaller businesses (R. 3660). On the other hand, banking resources and lending limits have not kept pace with the credit requirements of the larger local enterprises. Exhibit D 25 (R. 3157) shows that in the Philadelphia area between 1940 and 1960 the total sales of large corporations, value added by manufacture and personal income have each increased four-fold. During the same period the total assets of Philadelphia banks and the PNB lending limit, which is the largest in the area, have increased by only half as much. Although Philadelphia is fourth or fifth among the twelve largest metropolitan areas in the United States when ranked on the basis of the usual measures of economic activity, it ranks only ninth on the basis of the size of its largest bank (GX 57, R. 2531-2535).

PNB has a lending limit of $8,000,000 and Girard's limit is $6,000,000 (DX 15, R. 3052). On the basis of the testimony of executives of eight competing Philadelphia banks, executives of seven of the larger companies in the Philadelphia area, an officer of the Philadelphia Industrial Development Corporation, the

Mayor of Philadelphia, a former First Deputy Comptroller of the Currency and a member of the Pennsylvania State Banking Board, the district court found "There is presently no Philadelphia bank large enough to serve adequately the banking needs of large industry in the Philadelphia area" (Fdg. 178a, R. 3513).

The district court found that the higher lending limit of $15,000,000 and the additional resources of the merged bank would permit it to serve more adequately the credit requirements of large industry, to give greater assistance to new or growing companies, and to attract new business to the Philadelphia area, which in turn would benefit other local banks (Fdgs. 193a-207a, R. 3517-3518).

As a result of the inadequacy of banking resources in the Philadelphia area, larger local enterprises have been forced to establish relationships with banks in other cities. Each appellee has lost business as a result of this movement and each is greatly concerned that it will lose more as its present customers' banking requirements increase (R. 1613-1623, 1699, 1706).

The numerical extent of the competition which appellees face from larger banks in other metropolitan centers is evident from the fact that there are twenty commercial banks in the United States which have lending limits greater than that of PNB, of which nine are in cities smaller than Philadelphia (DX 24, R. 3154; Fdg. 135a, R. 3507). The intensity of com-

petition from banks in other cities was attested to by the local businessmen and bankers who testified (Fdg. 52a, R. 3495-3496; see fn., p. 10, *supra*). For example, it was said that Philadelphia "swarms" with solicitors from outside banks (R. 1825-1826); that deposit accounts from $10,000 up are regularly sought in Philadelphia by outside banks (R. 2025-2028); and that Philadelphia is the "happy hunting ground" for New York banks (R. 1899). None of this testimony was contradicted.

The fundamental reason for the proposed merger is to correct this imbalance in Philadelphia and to meet this competition from larger banks throughout the country by providing a bank in Philadelphia with resources, lending limit and services more in keeping with the banking requirements of the larger local enterprises. This business is important to appellees. In June 1960, at least 70% of PNB's total business demand deposits were from customers for whom there is competition from banks elsewhere. Loans to such customers amounted to 74% of all its commercial and industrial loans (DX 43, R. 3185). In the case of Girard, at least 55% of its business demand deposits and 59% of its commercial and industrial loans were those of customers of the same type (DX 43, R. 3185).

Although the substantial resources and higher lending limit of the merged bank will tend to attract larger customers, to be truly competitive with the New York banks the merged bank must also offer more specialized services than are presently possible

with the existing resources and staff of each appellee. For example, departments will be organized by categories of industries in order to render expert business and banking advice (R. 1607-1608, 1710). The additional resources will also enable the bank to develop its foreign services by increasing the capital of PNB's international investment company and by forming an international banking corporation with an office in New York and, later, London (R. 1710-1712).

The district court summarized this final aspect of the case by saying (R. 3667):

> "The testimony discloses that the competitive effect upon all Philadelphia commercial banks will be minimal. The larger bank, however, will be able to compete on better terms and in a better atmosphere with the banks of other cities and states that have been draining this area of banking business which might well be and perhaps properly should be handled here, and which cannot be handled under present circumstances. That it will benefit the city and area has been established clearly by a fair preponderance of the evidence, as has been set forth in the Findings of Fact of the defendants previously affirmed."

SUMMARY OF ARGUMENT

I

Section 7 of the Clayton Act is inapplicable because the proposed merger does not involve an acquisition of stock. *Arrow-Hart & Hegeman Elec. Co.* v. *Federal Trade Commission*, 291 U.S. 587 (1934);

United States v. *Celanese Corp.*, 91 F. Supp. 14 (S.D.N.Y. 1950); *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 313 (1962). The 1950 amendment extended the Act to control asset acquisitions, but only in the case of corporations subject to the jurisdiction of the Federal Trade Commission, and banks are not subject thereto. The inapplicability of section 7 of the Clayton Act to bank mergers has been consistently recognized by Congress, and was repeatedly asserted by the Department of Justice until it brought this suit.

II

The decision below was based on appellees' evidence that the proposed merger will not create an unreasonable restraint of trade in violation of section 1 of the Sherman Act, and also on the absence of any evidence from appellant that the merged bank will have the power to inhibit competition, to dominate or influence its competitors or to affect adversely the availability and adequacy of banking services to the public.

Appellees' evidence, consisting of testimony of experts with long experience in commercial banking, and of many bankers and businessmen in the Philadelphia area, showed that the merger could not and would not have an adverse effect on competition. This evidence showed that a large bank has no competitive advantage over smaller banks for business within the resources of the smaller bank, that small banks grow more rapidly than large banks, and that

because of the nature of banking and the vigor of competition among the 41 Philadelphia area banks the merged bank will have no power to affect adversely its competitors or banking competition.

The evidence showed that past mergers of Philadelphia area banks were a response to the needs of the area for better banking service. Those mergers did not adversely affect competition but on the contrary increased and sharpened it. Appellant's claim of "undue concentration" is nothing more than the use of a term common to antitrust cases involving industrial or commercial business and is based solely on statistics. Appellant made no attempt to explain the applicability of that concept to commercial banking. Banking "concentration" in Philadelphia after the proposed merger will be well below that in most other large cities, none of which was shown to be without effective banking competition or adequate banking service.

Appellant fails to recognize the essential differences between competition in commercial banking and competition in other industries. These differences arise from the unique nature of commercial banking and money and credit, and from the effect of governmental regulation which restricts competition in banking for the protection of depositors and the public. The result is that competition among banks is largely limited to convenience and quality of service and involves "price" competition only to a minor degree. Small banks can thus compete effectively with large banks for business within the range of the resources of the small bank.

Ignoring this fundamental difference appellant seeks to apply to this case the concept of "share of the market" utilized in antitrust cases involving industrial and commercial enterprises. Moreover, the statistics introduced by appellant are restricted to Philadelphia and three of its six contiguous counties and are meaningless since the relevant geographic market is far larger than those four counties. Appellant's statistics are also valueless because they include as banking business in the Philadelphia area all of the business of Philadelphia area banks from wherever derived and because they exclude extensive business done in the area by banks located in New York and elsewhere.

The evidence also establishes that the purpose of the proposed merger is to give Philadelphia for the first time a bank large enough to meet the banking needs of the larger business customers in the area and to check the flow of banking business from the Philadelphia area to large banks in New York and other cities. The merged bank will have the resources necessary to retain and acquire such business and to offer competition which does not now exist, all of which will in turn benefit the entire Philadelphia community. This benefit to the community and increase in competition will promote, not defeat, the Congressional purposes expressed in the Bank Merger Act of 1960 and the antitrust laws.

ARGUMENT

I. SECTION 7 OF THE CLAYTON ACT IS NOT APPLICABLE BECAUSE THE PROPOSED MERGER WILL NOT INVOLVE AN ACQUISITION OF STOCK.

Appellant is seeking in this case to have this Court do what Congress has repeatedly refused to do—apply the Clayton Act to bank mergers. The plain meaning of section 7 of the Act, the settled interpretation of that language by this Court and the repeated manifestations of Congressional intent forbid that result.

Section 7 of the Clayton Act as originally enacted in 1914 applied only to acquisitions of "stock or other share capital." When this section was amended by the Act of December 29, 1950, 64 Stat. 1125, 15 U.S.C. § 18, to extend its application to acquisitions of assets, the extension applied only to corporations "subject to the jurisdiction of the Federal Trade Commission." Banks are not subject to the jurisdiction of the Federal Trade Commission* so that, as appellant admits (Appellant's Brief, p. 74), section 7 applies to the proposed merger only if it involves an acquisition of stock as that term is used in the Act. That is not the case here.

A merger of corporations does not involve an acquisition by the resulting corporation of stock of any of the corporations participating in the merger.

* Federal Trade Commission Act, § 5(a)(6), 38 Stat. 719, as amended, 15 U.S.C. § 45(a)(6); Clayton Act, § 11, 38 Stat. 734, as amended, 15 U.S.C. § 21.

This Court so ruled in *Arrow-Hart & Hegeman Elec. Co.* v. *Federal Trade Commission*, 291 U.S. 587 (1934), which involved the question whether the language here invoked by appellant applied to a statutory merger under a state law substantially the same as section 215 of the national banking laws (Appendix, p. 82), under which the proposed merger will take place. It was said in that case:

> "The statute does not forbid the acquirement of property, or the merger of corporations pursuant to state laws, nor does it provide any machinery for compelling a divestiture of assets acquired by purchase or otherwise, or the distribution of physical property brought into a single ownership by merger." (291 U.S. at 595).
>
> "If the merger of the two manufacturing corporations and the combination of their assets was in any respect a violation of any antitrust law, as to which we express no opinion, it was necessarily a violation of statutory prohibitions other than those found in the Clayton Act." (291 U.S. at 599).

That decision was by a divided Court but the dissenting opinion agreed that "It is true that the Clayton Act does not forbid corporate mergers * * *." (291 U.S. at 600).

Appellant seeks to explain away this Court's interpretation of the stock acquisition clause of section 7 by saying that it should be "limited by its context" (Appellant's Brief, p. 73, fn. 56). But even in its con-

text the opinion in *Arrow-Hart* has been recognized as confirming the plain meaning of section 7 that the stock acquisition clause does not cover corporate mergers. *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 313 (1962); *United States* v. *Celanese Corp.*, 91 F. Supp. 14 (S.D.N.Y. 1950); *Report of the Attorney General's National Committee to Study the Antitrust Laws* 115-116 (1955).* The very fact of the limited scope of the original section is what led to the extension of the statute by the 1950 amendment to cover acquisitions of assets by corporations subject to the jurisdiction of the Federal Trade Commission. H. Rep. No. 1191, 81st Cong., 1st Sess. 5, 11-12 (1949); S. Rep. No. 1775, 81st Cong., 2d Sess. 2 (1950); *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 316 (1962).

Appellant's argument ignores not only this background of the settled interpretation of the stock acquisition clause of section 7 but also the recognized legal effect under applicable law of the transaction proposed by appellees. Under the national banking statutes the only transfer which will occur in the proposed merger will be the transfer by operation of law

* Appellant refers on pages 19 and 79 of its brief to this Court's summary of the government's complaint in *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 296 (1962). While the complaint alleged in paragraph 15 that Brown would acquire the stock of Kinney, this was denied in the answer. The point received no further attention since Brown was subject to the jurisdiction of the Federal Trade Commission and therefore clearly subject to section 7. Appellant admits in a footnote that the question "was not raised or argued."

of the assets of Girard to the resulting bank. 73 Stat. 462. 12 U.S.C. § 215(e) (Supp. II) (Appendix, p. 82); *Ex parte Worcester County National Bank*, 279 U.S. 347, 360 (1929); *United States* v. *Seattle-First National Bank*, 321 U.S. 583, 587-589 (1944). Since the corporate existence of Girard is automatically merged into and continued in the resulting bank, the shares of stock owned by the shareholders of Girard will not be acquired or transferred but will automatically be converted into the number of shares of stock of the resulting bank stipulated in the Agreement of Consolidation with appropriate adjustments for fractional shares. The section of the Agreement (GX 119, R. 2721-2724) dealing with the exchange of certificates evidencing the shares of the resulting bank into which the Girard shares will have been converted merely provides the mechanics for handling the certificates in order to reflect this result.*

There are many differences between an acquisition of stock and a merger. For example, a merger such as appellees' may be effected upon the affirmative vote of the holders of only two-thirds of the outstanding stock of each bank. 12 U.S.C. § 215; but if PNB were acquiring all of the Girard stock each Girard shareholder could decide for himself whether to transfer his shares. A merger requires public notice whereas

* As pointed out by the district court (R. 3643-3645), the Agreement was expressly made pursuant to the terms of section 215 of the national banking laws and thus there is no basis for suggesting that the Agreement, even if it could do so, would achieve a result different from that provided by section 215(e) of such laws.

stock can be acquired privately. A shareholder dissenting from a merger has the right to receive the appraised value of his shares, 12 U.S.C. § 215, whereas no shareholder has a comparable right in an acquisition of stock. Furthermore the corporate existence of a merged company is terminated by a merger, but remains unaffected by an acquisition of stock. In sum, the merger of appellees has none of the characteristics of an acquisition of stock within the meaning of section 7 or the fundamentals of corporation law.

Appellant also argues that a merger is different from a "normal" acquisition of assets for cash because the latter does not involve a continuity of interest by the shareholders of both corporations.* It then argues that this continuity of interest "must have appeared the primary threat to competition when the first section 7 was passed in 1914" (Appellant's Brief, p. 76). This argument ignores the fact that a purchase of stock for cash, which is clearly covered by section 7, also extinguishes the interest of the old stockholders, and that an acquisition of assets in exchange for stock involves a continuity of interest. More importantly, the argument misrepresents the legislative purpose in enacting section 7. As this Court recently stated in *Brown Shoe Co.* v. *United States*,

* Appellant says that the district court determined that the merger involved an asset acquisition (Appellant's Brief, p. 12). Actually it determined merely that the merger was not within section 7 because it did not involve a stock acquisition (R. 3644).

370 U.S. 294, 313-314 (1962), in reviewing the legislative history of the section:

> "The possibility of asset acquisition was discussed, but was not considered important to an Act then conceived to be directed primarily at the development of holding companies and at the secret acquisition of competitors through the purchase of all or parts of such competitors' stock."

Nor does the 1950 amendment to section 7 lend any support to appellant's argument, for banks were excluded from the extension of the Act to acquisitions of assets. In fact, following the 1950 amendment, numerous bills were introduced to extend section 7 to cover bank mergers.* These bills were not passed. Instead, Congress passed the Bank Merger Act of 1960, 74 Stat. 129, 12 U.S.C. § 1828(c) (Supp. II), which vested the authority to pass upon bank mergers in the federal banking agencies and required those agencies to consider the competitive factor along with six banking factors in determining whether a merger would be in the public interest.

Appellant admits that the legislative history of the Bank Merger Act shows a recognition by the Department of Justice and the Congressional committees that section 7 does not apply to bank mergers (Appellant's Brief, p. 72) but now tries to explain away

---

* These bills are summarized in Funk, *Antitrust Legislation Affecting Bank Mergers*, 75 Banking L. J. 369 (1958). See also Wemple & Cutler, *The Federal Bank Merger Law and the Antitrust Laws*, XVI Bus. Law. 994 (1961).

this fact by stating that these views were "not directly involved." This has not heretofore been the considered opinion of the Department of Justice but is one that has been conceived for the purposes of this case. Thus, appellant's present contention that a bank merger is subject to the Clayton Act is in direct conflict with the proposals for legislation made by Attorneys General for years prior to the enactment of the Bank Merger Act of 1960. Repeatedly they stated to Congress that section 7 does not apply to bank mergers.* For example, Attorney General Brownell, speaking of bank mergers, told the Senate Committee on Banking and Currency (Hearings Before a Subcommittee of the Senate Committee on Banking and Currency on the Financial Institutions Act of 1957, 85th Cong., 1st Sess., Part 2 at 1030 (1957)):

> "On the basis of these provisions the Department of Justice has concluded, and all apparently agree, that asset acquisitions by banks are not covered by section 7 as amended in 1950."

---

* Hearings Before a Subcommittee of the Senate Committee on Banking and Currency on the Financial Institutions Act of 1957, 85th Cong., 1st Sess., Part 2 at 1030, 1033 (1957); Hearings Before the Antitrust Subcommittee of the House Committee on the Judiciary, 85th Cong., 1st Sess., Ser. 2 at 43, 49, 72 (1957); Hearings Before the Antitrust Subcommittee of the House Committee on the Judiciary, 84th Cong., 1st Sess., Ser. 3, Part 1 at 244, 266 (1955); Hearings on S. 3911 Before a Subcommittee of the Senate Committee on Banking and Currency, 84th Cong., 2d Sess. at 61, 66 (1956); Hearings Pursuant to S. Res. 231 Before the Subcommittee on Antitrust and Monopoly of the Senate Committee on the Judiciary, 85th Cong., 2d Sess. at 182 (1958); Hearings on S. 1062 Before the Senate Committee on Banking and Currency, 86th Cong., 1st Sess. at 9 (1959).

The inapplicability of section 7 to bank mergers was not only a representation made to Congress by the Department of Justice but was also recognized by it as a basis for the conduct of its duties. In passing upon an application for informal clearance of a bank merger in 1955, the Department stated (Hearings Before the Antitrust Subcommittee of the House Committee on the Judiciary, 84th Cong., 1st Sess., Ser. 3, Part 3 at 2141 (1955)):

> "After a complete consideration of this matter, we have concluded that this Department would not have jurisdiction to proceed under section 7 of the Clayton Act. For this reason this Department does not presently plan to take any action on this matter."

The fact that section 7 does not apply to bank mergers was a principal reason for the enactment of the Bank Merger Act. Thus the Report of the House Committee on Banking and Currency, under the heading "Need for Improved Controls Over Bank Mergers," concluded:

> "The Federal antitrust laws are also inadequate to the task of regulating bank mergers; while the Attorney General may move against bank mergers to a limited extent under the Sherman Act, the Clayton Act offers little help." H. Rep. No. 1416, 86th Cong., 2d Sess. 5 (1960); see also p. 9 of the Report.

The Senate Report similarly states:

> "Since bank mergers are customarily, if not invariably, carried out by asset acquisitions, they

are exempt from section 7 of the Clayton Act. (Stock acquisitions by bank holding companies, as distinguished from mergers and consolidations, are subject to both the Bank Holding Company Act of 1956 and sec. 7 of the Clayton Act.)" S. Rep. No. 196, 86th Cong., 1st Sess. 1-2 (1959).

"In 1950 (64 Stat. 1125) section 7 of the Clayton Act was amended to correct these deficiencies. Acquisitions of assets were included within the section, in addition to stock acquisitions, but only in the case of corporations subject to the jurisdiction of the Federal Trade Commission (banks, being subject to the jurisdiction of the Federal Reserve Board for purposes of the Clayton Act by virtue of section 11 of that act, were not affected)." *Id.* at 5.

This was also recognized by Representative Spence, Chairman of the House Committee on Banking and Currency, when he said during debate on the bill:

"The Clayton Act is ineffective as to bank mergers because in the case of banks it covers only stock acquisitions and bank mergers are not accomplished that way." 106 Cong. Rec. 7257 (1960).*

The exclusion of bank mergers from the prohibitions of section 7 is no mere "otherwise-wholly-irrational distinction" (Appellant's Brief, p. 77) but

* Similar statements appear throughout the legislative debates. See 105 Cong. Rec. 8076 (Sen. Robertson), 8128 (Sen. Clark), 8130 (Sens. Sparkman and Javits) (1959); 106 Cong. Rec. 9711-12 (Sen. Fulbright), 9715 (Sen. Johnson) (1960).

is rather the result of a deliberate legislative policy that banks cannot be governed by the same antitrust rules as those governing industrial and commercial corporations. As Senator Robertson, chairman of the Senate Committee on Banking and Currency, stated during the debate on the Bank Merger Act:

> "The significance of the banking system to the monetary and fiscal policies of the Government, to the businesses and individuals who depend on bank loans for growth and development, and to depositors who must have confidence in the security of their deposits, is too important to permit unrestricted competition.
>
> "In the opinion of the committee it is impossible to subject bank mergers to the simple rule of section 7 of the Clayton Act. Under that act, a merger would be barred if it might tend substantially to lessen competition, regardless of the effects on the public interest." 105 Cong. Rec. 8076 (1959).

See also S. Rep. No. 196, 86th Cong., 1st Sess. 19-20 (1959).

Federal regulation of banking began long before the passage of the Sherman Act, and in the year before the Clayton Act was passed Congress adopted the Federal Reserve Act, which provided extensive regulation for national banks and also for state banks which joined the Federal Reserve System. Following the disastrous period of bank failures in the late 1920's and early 1930's, the Federal Deposit Insurance Act was passed and the Federal Reserve Act was

amended to restrict further the freedom of action of banks. Under the power vested in the federal banking agencies by these various acts, the agencies have exercised stringent supervisory authority over banks, leading one commentator to describe this system of regulation as more intensive than the regulation of any other industry. 1 Davis, *Administrative Law Treatise* § 4.04.

This scheme of federal regulation in the banking field reflects the Congressional policy that free competition among banks must be subordinated to the preservation of a sound banking structure. As Senator Fulbright, one of the sponsors of the Bank Merger Act, stated during the debate on that bill:

> "Banking is too important to depositors, to borrowers, to the Government, and the public generally, to permit unregulated and unrestricted competition in that field.
>
> "The antitrust laws have reflected an awareness of the difference between banking and other regulated industries on the one hand, and ordinary unregulated industries and commercial enterprises on the other hand. The 1950 amendment to section 7 of the Clayton Act, which for the first time imposed controls over mergers by means other than stock acquisitions, did not apply to bank mergers which are practically invariably accomplished by means other than stock acquisition. Accordingly for all practical purposes bank mergers have been and still are exempt from section 7 of the Clayton Act." 106 Cong. Rec. 9711 (1960).

"It is this distinction between banking and other business which justifies different treatment for bank mergers and other mergers. It was this distinction that led the Senate to reject the flat prohibition of the Clayton Act test which applies to other mergers." *Id.* at 9712.

In adopting the Bank Merger Act of 1960 Congress decisively rejected the proposals to subject bank mergers to section 7. By so doing it reaffirmed the recognized and settled interpretation of the statute as its legislative will.* What appellant asks this Court to do, therefore, is not merely to legislate but also to create an antitrust prohibition which Congress has expressly refused to enact.

Although the district court concluded that section 7 is not applicable to this merger, it nonetheless applied the standards of that section in order to resolve

* This Court recently emphasized that it would not disturb prior decisions where Congress had adopted regulatory legislation with specific reference to those prior decisions. The Court said:

> "Since these earlier decisions are part of the arch on which the new structure rests, we refrain from disturbing them lest we change the design that Congress fashioned." *State Board of Insurance* v. *Todd Shipyards Corp.*, 370 U.S. 451, 458 (1962).

An example of the effect on the Congressional scheme of regulation of bank mergers which would result from a ruling that they are within the scope of the Clayton Act is found in the expansion of the powers of the Federal Reserve Board which would be a consequence of such ruling. Under the Bank Merger Act the Comptroller of the Currency approved this merger and the Federal Reserve Board had merely an advisory function. If bank mergers such as this constitute stock acquisitions, the Federal Reserve Board would also have authority under Section 11 of the Clayton Act, 38 Stat. 734, as amended, 15 U.S.C. § 21, to set aside the merger.

all questions expeditiously and found that the proposed merger would not substantially lessen competition or tend to create a monopoly (R. 3646, 3668). Appellant's factual argument in this Court is primarily based upon an alleged violation of section 1 of the Sherman Act, and therefore the balance of appellees' Argument will be similarly restricted. However, virtually everything which follows hereafter and which demonstrates that there has been no violation of section 1 of the Sherman Act is applicable to the standards of the Clayton Act.

II. THE EVIDENCE AFFIRMATIVELY SHOWS THAT THE PROPOSED MERGER WILL NOT RESULT IN AN UNREASONABLE RESTRAINT OF TRADE WITHIN THE BAN OF SECTION 1 OF THE SHERMAN ACT.

The granting of an injunction under the Sherman Act must be governed by the same high standards of proof applicable in other cases. Chief Justice Hughes stated in *Appalachian Coals, Inc.* v. *United States*, 288 U.S. 344, 377 (1933):

> "The fact that the suit is brought under the Sherman Act does not change the principles which govern the granting of equitable relief. There must be 'a definite factual showing of illegality.'"

See also *United States* v. *Yellow Cab Co.*, 338 U.S. 338, 341 (1949).

In this case appellant has been forced to abandon as worthless the testimony of its witnesses* and now

* The district court said the theories of appellant's principal witnesses "were completely destroyed on cross-examination" (R. 3634).

bases its prayer for injunction on inferences derived from statistics, inferences which were flatly negated by the testimony of qualified bankers, businessmen and economists. Appellant's evidence does not meet the test of "a definite factual showing of illegality", and the district court so found (R. 3662-3663).

A. COMPETITION IN COMMERCIAL BANKING IS FUNDAMENTALLY DIFFERENT FROM COMPETITION AMONG INDUSTRIAL AND COMMERCIAL BUSINESSES.

The effects of a merger under the antitrust laws must be examined in the context of the unique conditions of the particular business. *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 321-322 (1962); *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 527-528 (1948). Such an approach is of special importance in this case, the first in which this Court has had to review the application of the antitrust laws to a bank merger. The district court recognized, as has Congress (Appendix, pp. 85, 87, 91, 96-97, 106), that commercial banking is fundamentally different from industrial and commercial businesses (R. 3635; Fdg. 9a, R. 3490; R. 1522, 1977-1979). Appellant seeks to obscure this by asserting that such a distinction would exclude banking from the antitrust laws or weaken or modify their effect on banking (Appellant's Brief, pp. 15, 25-26). What the district court found was merely that in measuring the effect of the merger on competition among banks, the special nature of that competition must be recognized and given effect. It

accordingly made detailed findings with respect to the character of the competition which exists among commercial banks (Fdgs. 9a-43a, R. 3490-3493).

The unique characteristics of competition among commercial banks arise from the nature of commercial banking and the effect on it of governmental regulation. Banks are dependent for the bulk of the funds with which they operate on the will, or whim, of their depositors. They do not own the funds they lend, they owe them (R. 1977, 1522). No matter how large or small a bank may be it cannot prevent its depositors from withdrawing all of their demand deposits at any time (Fdg. 27a, R. 3492; R. 1562, 1977-1978). As for its borrowers, the money market and the forces that control interest rates are so vast that no bank can raise the interest rates it charges on loans above current levels without losing its borrowers to other banks (Fdg. 33a, R. 3492; R. 938, 1555-1556). Stated in other terms, banks have no power to control the supply of the raw material they use nor to dominate their customers, and an almost negligible ability to vary the prices they pay or charge. For the same reasons one bank cannot dominate others.

The type of business a bank may do is limited by governmental restrictions on the nature, amount, volume and purpose of the loans it may make, by regulations requiring that a bank's investments be of a certain high rating, by strict requirements of liquidity of assets enforced by bank examiners, and by the dictates of sound banking practice on ratios of capital,

loans and deposits, which the periodic examination of banks by federal and state authorities assures (Fdgs. 14a, 22a-25a, R. 3490-3492; R. 1523-1528, 1547-1548, 1551, 1943-1945). A bank's profits are limited not only by these factors but also by the narrow range of interest rates it may charge on loans within the legal and practical maximum fixed by usury laws and a fluctuating minimum set by the money market in response to forces over which only the government has any control (Fdgs. 15a-18a, 26a, R. 3490-3492; R. 938, 1364-1369, 1543-1546, 1552-1555, 1941-1942). Accordingly, customers with the highest credit rating may demand and obtain the minimum, or "prime rate", whatever it may be. A bank's power to attract the deposits it must have to do its business is restricted by governmental regulation of the interest it may or may not pay on deposits (Fdg. 13a, R. 3490; R. 1366, 1537). As a result, competition among commercial banks is narrowly limited. It consists primarily of convenience and quality of service, and involves "price" competition only to a minor degree (Fdgs. 12a, 26a, 28a-29a, 32a-37a, R. 3490, 3492-3493; R. 1364-1365, 1942). This limitation of competition is not merely the result, it is the very purpose of the extensive governmental regulation of commercial banks (Fdg. 11a, R. 3490; R. 1365). The public interest in the soundness of the banking system and the protection of depositors requires that commercial banking not be subjected to those competitive pressures which, under our economic system, are relied on to determine the course of indus-

trial and commercial businesses (Appendix, pp. 86-88, 107, 108).

The effect of governmental regulation on banking competition was recognized by Congress in its consideration of the Bank Merger Act. The House Report states, "banking is a licensed and strictly supervised industry that offers problems acutely different from other types of business"; and the Senate Report similarly declares, "it is impossible to require unrestricted competition in the field of banking and it would be impossible to subject banks to the rules applicable to ordinary industrial and commercial concerns, not subject to regulations and not vested with a public interest." H. Rep. No. 1416, 86th Cong., 2d Sess. 9 (1960); S. Rep. No. 196, 86th Cong., 1st Sess. 16 (1959).

Appellant has failed throughout this case to appreciate the differences between competition in commercial banking and that existing in other businesses. Wholly disregarding these differences it indiscriminately uses percentages and theories from cases involving other businesses and brushes to one side the testimony of persons familiar with commercial banking that these percentages and theories do not support the conclusions which appellant seeks to draw from them. Such an approach was expressly disapproved by this Court in *Federal Communications Commission* v. *RCA Communications, Inc.*, 346 U.S. 86, 98 (1953), as follows:

> "What may substantially lessen competition in those areas where competition is the main

> reliance for regulation of the market cannot be automatically transplanted to areas in which active regulation is entrusted to an administrative agency; for reasons we have indicated above, what competition is and should be in such areas must be read in the light of the special considerations that have influenced Congress to make specific provision for the particular industry."

By employing such extravagant terms as "huge banks," "immediate dominance," "concentration of banking power," "dominant giant" (Appellant's Brief, pp. 16, 17, 71, 82) appellant seeks to distract attention not only from its use of inapplicable tests as a basis for its conclusions but also from the total absence of evidence supporting any of its conclusions. The use of such terms cannot obscure the fact that the record shows the inability of a large bank to affect the business done by smaller banks, to suppress or stifle competition, to limit the freedom of action of other banks, to control the activities of its customers, to fix the price of money or to create a monopoly.

B. THE "MARKET SHARES" WHICH ARE THE PRINCIPAL BASIS OF APPELLANT'S CASE ARE SO DISTORTED AS TO BE MEANINGLESS.

Market shares are only one of the factors which must be considered in determining the effect of a merger on competition. In this case, they form the principal thrust of appellant's attack. Thus, it is important to appreciate at the outset that appellant has freely used selected statistics which inflate the appar-

ent size of appellees' shares of local business. Actually the percentages offered by appellant do not establish a basis for determining appellees' share of any market.

Any attempt to test commercial banking against traditional antitrust concepts must start with facts that are basic to banking. The concepts of geographic market and product market cannot be applied in the customary way to commercial banking. "Money knows no home;" it goes where the return is greatest (R. 1535-1536). It is impossible to place useful geographic boundaries around such broad categories as "loans" or "deposits" or "trust business." Only when these terms are related to each of the many different types of customer can any geographic division begin to have meaning. Large borrowers and large depositors find it worthwhile to go long distances, even outside the country, to obtain the best terms. As to some the market is worldwide and as to many others the market is at least nationwide.* At the other end of the scale is the person of modest means who is unable, nor is it worth his while, to do his banking more than a short distance from home. All this is necessary to an understanding of the significance of the district court's finding that the key to a study of competition in banking is the number and location of alternative choices available to any customer (R. 3653).

* The statement on page 35 of appellant's brief that "banking customers within a given area do not readily use the services of comparatively distant banks" is not supported by the record. See fn., page 10, *supra*.

Only when statistics reflect those facts can they have any meaning in a banking antitrust case. See Appendix, pages 99-100.

Some knowledge of the volume and kind of business done in a given area by all banks, wherever located, is essential to an insight into the level of competition in banking in that area. Not one clue to this can be found in appellant's statistics, and for that reason they are valueless in this case.

Although the evidence is undisputed that appellees compete for a significant volume of business throughout the northeastern United States and, with respect to some of their services, throughout the entire country, appellant argues that the market should be narrowed to the small area consisting of Philadelphia County and the three contiguous Pennsylvania counties of Bucks, Delaware and Montgomery. This excludes even the three contiguous New Jersey counties and the other areas, both within and outside Pennsylvania, which make up the economic and industrial complex known as the "Delaware Valley".* Moreover, in computing appellees' alleged share of the banking business in this area appellant has included, as though it were derived therefrom, all of appellees' business, wherever obtained. In addition, appellant has included in its computations only the business of the commercial banks with head offices physically located in the four-county area despite the undisputed evidence that many other banks from

* This area is shown on the map appearing on page 11 *supra*.

cities throughout the country solicit and obtain substantial business there.

1. *The four-county area proposed as the relevant market by appellant does not correspond to the economic or commercial realities of commercial banking in the Philadelphia area.*

After giving recognition to the intricate and complex overlapping of numerous markets in the field of banking (Fdgs. 44a-53a; R. 3494-3496, 3652-3653), the district court found as a fact that the geographic market in which the proposed merger should be tested is far larger than the four Pennsylvania counties to which appellant restricted its evidence (Fdg. 53a, R. 3496, 3652-3653). The court reached this conclusion on the basis of extensive testimony that competition for commercial banking services must be measured by the location of alternative sources from which a banking customer can obtain such services (Fdgs. 44a, 46a, R. 3494; R. 1371-1374).

A relevant geographic market must "both 'correspond to the commercial realities' of the industry and be economically significant." *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 336-337 (1962). The nature of commercial banking permits wide mobility for banks and their customers. The transportation cost of money is zero. Loans can be arranged by telephone, deposits can be made by mail (R. 2065, 1376). There is nothing for a banking customer to try on or look at nor is there any problem of spoilage. A striking

illustration of this mobility is the number of representatives of the large banks in New York and elsewhere who are in Philadelphia continuously soliciting business,* and conversely the number of customers located in the Philadelphia area who go to New York or other cities when their banking needs cannot be met by banks located in Philadelphia (R. 1609-1625, 2152, 2254-2256). As the district court said (R. 3653):

> "It was very surprising to learn at the trial of this case that not only New York banks solicit and receive substantial business from customers within the four-county area, but also large banks from all the larger cities in the nation do likewise."

Appellant ignores the economics of the Philadelphia area. The city stands at the center of the "Delaware Valley," an area much larger than the four counties, bounded by Trenton on the north and Wilmington on the south. The standard census area includes not only the four counties but also Chester, Camden, Burlington and Gloucester Counties and the evidence establishes that this is properly considered the metropolitan area from the standpoint of the economy of the region (R. 2273-2276).

Bank customers are not restricted by political boundaries in seeking banking accommodation. For example, many individuals working in Philadelphia live in other Pennsylvania counties or in New Jersey

* See fn., page 10, *supra*, particularly the testimony at R. 1626-1628, 2025-2028.

and consequently have available banking choices in each area. Similarly, individuals living in Pennsylvania work in Trenton, New Jersey, or in Wilmington, Delaware, and deal with banks in those cities (R. 1633-1634). This interrelationship of the entire area is even more significant for industrial and business customers in view of the role which Philadelphia plays in providing essential services for the area.

Appellant seeks to overturn the district court's findings of fact by pointing to the limitation of appellees' offices to the four-county area under Pennsylvania law,* to selected statistics on the source of certain types of appellees' business, to but one of the several reasons why appellees open branches, and to the advisory opinions of the Federal Reserve Board and Federal Deposit Insurance Corporation (Appellant's Brief, pp. 34-37).† None of these shows the district court's conclusion to be erroneous.

The suggestion that the four-county area must be the relevant geographic market because appellees have opened branch offices to follow their customers and because such offices are located only in the four-county area, is refuted by the mobility of bank customers

* In Pennsylvania a bank may open branches only in the county in which its principal office is located or in a county contiguous to it in the same state.

† Appellant erroneously states (Appellant's Brief, p. 10) that the FDIC considered appellees to be in competition principally with banks in the four-county area, when in fact the report explicitly recognized that appellees are "active competitors" of banks in a far broader area, including New York and Pittsburgh (GX 163, R. 2848-2850).

and the existence of numerous banking alternatives outside the area.

Appellant's use of statistics emphasizing the physical location of appellees' customers is likewise misleading.* In an effort to show a strictly local market, appellant separates commercial banking into its component parts in order to emphasize those banking services which are local in nature, such as savings deposits and loans to individuals. If the market is to be determined on the basis of particular banking services, it is at least equally relevant that 43% of appellees' commercial and industrial loans, a major source of a bank's income, are made to customers outside the four-county area (DX 63, III, R. 3286). Furthermore, although appellant breaks down commercial banking to give emphasis to the local services rendered by appellees, it ignores the intense competition offered appellees by other financial institutions in these same services. See Appendix, pages 100-101. For instance, appellees' combined share of all time and savings accounts in all institutions in the four-county area is less than 6% (DX 32, R. 3168), their share of real estate loans is less than 3% (DX 65, R. 3287) and

* The language, "primary area," used on page 34 of appellant's brief to describe the significance of the four-county area for appellees' business, is almost identical with language used in most of the findings requested by appellant referred to in the table on that page. All of those requests were refused by the district court, which approved the statistical tables that accompanied these findings but said that "the conclusions therefrom which the plaintiff asked the court to draw are denied, and the remaining parts are refused as stated" (R. 3664).

the number of their non-bank competitors making loans is in the hundreds (DX 65, R. 3288-3291; DX 66, IV, R. 3295-3297).

More importantly, if one considers the locations of the customers' alternative choices, which the district court found to be the proper test, the most relevant statistics are that 68% in amount of appellees' commercial and industrial loans are made to, and 64% of their business demand deposits are received from, customers with known alternative choices outside the four-county area (Fdg. 52(e)a, R. 3496; DX 43, R. 3185)*. In these circumstances the use of the four-county area as a geographic market to test the competitive effect of the merger is totally unrealistic.

Finally, appellant's reference to the advisory opinion of the Federal Reserve Board is one of the numerous instances of appellant's reliance (Appellant's Brief, pp. 15, 37, 61, 63) on that board's opinion because of the lack of any affirmative evidence in this case which supports appellant's views. The Board's opinion was not supported by any witness, and was based on material which was not made part of this record and therefore could not be tested at the trial. It is thus entitled to no weight. See *United States* v. *International Harvester Co.*, 274 U.S. 693, 703 (1927). As an opinion announced prior to this suit, it

* In view of these undisputed facts, appellant's statement (Appellant's Brief, p. 38) that only appellees' "few largest" customers "may" have choices outside the four-county area is insupportable, to say the least.

was necessarily formed without the benefit of the facts developed in the course of the trial. It was upon the basis of those facts that the district court reached its conclusion.

2. *Appellant's statistics do not separate the business of local banks done outside the four-county area from that done within it.*

Appellant's constant repetition of its inflated percentage figures cannot hide the fact that these figures do not represent appellees' shares of the banking business in the four-county area. Appellant's percentages are based upon all of the business done by appellees throughout the country in spite of the fact that the record shows the amount of business done by appellees in the four-county area alone. No figures were introduced showing the amount of business done within the four-county area by the other banks located there. This failure so to limit the percentages is no minor imperfection. For example, appellant claims that appellees' "market share" will be 34% of all loans and 36% of all deposits (Appellant's Brief, p. 56). However, 44% of all of appellees' loans are made outside the four-county area (DX 30, R. 3167). If this amount is excluded from appellant's figures, the percentage drops from 34% to 22%. Similarly, if recognition is given to the fact that 32% of appellees' deposits are received from outside the four-county area, the percentage drops from 36% to 28% (DX 30, R. 3165-3166). Even these figures are greatly overstated and therefore valueless because they give no effect to the substantial volume of business done within the four-county area by banks outside it.

There is no justification for appellant's assumption that appellees' share of the business done in the four-county area by the banks located there is the same or even roughly the same as their share of such banks' total business done everywhere. On the contrary, there are many indications in the record that appellees do a far greater percentage of their business outside the four-county area than most of the other banks located within it. For example, approximately 60% in amount of appellees' commercial and industrial loans are loans of $500,000 or more, of which one-half are to borrowers located outside the four counties (DX 30, R. 3167). Of all their commercial and industrial loans 43% are made to outside borrowers *(Ibid.)*. The record indicates that most of the other banks in the four-county area, being smaller banks, do the largest percentage of their business in that area and that most of their loans are in amounts smaller than those of appellees (R. 1231-1232, 1235-1236, 1794-1795, 1909-1910, 1921-1923, 1927, 2082). Thus a comparison of the total business of those banks with the total business of appellees, which do so much business outside the four counties and make the larger loans, is necessarily distorted.

3. *Appellant ignores all of the competition in the four-county area furnished by competitors located elsewhere.*

The inaccuracy of appellant's figures is further magnified by a failure to reflect in the statistics any figures for any banks except those with head offices in

the four-county area. Thus there is nothing to suggest the total volume of banking business done within the area, so that the percentage of that business done by PNB or Girard cannot even be approximated (Fdgs. 56a, 57a, R. 3496-3497).

Substantial business done in an area by competitors located outside it must be included in analyzing a market. *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 502-503, 530 (1948); *Erie Sand & Gravel Co.* v. *Federal Trade Commission*, 291 F.2d 279 (3d Cir. 1961). Cf. *Tampa Electric Co.* v. *Nashville Coal Co.*, 365 U.S. 320 (1961). Appellant's brief would lead this Court to believe that the only competition for banking services in the four-county area is furnished by banks with headquarters in that area. The record is replete, however, with testimony as to the active and successful solicitation of business in the four-county area by banks located elsewhere (see fn., page 10, *supra*).* Appellant gives no recognition to

* In its brief in opposition to appellees' motions to affirm (pp. 8-9), appellant labelled this testimony "speculation" and pointed to a 1955 Federal Reserve study to show that New York banks had "only" $113,000,000 in commercial and industrial loans to borrowers located in Philadelphia. The information for this study was provided by the New York banks on a confidential basis, but when appellees attempted to bring it up to date and to include all categories of bank services, appellant refused to permit its use in evidence on a similarly confidential basis (R. 18-39). The figures in the 1955 study show not only that New York banks had $113,000,000 in such loans in Philadelphia alone, but also that they had $337,000,000 in the Third Federal Reserve District, which is almost as much as appellees together had in 1960 (DX 1, R. 2992, 2997-2998; DX 63, III, R. 3286).

any of these competing banks in its statement that the merger "would reduce to four and three, respectively, the number of competitors for loans up to $2,500,000 and $5,000,000" (Appellant's Brief, p. 56). In view of the record in this case it is preposterous to suggest that banks in New York and other large cities should not be numbered among the competitors for business of that size in Philadelphia.*

The statistical invalidity of appellant's figures led the district court to make the following finding (Fdg. 56a, R. 3496):

> "Plaintiff has introduced no evidence bearing on defendants' proportion of the entire banking business done within the four-county area by all banks deriving business from that area, in any category of business."

C. THE EVIDENCE ESTABLISHES THAT THE MERGER WILL NOT HAVE AN ADVERSE EFFECT ON BANKING COMPETITION OR ON COMPETITORS OR CUSTOMERS OF APPELLEES IN THE PHILADELPHIA AREA.

The preceding section of this brief was directed to the fundamentally misleading character of appellant's statistics and their inadequacy as a support for appellant's conclusions. These statistics were discussed at length, not because appellees deem them significant,

* If in *Columbia Steel* appellant had excluded the business done in the area by outside firms, the "market share" of the acquired corporation would have risen from 10.6% to 16.8% and the acquiring corporation would not have been included in the market at all. *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 513 (1948).

but because appellant, having failed in its efforts to produce a single informed witness who would say that the proposed merger would cause any restraint of trade or commerce,* was forced to rely on statistics alone as a basis for the inferences on which its case is founded. The important evidence in this case, however, and that which will now be discussed, is the testimony of bankers, businessmen, and economists, all familiar with banking and banking needs in the Philadelphia area, who uniformly said that the merger would produce no restraint. The testimony of those familiar with conditions elsewhere throughout the country likewise showed that the existence of a bank as large as the merged bank has not produced such a restraint in any market and would be totally unable to do so in an area such as Philadelphia. On the contrary, the record establishes that the effect of the merger will be to increase and sharpen competition and to benefit the community as a whole.

1. *The elimination of competition between appellees does not of itself constitute an unreasonable restraint of trade.*

The elimination of competition between Girard and PNB, of which appellant tries to make so much, would be significant only if this might in fact have some adverse effect on competing banks or on the

* Although 359 pages of the printed record are occupied by the testimony of appellant's witnesses offered as experts, Professors Smith and Goodman, none of it is cited to support appellant's position.

ability of the public to obtain ample and satisfactory banking accommodation. No qualified witness could be produced by appellant who would testify that either result would be brought about by the merger, and appellant is forced to ask this Court to infer it from the mere fact that the merger will make one bank out of two. But a merger of two competitors has never been prohibited as a *per se* offense under either the Sherman Act, *United States* v. *Columbia Steel Co.*, 334 U.S. 495 (1948), or the amended Clayton Act, *Brown Shoe Co.* v. *United States*, 370 U.S. 294 (1962). In fact, in each of these cases this Court found that the validity of a merger must be measured by its "effect on competition generally in an economically significant market," 370 U.S. at 335. See 334 U.S. at 527-528.

The resources, facilities and personnel of both Girard and PNB will continue to be available to the public in the merged bank, as will those of the other 40 banks of the four-county area, the 75 more in the ten-county area, and the many banks elsewhere.* The end of competition between Girard and PNB will in no way insulate these other banks from competition with the merged bank or free the merged bank from having to compete with them, or give it any power to control or restrain the actions of its competitors or their customers.

* The "hundreds of millions of dollars" of deposits in both appellees belonging to the same customers (Appellant's Brief, p. 41) involves only 400 such customers, most of whom are of the type whose banking choices are not limited to the Philadelphia area (GX 57, R. 2509-2511).

Despite the holdings of this Court in *Columbia Steel* and *Brown Shoe*, appellant continues to press its argument that the elimination of competition between appellees of itself constitutes a restraint of trade, relying on five cases relating to railroad combinations decided between 1904 and 1922. These cases were cited to this Court in *Columbia Steel* but the Court did not even stop to examine them because the factual situation was so dissimilar "that they furnish little guidance." 334 U.S. at 531.

Appellant misses the mark in its attempt (Appellant's Brief, p. 48) to find a similarity between commercial banks and railroads when this Court refused to find such a similarity between steel companies and railroads. An important element in these decisions was the monopoly power possessed by the transcontinental railroads and the anthracite carriers. This was stated clearly in *Northern Securities Co.* v. *United States*, 193 U.S. 197, 327-328, 330-331, 363 (1904) and reiterated in the decisions which followed it. *United States* v. *Union Pacific R.R.*, 226 U.S. 61, 83, 88 (1912); *United States* v. *Reading Co.*, 253 U.S. 26, 47-48 (1920); *United States* v. *Lehigh Valley R.R.*, 254 U.S. 255, 269-270 (1920); *United States* v. *Southern Pacific Co.*, 259 U.S. 214, 230-232 (1922). The last of these cases repudiates appellant's contention. The Court there said that the principle of these earlier cases "was broader than the mere effect upon existing competition between the two systems" (259 U.S. at 230). Furthermore, in the anthracite carrier cases, the

Court pointed to the extensive purchases of independent coal properties, to the combination among the competing carriers to defeat the construction of a new competing railroad, and to the agreement to eliminate the independent coal producers as competitors through restrictive contracts. *United States* v. *Reading Co.*, 253 U.S. 26, 45, 49-50 (1920); *United States* v. *Lehigh Valley R.R.*, 254 U.S. 255, 267-270 (1920). That these cases are totally dissimilar to the instant one is made clear by the abundance of evidence which supports the district court's finding that the merged bank could not possibly control the price and supply of bank credit because "entirely too much competition exists at all levels to permit such an occurrence" (R. 3658). They therefore provide no basis for appellant's argument that the ending of competition between appellees would in itself violate the Sherman Act.

Appellant's argument is inconsistent with the Congressional policy expressed in the Bank Merger Act (Appendix, pp. 84, 89, 95) and would make section 7 of the Clayton Act superfluous since that statute as construed by this Court in *Brown Shoe* would be less restrictive than the newly-suggested prohibitions of the Sherman Act proposed by appellant. This Court said that the standard of illegality set forth in section 7 "reflects a conscious avoidance of exclusively mathematical tests" (370 U.S. at 321, fn. 36). The Court emphasized that the Clayton Act's "concern was with probabilities, not certainties", thereby distinguishing it from other antitrust legislation, including the Sher-

man Act, which existed for "dealing with clear-cut menaces to competition" (370 U.S. at 323). The virtually mechanical prohibition of mergers under the Sherman Act which appellant suggests is not compatible with this interpretation of section 7 by the Court.

2. The merged bank will not be able to dominate or have a competitive advantage over other Philadelphia area banks.

The district court found on the basis of all the evidence that the increase in size of the merged bank "would not be sufficient for market domination" (R. 3658). Despite this finding appellant argues (Appellant's Brief, p. 59), without reference to the record, that the merged bank will be able to dominate its competitors and that the increase in size of the merged bank "will jeopardize the ability of smaller banks to retain or attract business" (Appellant's Brief, p. 63). These theories have no support in the record and are directly contrary to the affirmative testimony of the executives of seven smaller banks in the Philadelphia area, the very banks which appellant asserts will be jeopardized by the merger (R. 1795-1803, 1823-1829, 1874-1877, 1900-1907, 1925-1927, 2086-2087, 2252-2255). As to this the district court said:

> "This Court fails to see how any court, without some factual basis being laid therefor, could accede to [appellant's] request and this is all the more true in this particular case where experienced, substantial bankers throughout this entire area

have appeared in open court, subjected themselves to searching cross-examination, and have unanimously demonstrated that the proposed merger would not cause an undue concentration of banking, would not tend toward a monopoly, and definitely would increase the vigor of competition which the Congress of the United States from the passage of the Sherman Act down to the present date has, by law, attempted to foster." (R. 3666).

Appellant assumes that as a bank grows in size it somehow obtains an advantage over smaller competitors. Obviously larger size enables a bank to attract the business of larger borrowers, which it could not obtain if it were smaller. But large size gives a bank no advantage in seeking to attract the kind of banking business that is within the capacity of its smaller competitors (Fdg. 40a, R. 3493; R. 1237, 1377, 1824, 1866-1867, 1901-1903). This is one of the significant results which flow from the nature of commercial banking. The principal source of every commercial bank's funds is its deposits (Fdg. 27a, R. 3492). Since competition for deposits is largely limited to convenience, quality of service and personal relationships (Fdg. 37a, R. 3493), a large bank has no competitive advantage over a small bank in the attraction of deposits from persons who may be served by both. Indeed there was testimony in the case that the smaller bank has the advantage in these respects (R. 1892-1893). This is also true for loans.

There is no testimony, on which even appellant is willing to rely, that the proposed merger would adversely affect competition in commercial banking. Aside from a number of references to the record to support the statement that banks compete (Appellant's Brief, pp. 39-40) which appellees do not challenge, appellant is able to point to two items alone as lifting the supposed adverse effect of the merger from the realm of "speculation" (Appellant's Brief, pp. 41-42). These two items, which are all appellant can glean from thousands of pages of testimony and hundreds of exhibits, are nothing more than "recommendations" of working committees of appellees on two minor aspects of the future operations of the merged bank. There is no evidence that either of these recommendations were ever approved or adopted or will be followed by the merged bank as appellant asserts.*

The absence of any evidence that the merger will lessen banking competition, coupled with the positive testimony of every competent witness that the merger will increase it, is the heart of this case. The very fact that appellant, in the face of the unanimous opinion of witnesses acquainted with commercial banking in the Philadelphia area, bases virtually its entire case on the relative size of the merged bank, demonstrates appellant's total failure to appreciate the fundamental differences between commercial banking and indus-

* The exhibits which formed the sole basis of appellant's requested findings (Fdgs. 328, 349, R. 3403, 3407; GX 145, GX 143) were never explained or discussed by any witness nor printed in the record.

trial or commercial businesses. In the light of these differences it was incumbent upon appellant to offer at least some evidence to show the applicability of "size," "concentration," "history of mergers in the industry" and similar concepts which have been found pertinent in industrial and commercial fields. Appellant was unable to produce any such evidence.

The growth of commercial banks in the Philadelphia area in the past confirms the testimony that a larger bank has no advantage over its smaller competitors. The competitors of appellees who testified in this case pointed to the rapid growth of each new banking office and of a new bank which had been established within short distances of the offices of larger banks (R. 1822-1823, 1867-1869, 1922-1924, 2250-2252). The percentage growth of deposits of Delaware Valley banks during the past ten years likewise confirms these findings. Although PNB and Girard are the second and third largest banks, 107 of the 115 banks in the area have experienced in recent years a percentage deposit growth greater than that of either PNB or Girard (Fdgs. 109a-122a, R. 3504-3505; DX 18, R. 3060-3070).*

---

* The experience of smaller banks throughout the United States has been comparable. Even the officers of small banks in many parts of the country whom appellant brought to Philadelphia to testify against bank mergers in general admitted that their banks had no difficulty competing with large banks (R. 309-312, 483-484, 651-652, 810).

The percentages of the deposits held by the largest banks in the United States and in particular areas have generally decreased (Fdgs. 140a-142a, R. 3508; R. 1958-1972, 1980-1981; DX 46, R. 3193-3207; DX 48, R. 3244-3257).

All of the foregoing testimony and evidence led the district court to find:

> "Large commercial banks do not have a competitive advantage for business within the range of the resources of smaller banks. In that range, small banks are able to compete as effectively as large banks." (Fdg. 40a, R. 3493).

Moreover the merged bank would have no power to force other banks to raise service charges or interest rates on loans, or to lower rates of interest on deposits. If the merged bank increased its own charges or interest rates on loans above the going rates it would simply lose business to other banks, of which there are more than enough to absorb any business so lost. Nor would the merged bank have any power to affect the free choice of banks by depositors or borrowers, or affect the supply of money in the area or in any way impose its will on other banks or the public (Fdgs. 149a-154a, R. 3509-3510; R. 938-940, 1411-1412, 1731-1732, 1801-1802, 1827-1829, 1874-1877, 1905-1907, 1975-1980, 2029, 2253-2254).

3. *Appellant's contention that banking concentration in Philadelphia will be undue and dangerous is refuted by the evidence.*

Despite the express finding of the district court that "no dangerously potential concentration will result from this merger" (R. 3658), appellant argues that the proposed merger is part of a "dangerous trend toward concentration" in the four-county area

(Appellant's Brief, p. 55). Appellant emphasizes the fact that the number of commercial banks with head offices in the four-county area has diminished in the last 15 years, but ignores the increase in banking offices from 178 to 283 during the same period (GX 13(S), R. 2385). Appellant offered no evidence that the earlier number of banks was the proper number or that the present number is inadequate, and left untouched the question of the effect of this change on the banking business. There is no evidence to suggest that the greater number of banks in 1947 competed with one another more vigorously than the banks do today, or that banking customers in the Philadelphia area were better served then than now. In fact, all the evidence is to the contrary.

Witnesses with knowledge of the Philadelphia area uniformly testified that the reason for past mergers was the pressing need of customers for increased banking services which the existing small banks could not provide (R. 992-994, 1872-1873, 2259-2262, 1833-1838). This need arose from the movement of population and industry to the suburbs, the change in emphasis from wholesale banking serving large corporate customers to retail banking for smaller customers, the greater demand for services which this change placed on the smaller suburban banks, and the liberalization of branching restrictions to accommodate this need (Fdgs. 97a-107a, R. 3502-3503). Indeed the witnesses were emphatic in stating that such mergers, which improved the quality of banking services throughout

the area, have made banking competition far more vigorous today than it was fifteen years ago (Fdg. 107a, R. 3503; R. 994-995, 1237, 1633, 1794, 1824, 1923, 2251). The witnesses further testified that the proposed merger will similarly increase competition and will not affect the ability of other banks to compete effectively (R. 1400, 1412-1413, 1634-1636, 1795, 1825-1829, 1875-1877, 1903, 1925-1927, 1973-1974, 1979, 2252-2254).

Appellant's argument on the reduction in numbers is directly contrary to the statement at page 60 of its brief that "this mere counting of noses leaves out of sight the point of real significance, namely, the size and capacity for competition of the remaining banks." The FDIC reached a similar conclusion in one of the few available studies of banking competition and concentration:

> "No easy or simple answer can be given to the question of the extent to which bank competition has been affected by changes in the number of banks and in the relative position of banks since 1921. If there have been significant changes in the nature of competition among banks, or an appreciable reduction in the intensity of competition among them, the evidence of such changes must come from something other than an examination of changes in the number of banks and in their relative position." Annual Report of the FDIC for 1960 (DX 48, R. 3260).

With respect to the change in the relative positions of banks in the four-county area resulting from

the merger, appellant points to its calculation that the merged bank will hold more than 35% of the assets of the 41 banks in that area (Appellant's Brief, p. 56). This percentage, called "concentration" by appellant, is subject to the same major statistical infirmities as are appellant's "market shares". Moreover, concentration in banking, great or small, without evidence of its effect if any on competition, has no legal significance.* A violation of section 1 of the Sherman Act is not established merely by proof that a merger will bring together a certain percentage of banking resources within a particular area. See *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 527-528 (1948). Even in the more prohibitory standards of section 7 of the Clayton Act, Congress reflected "a conscious avoidance of exclusively mathematical tests." *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 321 fn. 36 (1962).

An examination of concentration in commercial banking in other cities of the United States, computed as appellant has computed it for the four-county area, discloses that in 190 of 224 cities with more than 50,000 population, the largest bank held 35% or more of the bank assets (DX 46, R. 3193-3207). The same is true for 78 of 110 cities with more than 100,000 population (DX 47, R. 3208; *supra*, p. 18), and for 18 of the 34 most populous metropolitan areas in states which,

* Among the banks in the national market with which appellees must compete for the business of their larger customers, the increase in concentration resulting from this merger will be negligible (DX 24, R. 3154).

like Pennsylvania, permit limited area branch banking (DX 55, R. 3266-3267).

There are hundreds of cities and even some states in which the largest bank holds a far greater proportion of bank assets than the merged bank will hold in Philadelphia. Appellant saw fit to call witnesses from small towns as far west as California to express their general displeasure with bank mergers (R. 3634). However, it failed to produce a single witness from any of those hundreds of cities to say that any restraint of trade existed there. Thus, there is no evidence to support appellant's contention that an even smaller concentration in Philadelphia would have an adverse effect on competition. On the other hand, appellees produced expert testimony that there is adequate banking competition in each of those cities which have greater concentration than there will be in Philadelphia after the merger (R. 1954, 1956). Whatever may be the effect of concentration in other industries, ratios alone in commercial banking do not furnish a reliable test of the power of banks to compete with one another. The FDIC reached the same conclusion in the study referred to above (DX 48, R. 3258), saying that ". . . there is no fixed relationship between changes in concentration and changes in competition."

Appellant's suggestion that this merger will force the other large banks located in Philadelphia to merge is without any support in the record. What appellant is really saying is that, while this merger will not

restrain trade, some future merger will do so. However, such a merger will first have to be approved under the Bank Merger Act and appellant will be given notice of such a merger with full opportunity to contest it. As the district court stated (R. 3662):

> "Every future merger in the four-county area will be subject to the close scrutiny of the appropriate state and federal agency. At some point any trend, if discernible in the future, will be checked."

The district court found, on the basis of the evidence offered by appellees, that the 41 banks of the four-county area after the merger will provide a more than adequate number of alternative sources of credit for small and medium size borrowers, particularly in the light of the fact that a prospective borrower turned down by three banks would probably be rejected on credit grounds by any bank (R. 3660; R. 1398, 1716). The other major class of bank customer, the depositor, can obviously go anywhere. The availability to larger customers of the increased lending limit and resources of the merged bank far outweighs a reduction in the number of local banks by one, especially since none of those banks prior to the merger could meet many of their needs. The extravagant statement on page 72 of appellant's brief, that "thousands of existing customers" would be injured by the supposed "restraint of competition" is wholly without justification. It is particularly significant that not one of these "thousands" could be found to challenge the affirma-

tive evidence of appellees' witnesses that existing customers would be benefited by the merger (Fdgs. 190a-195a, 199a-201a, R. 3516-3518).

D. THE MERGED BANK WILL BE BETTER ABLE TO SERVE THE CONVENIENCE AND NEEDS OF THE PHILADELPHIA COMMUNITY AND WILL INCREASE REGIONAL AND NATIONAL COMPETITION.

The proposed merger "is not motivated by an intent or purpose to restrain trade or adversely affect competition" (Fdg. 170a, R. 3512). Its purpose is to prevent the further loss of banking business by appellees to the larger banks from other cities which compete in the Philadelphia area and to provide more adequate banking service to local enterprises (Fdgs. 173a-185a, R. 3513-3515; R. 931-937, 1602-1608).

The district court made detailed findings on the need for the larger bank and the benefits to the community in having such a bank (Fdgs. 173a-207a, R. 3513-3518). In its decision the court stated that it was convinced the merger meets the test of reasonableness under section 1 of the Sherman Act (R. 3663) and concluded (R. 3667):

> "That it will benefit the city and area has been established clearly by a fair preponderance of the evidence, as has been set forth in the Findings of Fact of the defendants previously affirmed."

Appellant's argument that these findings are irrelevant in determining whether there will be a viola-

tion of section 1 is directly contradicted by the line of cases beginning with *Standard Oil Co.* v. *United States,* 221 U.S. 1 (1911), which hold that the Act condemns only unreasonable restraints of trade. See, e.g., *Chicago Board of Trade* v. *United States,* 246 U.S. 231, 238 (1918); *United States* v. *Columbia Steel Co.,* 334 U.S. 495, 527-528 (1948); *United States* v. *duPont & Co.,* 351 U.S. 377, 387 (1956); *Northern Pacific R.R.* v. *United States,* 356 U.S. 1, 5 (1958).* The test of reasonableness is of particular importance in commercial banking because of the Congressional policy that competition in this field must be subordinated to the promotion of a sound and adequate banking system. This policy is set forth most clearly in the legislative history of the Bank Merger Act, portions of which appear in the appendix to this brief, pages 84 et seq., particularly 90, 95, 99, 100, 106. Congress rejected the strict standards of section 7 of the Clayton Act for bank mergers and instead required that the competitive factor be considered along with six banking factors, one of which is "the convenience

* Appellant's reference to the district court's comment that it did not consider the benefits particularly relevant (Appellant's Brief, p. 66, fn. 51) is taken out of context. The court's comment was made in discussing section 7 of the Clayton Act at a time when there was no guide from this Court on the relevance of demonstrable benefits from a merger. Since that time this Court has stated in *Brown Shoe Co.* v. *United States,* 370 U.S. 294, 334, 346 (1962) that even under section 7, consideration should be given to "countervailing competitive, economic or social advantages."

and needs of the community." It is in this context that the rule of reason must be applied.

Appellant is forced to argue that the findings of the district court on the reasonableness of the merger are clearly erroneous. Even a brief review of the evidence demonstrates that these findings are fully supported in the record.

Banks in Philadelphia have not kept pace with the ever-increasing credit requirements of large industrial and commercial enterprises in the Delaware Valley. Exhibit D 25 (R. 3157) graphically contrasts the growth of the general economy in the Delaware Valley with bank growth. Banks have lagged far behind (R. 1350-1351). The evidence establishes that there is no bank in Philadelphia today large enough to provide the services needed by many of the larger Philadelphia area customers (Fdg. 178a, R. 3513; R. 1411, 1877, 2069, 2286).

There are other measurements of the inadequacy of local banking resources. Philadelphia is fourth or fifth in a ranking of the twelve largest metropolitan areas in the United States on the basis of various measures of economic activity, yet Philadelphia ranks ninth on the basis of the size of its largest bank (Fdg. 182a, R. 3514-3515; R. 1344-1345; GX 57, R. 2531-2535). The largest bank in Philadelphia ranks twentieth in the United States and is smaller than one or more banks in San Francisco, Pittsburgh, Boston, Detroit, Cleveland and Dallas, each of which has less popula-

tion than Philadelphia (Fdg. 181a, R. 3514; R. 933-935, 1951, 2288-2290; DX 20, R. 3097; DX 24, R. 3154).

Because Philadelphia does not have a bank large enough to meet the needs of its large business enterprises, a great deal of banking business has shifted to New York and to other cities which have larger banks than has Philadelphia (Fdg. 180a, R. 3514; see fn., page 10, *supra*). It is the purpose of the proposed merger to stop this trend and, if possible, reverse it (R. 1602-1605, 1714).

The size of a bank's resources and lending limit are critical factors in the selection of banks by larger customers. This is so even though in many cases the customer's ordinary credit requirements can be satisfied, since sound business judgment requires flexibility well within a bank's lending limit to provide an adequate margin between ordinary and peak borrowing requirements (Fdgs. 179(a)a, 179(c)a, R. 3513-3514; R. 1949-1951, 2127-2128, 2098-2099, 2063). It is undesirable, from the point of view both of the bank and of the customer to have loans at or near the bank's lending limit (R. 1605-1606). The record shows that as a consequence appellees have lost to larger banks customers with expanding credit requirements even though such requirements were still well below appellees' lending limits (Fdg. 179(c)a, R. 3514; R. 1609-1623).

More importantly, the size of a bank's resources affects the degree of risk which a bank may justifiably

take on loans to particular customers (Fdg. 179(b)a, R. 3514). For example, Girard has lost customers to larger banks outside Philadelphia even though the customers' needs were far below its lending limit, simply because Girard's total resources did not warrant risking in one loan an amount which the other bank with larger resources could readily make (R. 1609-1623). Such customers are far more numerous than the hypothetical "few big concerns" which appellant suggests as the only beneficiaries of the merger (Appellant's Brief, p. 72).

The merged bank will not only have a lending limit and resources more comparable to the banking needs of Philadelphia, it will also have sufficient resources to enable it to develop services which will be competitive with those offered by large banks elsewhere, such as special departments for types of loans and industry groups and more extensive foreign services (R. 1602-1603, 1706-1714). The offering of these facilities will not adversely affect existing relationships between other Philadelphia banks and their customers (R. 2070, 2122, 2146, 2178).

The public will benefit from the fact that the merged bank will be better able to hold and to obtain large customers. An analysis of the accounts of the largest customers of appellees shows that over the entire year 1960 those customers on the average maintained deposits which exceeded their loans by substantial margins. In the case of PNB average deposits were twice as large as average loans; and in the case of

Girard average deposits were more than one and a half times its average loans (DX 26, R. 3163; DX 40, R. 3181). This is the type of customer which appellees seek to hold and to acquire by the merger. The excess of deposits over loans thereby produced will constitute additional credit available in Philadelphia.

The evidence establishes that a merger is the only feasible way to obtain a bank large enough to meet the banking needs of the Philadelphia area (Fdg. 189a, R. 3516), and that, contrary to appellant's argument (Appellant's Brief, p. 68), the requirements of large borrowers cannot be satisfied by participations of several banks in one loan. The district court found that this argument "ignores again the realities of the situation" (R. 3667). Its findings 186a and 187a (R. 3515-3516) explain why such participations are unsatisfactory to both bank and customer and do not provide an effective substitute for the inadequate lending capacity of appellees.

Appellant's "summary" of the testimony of the officers of some of appellees' large customers is seriously misleading in the light of the entire testimony of those witnesses (Appellant's Brief, pp. 68-70). For example, the summary for Atlantic Refining omits the testimony that the company's expected growth will require additional banking relationships, that the company would like to deal with a Philadelphia bank, and that a $15 million lending limit would make this possible (R. 2068). The summary for Rohm & Haas omits the testimony that the lines of credit from five Phila-

delphia banks aggregating $20,000,000 constituted an unsatisfactory arrangement, and that a larger bank in Philadelphia will keep growing businesses from going elsewhere for accommodation (R. 2100-2101, 2104-2105). The summary for Triangle Publications omits the testimony that the company did not want to participate the $10 million loan because it would be more difficult to negotiate, take longer and require greater compensating deposits (R. 2117-2118), and that the company would have considered a Philadelphia bank for this loan if there had been one large enough (R. 2122). The summary for Bankers Securities omits the testimony that the company would prefer to do business with Philadelphia banks but cannot do so now because of the size of these banks (R. 2127-2132). In the summary for Sun Oil, the loan obtained by the subsidiary was $12 million and the testimony was that the subsidiary would have had the merged bank handle it if the merged bank had been in existence at that time (R. 2145). The summary for Pennsylvania Power & Light omits the testimony that the company would increase its proportion of borrowings from Philadelphia banks if there were a larger bank (R. 2177-2178), and that it would move business from its New York bank if the merged bank could develop the specialized services which are now supplied there (R. 2200). Finally, appellant omits entirely the testi-

mony of the president of Automotive Rentals, Inc., the remaining witness of that group, who listed the benefits from the merger which he expected for his company and concluded that the merger is "not only good for me, for us, from a selfish standpoint; it must be good for hundreds of others—small people, not only in the automobile field, but in other small fields of endeavor in the area that I am talking about. It makes sense to me" (R. 2154-2155).

The fundamental theory of appellant would result in banks being kept small irrespective of "the convenience and needs of the community" (Appendix, p. 81). The incapacity of Philadelphia banks to care for the banking needs of the community has produced a great flow of banking business to New York and other cities. If appellant's purpose in this case is accomplished, that disparity will be preserved, the development of a healthy competition between New York and Philadelphia will be prevented and Philadelphia banks will be frozen in their present position of relative incapacity to meet the needs of their customers, without thereby helping any other Philadelphia banks or businesses. This is to frustrate, not to accomplish the Congressional purpose in adopting the Bank Merger Act.

The proposed merger is the first major effort to provide a Philadelphia bank which can become competitive with the larger banks in New York and other

cities. The record shows how many cities smaller than Philadelphia have larger banks which presently draw business from the Philadelphia area. To prevent the creation of a bank which can offer effective competition in this field is to defeat, not to promote the purposes of the antitrust laws. This is particularly indefensible in the absence of any evidence whatever that local competition will be served by preventing the merger. All demands for smaller accommodation can be met adequately by the many banks which will continue to serve the area after the merger. Demands for larger accommodation can be met for the first time in Philadelphia by the merged bank, competitively with large banks elsewhere. The evidence shows and the district court found that the only effect that preventing the merger will have on competition will be to inhibit it.

CONCLUSION

The decision of the district court was based on a determination of the particular facts of this specific case following a thorough analysis of extensive evidence. The court concluded that appellant's claim was founded on nothing more than inferences drawn from mathematical ratios which were not shown to have any significance in the field of banking, and which were affirmatively refuted by the testimony of bankers and businessmen alike, competitors and customers of appellees and other banks in the Philadelphia area.

The decision of the district court was a necessary consequence of appellant's failure to prove any violation of the antitrust laws. The judgment below is correct and should be affirmed.

APPENDIX

I. STATUTES.

Section 18(c) of the Federal Deposit Insurance Act, as amended by the Bank Merger Act of May 13, 1960, 74 Stat. 129, 12 U.S.C. § 1828(c)(Supp. II), provides in pertinent part:

> * * * No insured bank shall merge or consolidate with any other insured bank or, either directly or indirectly, acquire the assets of, or assume liability to pay any deposits made in, any other insured bank without the prior written consent (i) of the Comptroller of the Currency if the acquiring, assuming, or resulting bank is to be a national bank or a District bank, or (ii) of the Board of Governors of the Federal Reserve System if the acquiring, assuming, or resulting bank is to be a State member bank (except a District bank), or (iii) of the Corporation if the acquiring, assuming, or resulting bank is to be a nonmember insured bank (except a District bank). * * * In granting or withholding consent under this subsection, the Comptroller, the Board, or the Corporation, as the case may be, shall consider the financial history and condition of each of the banks involved, the adequacy of its capital structure, its future earnings prospects, the general character of its management, the convenience and needs of the community to be served and whether or not its corporate powers are consistent with the purposes of this chapter. In the case of a merger, consolidation, acquisition of assets, or assumption of liabilities, the appropriate agency shall also take into consideration the effect of the transaction on com-

petition (including any tendency toward monopoly), and shall not approve the transaction unless, after considering all of such factors, it finds the transaction to be in the public interest. In the interests of uniform standards, before acting on a merger, consolidation, acquisition of assets, or assumption of liabilities under this subsection, the agency * * * shall request a report on the competitive factors involved from the Attorney General and the other two banking agencies referred to in this subsection * * *. The Comptroller, the Board, and the Corporation shall each include in its annual report to the Congress a description of each merger, consolidation, acquisition of assets, or assumption of liabilities approved by it during the period covered by the report, along with the following information: * * * a statement by the Comptroller, the Board, or the Corporation, as the case may be, of the basis for its approval. * * *

Section 215(e) of the National Banking Laws, as added, Sept. 8, 1959, 73 Stat. 462, 12 U.S.C. § 215(e) (Supp. II), provides:

The corporate existence of each of the consolidating banks or banking associations participating in such consolidation shall be merged into and continued in the consolidated national banking association and such consolidated national banking association shall be deemed to be the same corporation as each bank or banking association participating in the consolidation. All rights, franchises, and interests of the individual consolidating banks or banking associations in and to every type of property (real, personal, and

mixed) and choses in action shall be transferred to and vested in the consolidated national banking association by virtue of such consolidation without any deed or other transfer. The consolidated national banking association, upon the consolidation and without any order or other action on the part of any court or otherwise, shall hold and enjoy all rights of property, franchises, and interests, including appointments, designations, and nominations, and all other rights and interests as trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, and committee of estates of lunatics, and in every other fiduciary capacity, in the same manner and to the same extent as such rights, franchises, and interests were held or enjoyed by any one of the consolidating banks or banking associations at the time of consolidation, subject to the conditions hereinafter provided.

II. SELECTED EXCERPTS FROM THE LEGISLATIVE HISTORY OF THE BANK MERGER ACT OF 1960 SUPPORTING THE VIEW THAT THE DOMINANT INTENT OF CONGRESS WAS THAT ANY REVIEW OF BANK MERGERS SHOULD TAKE COGNIZANCE OF ALL THE SPECIAL FACTORS WHICH PERTAIN TO BANKING, MONEY AND CREDIT.

Excerpts from "Regulation of Bank Mergers", Report of the Senate Committee on Banking and Currency together with Supplemental Views to accompany S. 1062, S. Rep. No. 196, 86th Cong., 1st Sess. (1959)

The purpose of the bill is to provide for control of all mergers by asset acquisition by banks under the jurisdiction of the Federal banking agencies, under uniform and clear standards calling explicitly for consideration of both banking factors and competitive factors, but without giving sole and controlling effect to any single factor. (p. 1)

* * * * * *

Bank mergers are generally considered to be covered by the restrictions of the Sherman Antitrust Act, but up to this year, no proceeding under the Sherman Antitrust Act had been instituted which involved a bank merger or a consolidation. Since bank mergers are customarily, if not invariably, carried out by asset acquisitions, they are exempt from section 7 of the Clayton Act. (Stock acquisitions by bank holding companies, as distinguished from mergers and consolidations, are subject to both the Bank Holding Company Act of 1956 and sec. 7 of the Clayton Act.) (pp. 1-2)

* * * * * *

In the light of the information set forth above, there is no justification for continuance of the present incomplete and confusing statutory provisions dealing with bank mergers. On the contrary, it is essential to provide immediately for effective and uniform regulation of bank mergers, under standards appropriate to the industry. (p. 13)†

* * * * *

There is no question that competition is desirable in banking, and that competitive factors should be considered in all aspects of the supervision and regulation of banks.

But it is impossible to require unrestricted competition in the field of banking, and it would be impossible to subject banks to the rules applicable to ordinary industrial and commercial concerns, not subject to regulation and not vested with a public interest.

Ever since the days of the first and second Banks of the United States and *McCulloch* v. *Maryland* (4 Wheat. 316, 1819), it has been generally accepted that banking is a field subject to special regulation by virtue of its effect upon and relation to the fiscal and monetary policies of the Federal Government under article I, section 8, of the Constitution of the United States.

This Federal control over banking long antedated the antitrust laws. (p. 16)

* * * * *

† This is the concluding paragraph of the section of the Senate Report captioned "The Need for Regulation of Bank Mergers". Some of the language of that section, which appears on page 8 of that Report, is identical with language on page 5 of the House report. (See Appellant's Brief, pp. 22, 28, 55).

Time and again the Nation has suffered from the results of unregulated and uncontrolled competition in the field of banking, and from insufficiently regulated competition. (p. 17)

* * * * *

The rapid increase in the number of small weak banks, to such a large number that the Comptroller could not effectively supervise them or control any but the worst abuses, was one of the factors which led to the panic of 1907.

The banking collapse in the early 1930's again was in large part the result of insufficient regulation and control of banks, in effect the result of too much competition.

* * * the reform legislation of 1913, while removing many of the defects of the banking system as a system, *did very little to strengthen the individual commercial bank.* * * * The country continued to be served or disserved by thousands of small, weak, independent banks having inadequate capital, incapable executives, and poor outside connections.

* * * the banking collapse did not begin in 1931, but was really under way throughout the period of the 1920's. During that decade * * * thousands of banks failed, but the appalling weakness of the banking structure was not immediately realized, because most of the failures occurred in isolated agricultural communities. ["Money and Banking," Raymond P. Kent, New York, 1947, pp. 303-304.] (p. 17)

* * * * *

It was in the light of this background that section 6 of the Federal Deposit Insurance Act

was written, requiring consideration of the following factors before granting insurance to a bank: the financial history and condition of the bank, the adequacy of its capital structure, its future earnings prospects, the general character of its management, the convenience and needs of the communities to be served by the bank, and whether or not its corporate powers are consistent with the purposes of the act.

The basis for handling banking through banking laws, specially framed to fit the particular needs of the field, instead of relying on unrestricted competition and antitrust laws, is set forth in "Banking Under the Antitrust Laws," by A. A. Berle (49 Columbia Law Review (1949) 589, at p. 592):

> Operations in deposit banking not only affect the commercial field, but also determine in great measure the supply of credit, the volume of money, the value of the dollar, and even, perhaps, the stability of the currency system. Within this area considerations differing from and far more powerful than mere preservation of competition may be operating under direct sanction of law. It is the theory, in ordinary commercial fields, that competition is the desirable check on price levels—the process by which the efficient are rewarded by survival, and the inefficient eliminated by failure. The price of business failures is not regarded as too high for the community to pay in view of advantages to consumers, stimulus toward greater efficiency, and freedom of enterprise. But it is doubtful (to say the least) whether any such assumption

is indulged in with respect to deposit banks; certainly the theory is not there accepted to the full extent of its logic. A bank failure is a community disaster, however, wherever, and whenever it occurs.† While competition may be desirable up to a point in deposit banking, there is a clear bottom limit to its desirability. So long as 90 percent of the monetary needs of the country are supplied through bank credit, deposits, and checks, under a system which contemplates many thousands of banks and also a uniform, smooth, free flow of bank checks, a high degree of cooperation among banks is essential. So long as certain kinds of banking paper are accepted as a basis for currency through the operations of the Federal Reserve rediscount, a high factor of uniformity is needed. The economic and social premises of the Sherman Act in respect of other businesses are not fully accepted by the Congress, the States, or the public as the only considerations applicable to deposit banking.

A BALANCED JUDGMENT REQUIRED

In considering what standards to provide for the reviewing banking agencies, the committee had before it the banking factors set forth in section 6 of the Federal Deposit Insurance Act, the differing antitrust standards of the Sherman Act and the Clayton Act, and also special provisions for regulated public utilities exempted from the anti-

† The foregoing portion of this quotation was also quoted at page 9 of the House Report.

trust laws, such as these covered by the Interstate Commerce Act.

The committee concluded that reference to the banking factors in section 6 of the Federal Deposit Insurance Act, while essential, would not alone suffice, because the section 6 standards do not give sufficient weight to the factor of competition.

The committee concluded, on the other hand, that imposing the strict rule of section 7 of the Clayton Act, as amended in 1950, as interpreted in the *Bethlehem-Youngstown* case, would give absolute and controlling weight to the lessening of competition, regardless of other factors. The committee did not consider that it would be in the public interest to regulate bank mergers under standards which would mean that the demonstrable benefits of a merger are irrelevant and outside the province of the administrator, and which would make no distinction between good mergers and bad mergers.

A number of examples were cited to the committee where the public interest would clearly require that a proposed merger should be approved even though a definite and substantial lessening of competition could be expected:

The representative of the American Bankers Association testified as follows:

> Moreover, there are certain circumstances in which bank mergers may substantially lessen competition and yet be desirable in the interest of the public and sound banking, such as the following practical examples:
>
> . . .

5. Where the acquired bank is an uneconomic unit or is too small to meet the needs of its community by providing loans of sufficient size or by providing needed banking facilities. (pp. 18-20)

* * * * *

Representative Celler testified:

> In addition to the acquisition of a bank which otherwise would be faced with a possibility of failure, there are other circumstances in which, from a banking standpoint, the acquisition of a bank by another bank may be in the public interest . . . The same principle applies where there are not adequate banking facilities. These various situations are illustrative of the circumstances where the consummation of the transaction would not be contrary to the public interest. (Hearings on S. 1062, pp. 98-99)

The committee agreed that in the situation described by the witnesses, and in similar situations, approval of the merger would be in the public interest, even though this would result in a substantial lessening of competition. In cases such as these the benefits would be demonstrable, the merger would be a "good merger," and approval should be granted in spite of the lessening of competition.

Since there was widespread agreement that some mergers were in the public interest and should be approved, even though they might result in a substantial lessening of competition, the committee concluded that the strict rule of the

1950 amendment of section 7 of the Clayton Act was inappropriate to the field of banking.

To adopt this rule for bank mergers might result in the disapproval of bank mergers which all would agree were in the public interest; it might, on the other hand, as the result of the legislative history of the new provisions for banking, bring about a relaxed and modified interpretation of section 7, which would be inappropriate in the case of ordinary unregulated industrial and commercial concerns where unrestricted competition is in the public interest. Either of these results would be undesirable. The committee, therefore, concluded that it was preferable to handle bank mergers under rules specially designed for the banking industry.

The committee concluded that the balanced approach set forth in S. 1062 was the most appropriate for the banking industry. The committee noted the close resemblance to the test provided in section 5 of the Interstate Commerce Act, and further noted that that section provides an exemption from the Sherman Act as well as the Clayton Act, a provision not contained in S. 1062.

S. 1062 provides for full consideration of the public interest in the soundness and good management of the banking system, through recognition of the several banking factors of section 6 of the Federal Deposit Insurance Act, and equally full consideration of the public interest in promoting competition and preventing monopoly. S. 1062 gives no one of these factors controlling weight, but requires that all be considered, that

all be duly weighed, and that a balanced judgment be reached by the banking agency on the basis of all these factors. (pp. 20-21)

* * * * * *

The committee is convinced that there is need for uniform regulation of bank mergers, consolidations, and other asset-acquisition transactions involving banks insured by the Federal Deposit Insurance Corporation. The proposed legislation would achieve this by placing the administration of this law in the hands of the Federal banking supervisory agencies. This bill follows the traditional structure of statutes enacted by the Congress in the regulation of other aspects of the banking industry. (p. 21)

* * * * * *

In passing on applications for mergers, the agency is to take into consideration both the banking factors and the competitive factors which may be involved in the merger. No one of the banking factors alone will be of controlling weight, and no one of the competitive factors alone will be of controlling weight. All must be considered and weighed together by the banking agency involved before it can reach its decision on the application. (p. 22)

* * * * * *

The committee recognizes that in a relatively small number of cases the balancing of the various factors will be difficult—some banking factors may be favorable, some may be unfavorable; some competitive factors may be favorable, others unfavorable.

In such cases, the decision will not be simple. Full consideration will have to be given to the basic purposes of the statute: to promote a sound banking system, in the interest of the Government, borrowers, depositors, and the public; and to promote competition as an indispensable element in a sound banking system. (p. 23)

* * * * * * *

The Attorney General is required to give a report on the competitive factors involved in the proposed merger. Under S. 1062 the competitive factors involved in the merger are only one element of several to be considered in passing on the application. The committee wants to make crystal clear its intention that the various banking factors in any particular case may be held to outweigh the competitive factors, and that the competitive factors, however favorable or unfavorable, are not, in and of themselves, controlling on the decision. And, of course, the banking agencies are not bound in their consideration of the competitive factors by the report of the Attorney General. They will have much information in their own files, and they may obtain information or advice on the competitive factors from other sources. The committee amendment is only intended to make sure that the banking agencies get a report on the competitive factors from the Attorney General in each case. (p. 24)

Excerpts from "Regulation of Bank Mergers", Report of the House Committee on Banking and Currency on S. 1062, H. Rep. No. 1416, 86th Cong., 2nd Sess. (1960)

There are differing views about the effect and the significance of the mergers which have taken

place. But there is general agreement that legislation providing for uniform and effective regulation of mergers is required for the future. (p. 5)

* * * * *

The Federal antitrust laws are also inadequate to the task of regulating bank mergers; while the Attorney General may move against bank mergers to a limited extent under the Sherman Act, the Clayton Act offers little help. (p. 5)

* * * * *

Because section 7 is limited, insofar as banks are concerned, to cases where a merger is accomplished through acquisition of stock, and because bank mergers are accomplished by asset acquisitions rather than stock acquisitions, the act offers "little help," in the words of Hon. Robert A. Bicks, acting head of the Antitrust Division, in controlling bank mergers. (p. 9)

* * * * *

Because banking is a licensed and strictly supervised industry that offers problems acutely different from other types of business, the bill vests the ultimate authority to pass on mergers in the Federal bank supervisory agencies, which have a thorough knowledge of the banks, their personnel, and their types of business. For the same reason, the bill requires consideration of the six banking factors now listed in section 6 of the Federal Deposit Insurance Act. Thus the supervisory agency would consider the financial history

and condition of each of the banks involved, the adequacy of its capital structure, its future earnings prospects, the general character of its management, the convenience and needs of the community to be served, and whether or not its corporate powers are consistent with the purposes of the Federal Deposit Insurance Act.

Reference to these factors, while essential, would not alone suffice, because the section 6 standards do not give sufficient weight to the factor of competition. (pp. 9-10)

* * * * * *

This course [to apply the Clayton Act test generally, with specific exemptions] seems unnecessarily hazardous, however, in view of the wide variety of situations in which a merger may be proposed in all good faith as a means of providing better banking service. Your committee concluded that it would be unwise to attempt to anticipate all possible situations where a merger would benefit the public, and incorporate them in a rigid, specific list of exemptions.

Your committee is convinced the Senate's approach is basically sound. Where demonstrable benefits would flow from a proposed merger, these should be weighed against any adverse effect on competition. Your committee feels, however, that the language of the Senate bill can be improved, to insure that the intent indicated in the legislative history of the bill in the Senate will be properly carried out. Your committee concurs with the Senate committee report's repeatedly expressed intent to allow approval of bank mergers that would be in the public interest. (p. 11)

Excerpts from Senate debate on S. 1062, May 6, 1960, Vol. 106 Congressional Record.

Mr. Fulbright.†

Mr. President, I move that the Senate concur in the amendment of the House.

* * *

As it passed the Senate, S. 1062 expressed the view of the Senate, for the third time, that bank mergers should be regulated by the Federal banking agencies on the basis of banking factors and competitive factors, with no single factor being in itself controlling. S. 1062 was a clear statement, for the third time, of the Senate's view that the provisions of section 7 of the Clayton Act should not apply to bank mergers.

The amendments to S. 1062 made by the House do not change this aspect of the bill. The House has agreed with the Senate that bank mergers should be controlled by the Federal banking agencies on the basis of both banking factors and competitive factors, and that section 7 of the Clayton Act should continue to be inapplicable to bank mergers.

Banking is regulated and subject to many controls not applicable to the ordinary industrial or commercial enterprise: entry into the field of banking is restricted; the establishment of branches is restricted; and the practices and procedures of banking, from the payment of interest on deposits to the kinds of loans made and the reserves which must be maintained, are closely regulated and controlled. Competition in banking is desirable and beneficial; but unrestricted competition in banking, with the bank failures which would result, is no more possible than it is in

† Co-sponsor of S. 1062.

field of public utilities or other industries affected to a greater or lesser extent with the public interest. Banking is too important to depositors, to borrowers, to the Government, and the public generally, to permit unregulated and unrestricted competition in that field.

The antitrust laws have reflected an awareness of the difference between banking and other regulated industries on the one hand, and ordinary unregulated industries and commercial enterprises on the other hand. The 1950 amendment to section 7 of the Clayton Act, which for the first time imposed controls over mergers by means other than stock acquisitions, did not apply to bank mergers which are practically invariably accomplished by means other than stock acquisition. Accordingly for all practical purposes bank mergers have been and still are exempt from section 7 of the Clayton Act.

It is not clear whether the Sherman Antitrust Act of 1890 would now be held to apply to banking in general and to bank mergers in particular, though it seems clear that Senator John Sherman, the former Secretary of the Treasury, for whom the act was named, and the 51st Congress, did not expect or intend banking to be covered by an act applicable to interstate commerce. And even if the Sherman Act is held to apply to banking and to bank mergers, it seems clear that under the rule of reason spelled out in the Standard Oil case, different considerations will be found applicable, in a regulated field like banking, in determining whether activities would "unduly diminish competition," in the words of the Supreme Court in that case. (p. 9711)

The requirement that a favorable finding must be made if the merger is to be approved means only that a beneficial result must appear after the weighing of the seven specific factors set forth in the bill. It does not require the agency to go beyond these seven factors and find an independent and separate public interest in the merger.

The requirement of a favorable finding after weighing these seven factors does not seem out of place in this legislation. A favorable finding would have to be made, for example, in other cases which the banking agencies must consider, such as the chartering of a new bank. It is this distinction between banking and other businesses which justifies different treatment for bank mergers and other mergers. It was this distinction that led the Senate to reject the flat prohibition of the Clayton Act test which applies to other mergers. (p. 9712)

* * * * *

Mr. Bennett.†

Mr. President, in order to make clear to the banking agencies, which will administer this act, the understanding and intention of the Senate in accepting the amendments of the House and passing the amended bill, I ask unanimous consent that this set of questions and answers be printed in the Record following the statement by the Senator from Arkansas, as though I had asked the questions and the Senator from Arkansas had made the answers.

The Presiding Officer. Without objection, it is so ordered.

† Member of Senate Committee on Banking and Currency.

EXHIBIT 1

BANK MERGER BILL

Question. As I understand it, this bill is not directed against nor intended to proscribe or limit size as such, without regard to the banking and competitive tests set forth in the bill, and hence a merger of two large banks should be approved if found to be in the public interest under the tests set down in the bill. Suppose, for example, a situation where such a merger would increase the extent, quality, and efficiency of services rendered to the public, enhance local, regional, or national competition, and meet all the other specific tests in the bill, would not such a merger be considered to be in the public interest under this bill, regardless of size?

Answer. Yes. The bill is not directed against size as such, nor does it impose limits on the size of banks. Size may be, of course, an element to be considered as part of the banking tests and as part of the competitive test under the bill. But it is not controlling. If a merger of two large banks qualifies under the tests set forth in the bill, it should be approved and it will be approved, no matter how big the two banks may be.

Question. The competitive factor in the bill I take to refer, in appropriate cases, not only to local but also to State, regional, and national competitive effect. Is this correct?

Answer. Yes. The Federal banking agency reviewing a proposed merger should consider whatever field of competition the merging banks are engaged in and the new bank will engage in.

Some banks are engaged only in local competition. Other banks are primarily engaged in regional competition. Other banks engage in national or international competition. The field of competition which is actually involved is the field which should be given consideration in reviewing a merger. This is true also of the Justice Department reports on the competitive factors involved in the merger. These, too, should be concerned with the kinds of competition the two banks are now engaged in and the kind of competition the merged banks will be engaged in.

Question. In considering a proposed merger, should the needs of the community and the area and the country as a whole for increased financial services resulting from an expanding economy be considered?

Answer. Yes. The Federal banking agency reviewing a merger under S. 1062 would certainly give due regard to the adequate accommodation of the growing capital requirements of an expanding economy in the community, in the area, and in the country generally. This would not, of course, be the controlling factor any more than any other single factor and, of course, other means of providing increased financial services would be borne in mind.

But there is no question that the Federal banking agency should give due regard to the adequate accommodation of the growing capital requirements of an expanding economy.

Question. In considering a proposed merger, would the responsible Federal banking agency be

able to take into consideration the competition which the merging banks face, and the merged bank would face, from other kinds of financial institutions—savings and loan associations, credit unions, insurance companies, finance companies, and the like?

Answer. Yes, indeed. All competition which the merging banks now face, and which the merged bank would face, must be taken into consideration by the banking agency. This includes both competition from other banks and trust companies and competition from other financial institutions which may provide the same or similar services. It includes competition for the public's funds, in the form of deposits, savings accounts, and the like, and it includes competition in supplying the public's needs for funds in the way of personal loans, consumer credit, mortgages, business loans, and so on.

Question. Mergers already effected have given some banks distinct competitive advantages because of increased lending limits, increased quantity and quality of services, increased availability of highly specialized and technical personnel, and increased overall resources. Other banks have not so grown in size through mergers because of lack of feasible merger opportunities, State laws, management policy, or other reasons. If the effect of the adoption of this bill is to discriminate against these latter banks and thereby to affect adversely their future opportunity to acquire or regain reasonable competitive equality through merger, then we shall be protecting and making permanent a competitive advantage or, a

kind of monopolistic position. It is my understanding that such a discriminatory result is not intended, and that the competitive test in this bill should not be so construed. Is that correct?

Answer. S. 1062 is not intended to have any discriminatory results. It is not intended to discriminate against banks which have been unable to merge in the past because of State laws or any other reasons. The fact that a bank has been unable to merge in the past, and therefore is at a competitive disadvantage with other banks, is something which can be and should be taken into consideration by the banking agency reviewing a merger application. The bill is not intended to prevent banks which have not been able to merge from acquiring or regaining reasonable competitive equality through merger.

Of course, this does not mean that merely because a bank was unable to grow by merger before the enactment of S. 1062, it would thereby have a right to engage in a merger which otherwise would be ruled out by the standards of S. 1062. The standards set forth in S. 1062 are the controlling tests; the competitive disadvantage which a bank is suffering from because it could not previously merge is to be considered as just one of the factors entering into these tests. (p. 9713)

* * * * *

Statement by Senator Johnson of Texas.

This bill establishes uniform and clear standards, including both banking and competitive factors, for the consideration of proposed bank mergers. It eliminates a number of gaps in the

statutory framework, which now permit many bank mergers to occur with no review by any Federal agency. It provides for a thorough review by the appropriate Federal bank supervisory agency, under these comprehensive standards, and with the benefit of any information which may be supplied by the Department of Justice in the report required from them, of the bank mergers by asset acquisitions and other means which are now and will continue to be exempt from the antimerger provisions of section 7 of the Clayton Antitrust Act. (pp. 9714-9715)

Excerpts from House debate on S. 1062, April 4, 1960, Vol. 106 Congressional Record

Mr. Spence.†

This puts control in the banking agencies, which have expert knowledge of the problems involved. At the same time, they will be required to get a report from the Attorney General, whose experience in the antitrust field qualifies him to furnish valuable advice in the administration of the bill. (p. 7257)

* * * * *

Mr. Brown of Georgia.‡

This puts the responsibility for acting on a proposed merger where it belongs—in the agency charged with supervising and examining the bank

† Chairman of House Committee on Banking and Currency.

‡ Chairman of Subcommittee No. 2 of House Committee on Banking and Currency which held the hearings on S. 1062.

which will result from the merger. Out of their years of experience in supervising banks, our Federal banking agencies have developed specialized knowledge of banking and the people who engage in it. They are experts at judging the condition of the banks involved, their prospects, their management, and the needs of the community for banking services. They should have primary responsibility in deciding whether a proposed merger would be in the public interest. (p. 7257)

* * * * *

There is general agreement that stronger, clearer, more uniform controls over bank mergers are needed. This bill will meet this need, in a way that assures a balanced consideration of the total effects of a merger, with appropriate consultation among all interested agencies. In this way, we can expect that bank mergers which will be beneficial will be approved, and those which will not will be stopped. (p. 7258)

* * * * *

Mr. Celler.†

In these circumstances, I think that the bill, provided it is properly administered, constitutes a significant step forward. True, it does not contain all the safeguards that I believe necessary to cope with the rash of bank mergers that have beset the Nation. For example, it would, in my opinion, have been preferable to have made provision for a hearing on the record and the right of court

† Chairman of House Committee on the Judiciary.

review, together with adoption of the competitive test contained in section 7 of the Clayton Act with specific exceptions for cases involving probable failures, management problems, inadequate capital or unsound assets, or overbanked communities. (p. 7258)

* * * * * * *

Mr. Multer.†

Much controversy arose during the course of the hearings on this bill in both Houses of Congress with reference to the extent that the competitive and monopolistic factors should be considered as determinative of these applications. All concerned agreed that all of the banking factors must be considered. There also seemed to be no disagreement that the competitive and monopolistic factors should also be considered. Under the Sherman Antitrust Act and under the Clayton Act the sole tests revolve around the lessening of competition and the creation of monopolies.

The language of S. 1062 as amended by the House Banking and Currency Committee and as it appears in the bill we are now about to pass in the House makes it clear that the competitive and monopolistic factors are to be considered along with the banking factors and that after considering all of the factors involved, if the resulting institution will be in the public interest, then the application should be approved and otherwise disapproved. (p. 7259)

† Member of Subcommittee No. 2 of House Committee on Banking and Currency.

Excerpts from Senate debate on S. 1062 prior to amendment by House, May 7, 11, and 13, 1959, Vol. 105 Congressional Record†

Mr. Robertson.‡

These illustrative examples indicate the difficulties of applying the language of the Clayton Act to bank mergers. They also indicate the basic reasoning behind the committee's bill. This is that the banking business is fundamentally different from ordinary business. It is highly regulated and restricted. It is a quasi-public utility. I do not believe that anyone could safely say that the exceptions provided in the O'Mahoney amendment are the only ones which would occur and in which a merger might be desirable, even though it would substantially lessen competition. (p. 7692)

* * * * * * *

Letter from Mr. Coburn, General Counsel of the Federal Deposit Insurance Corporation.

Our economy is generally expanding, but the rate of growth will vary as between regions and the banks must be able to adjust to and serve the ever-changing needs of trade and commerce within their communities. With growing communities, there is need for enlarged financial services, and hence it is found that the needs for larger

† These relate to the amendment offered by Senator O'Mahoney which would have given controlling effect to the standards of the Clayton Act with specific and narrow exceptions. This amendment was defeated by a vote of 55 to 29. (p. 8139)

‡ Chairman of Senate Committee on Banking and Currency and co-sponsor of S. 1062.

loans, the need for additional categories or types of credit, the need for generally expanded banking services may be one of the underlying factors that encourage merger transactions. Within proper limits, these may be representative of sound justification for mergers which are consistent with the public interest. (p. 7827)

* * * * * * *

Mr. Robertson.

The situation should not continue any longer. Competition in banking should be encouraged and safeguarded. Vigorous competition, between sound and strong banks in a sound banking system, is important and desirable. Such competition will benefit depositors, borrowers, and the Government, and all of them have a vital interest in banking.

But unlimited and unrestricted competition in banking is just not possible. We have had too many panics and banking crises and bank failures, largely as the result of excessive competition in banking, to consider for a moment going back to the days of free banking or unregulated banking.

Instead, in the National Bank Act of 1864, the Federal Reserve Act of 1913, and the Banking Acts of the 1930's including particularly the Federal Deposit Insurance Act, we have taken the position, from which I trust we will never retreat, that banking is affected with a public interest and must be regulated like public utilities and monopolies.

* * *

The significance of the banking system to the monetary and fiscal policies of the Government,

to the businesses and individuals who depend on bank loans for growth and development, and to depositors who must have confidence in the security of their deposits, is too important to permit unrestricted competition.

In the opinion of the committee it is impossible to subject bank mergers to the simple rule of section 7 of the Clayton Act. Under that act, a merger would be barred if it might tend substantially to lessen competition, regardless of the effects on the public interest.

* * *

The committee did not recommend that bank mergers should be exempted from the Sherman Act, but it does recommend continuance of the existing exemption from section 7 of the Clayton Act. (p. 8076)

* * * * *

Mr. Javits.†

The second point, which I think is very important, is this: Shall we give the Attorney General more authority with respect to bank mergers than with respect to other mergers? I feel that there is reason for even less authority, because there are other regulatory agencies, such as the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Federal Reserve Board. There is not the same situation in respect of ordinary corporate merger cases. Here we have a regulated situation. (p. 8129)

* * * * *

† Member of Senate Committee on Banking and Currency.

Mr. Robertson.

Mr. President, if the Congress wishes to put banks on the same basis as steel corporations, automobile corporations, and other corporations, Congress should repeal all present laws on the subject of banks, and could put them lock, stock, and barrel under the Clayton Act, not only in the case of mergers by stock acquisition, but also in the case of mergers by asset acquisition. But if the Senator from Tennessee were to introduce a bill to that effect, it would not receive 10 favorable votes; and he would find that such a bill would be bitterly criticized by his banking friends in his home State. (p. 8132)

OCTOBER TERM, 1962

UNITED STATES OF AMERICA, APPELLANT

v.

THE PHILADELPHIA NATIONAL BANK AND GIRARD TRUST CORN EXCHANGE BANK

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF PENNSYLVANIA

REPLY BRIEF FOR THE UNITED STATES

I

THE PHILADELPHIA FOUR-COUNTY AREA IS THE RELEVANT GEOGRAPHIC MARKET

Defining a geographic market as an aid in assessing the competitive effects of a proposed merger is a practical matter which necessarily requires approximations. Even as a matter of theory there is no perfect definition of the markets in which Philadelphia National Bank ("PNB") and Girard Trust Corn Exchange Bank ("Girard") compete. As a practical matter defining a geographic market requires making the best possible estimate of the area of competition which will be significantly affected by

the proposed merger. However, the fact that any market definition must be less than perfect does not make unnecessary an attempt to define a geographic market and measure competition within it, for determination of a relevant market appears to be a "necessary predicate" to resolution of the question whether a horizontal merger violates the antitrust laws.[1]

Appellees deny that the Philadelphia area is a relevant geographic market but nowhere in their brief do they state what area, in their view, is such a market. The brief (Br. 11, 46) does refer to three widely differing areas and intimates that the most relevant geographic market must be one of these areas.[2] We submit that the substance of appellees' position is that there is no geographic market truly relevant to their proposed merger. If so, they are, in effect, using an elaborate circumlocution to deny that bank mergers are within the reach of the antitrust laws. We submit that there is a relevant geographic market for assessing the effects of a bank merger as well as of any other merger and that the evidence in this case shows overwhelmingly that the Philadelphia four-county

[1] *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 335; *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 527.

[2] The areas referred to are: (1) 5 Pennsylvania counties and 3 New Jersey counties; (2) these counties, an additional New Jersey county, a Delaware county, "and definitely New York City"; and (3) "the northeastern United States."

area is the most relevant market in which PNB and Girard compete.[3]

The market selected for analysis of competitive effects must correspond to "commercial realities" and be "economically significant". *Brown Shoe Co. v. United States*, 370 U.S. 294, 336–337. The Philadelphia area[4] "is, beyond any doubt, an economically significant market—the deposits of the area's banks exceed $4,600,000,000 and their loans are in excess of $2,700,000,000 (GX 161, R. 2829–2830). And it is equally clear that the area constitutes a geographic market corresponding to commercial realities. A bank can receive deposits and service its deposit accounts only at or from its banking office (or offices). Only a bank having its main office in Philadelphia can have branch offices throughout the four-county area. The banking needs of the hundreds of thousands of individuals residing in the Philadelphia area, and of the many large and small enterprises carried on in this

[3] As required by the Bank Merger Act, the Federal Reserve Board and FDIC reported on the effect of the proposed merger on competition. Each of these banking agencies concluded that the Philadelphia area is, with respect to competition, a separate and distinct market and that in this geographic market the merger would have a materially adverse effect on competition (G. Br. 10–11, 37).

[4] For convenience, we use the words "Philadelphia area" to refer to Philadelphia County and the three contiguous Pennsylvania counties in which all of appellees' banking offices are located.

area, can be satisfactorily met only by banks located in this area.

As appellees state (Br. 47), bank deposits "can be" made by mail and bank loans "can be" arranged by telephone, and in very unusual, special circumstances this may be a satisfactory substitute for proximity between bank and customer. But the record and findings in this case firmly establish that banking operations do not even remotely partake of a mail-order type of business. The district court's findings explicitly recognize the great importance to a bank, in its competition for business, of proximity to those needing banking services (G. Br. 35–36). In this connection we additionally refer to the finding that large companies in the Philadelphia area consider it important to be able to do business with Philadelphia banks "because of the close contacts which are required between their top officers and the bankers" (Fdg. 176a, R. 3513). For the vast amount of local business these banks are, for all practical purposes, the sole competitors, insulated as to this business from outside competition. In these circumstances the Philadelphia area indubitably is a geographic market which has clear cut and substantial commercial reality.

The fact that Philadelphia area customers are the source of the great preponderance of appellees' business (G. Br. 34) shows this area to be a relevant geographic market. Appellees have attempted to discount our showing on this point by charging us with having used "selected statistics which inflate the apparent size of appellees' shares of local business"

(Br. 44–45). Appellees furnish no substantiation of their charge. Indeed, the categories of business as to which we showed the percentage derived from Philadelphia area customers[8] clearly are fairly representative of the business engaged in by appellees. Moreover, the statistics used by the government not only failed to "inflate the apparent size of appellees' shares of local business," but actually minimized them. In an effort to avoid controversy over statistics, we used figures in our brief which were based upon appellees' (defendants') exhibits that showed business derived from the Philadelphia area by dollar amount. But markets are composed of people rather than dollars. Measured by numbers of depositors and borrowers, the proportion of appellees' business done in the Philadelphia area is substantially greater than the proportion measured by dollar amount and shown in our brief. The exhibits clearly show that the overwhelming preponderance of all appellees' customers are located in the Philadelphia area. Thus 96 percent of all deposits under $10,000 (which constitute 90 percent of all deposits) and 80 percent of deposits over that amount are made by depositors in the Philadelphia area; and 72 percent of all commercial and industrial loans are made to

---

[8] For ready reference, we here enumerate these categories (G. Br. 34):

Demand deposits of individuals
Demand deposits of partnerships and corporations
Time and savings deposits
IPC deposits (time and demand)
Loans to individuals
Commercial and industrial loans
Personal trusts (by number of accounts)

borrowers in the Philadelphia area. (Details and sources of these data are set forth in tables appended hereto.)

Appellees argue that the Philadelphia area is not an economically significant market which corresponds to commercial realities because there are many banking customers in the area who can bank outside the area. The only * specific support offered for this conclusion is in the field of commercial and industrial loans and business demand deposits, where it is said 68 percent and 64 percent of appellees' business is done with customers having "known alternative [banking] choices" outside the Philadelphia area (Br. 51). We seriously contest the accuracy of the claim that over 60 percent of the customers even in these two areas can easily shift to banks outside the area. We also question the relevance of these figures to defining a geographic market for commercial banking services. But primarily we re-emphasize that the existence of alternative sources for a number of area customers in the fields of commercial and industrial loans and business demand deposits—even if established—would not cast serious doubt upon the significance of the Philadelphia area as the most relevant geographic market for the over-all banking services in which PNB and Girard compete.

* Appellees also object that their share of time and savings accounts and real estate loans, while perhaps large in relation to all commercial banks, is small in relation to all institutions in the four-county area engaged in such business. This is not relevant to a definition of the geographic market although it, of course, has weight in assessing the effects of the merger on competition in one small segment of the agreed-upon product market (commercial banking).

The figures said to reflect the percentage of appellees' business in commercial and industrial loans and business deposits coming from customers having what are said to be "known alternative choices" outside the Philadelphia area plainly do not accurately reflect commercial realities. In the exhibit (DX 43, R. 3185) giving the cited percentages Philadelphia area customers are classified as having banking choices outside that area if the customer (a) had a loan or line of credit exceeding $500,000, or (b) had known banking connections outside the area, or (c) had its headquarters, a major branch, or subsidiary outside the area, or (d) was a subsidiary of a company located outside the area. But none of the stated circumstances gives rise to or supports the presumption that a bank outside the area could serve the banking requirements of a business carried on in the Philadelphia area, as fully and satisfactorily as could a bank located in that area. Any such presumption is substantially negated by the fact that the customers in question, notwithstanding an alternative banking choice, did maintain deposits with, and/or borrow from, one or both of the appellees. For this reason we submit that in these two fields, as in other areas of banking activities, the far more relevant statistics are that 57 percent and 71 percent of appellees' business by dollar volume, and 72 percent and 80–96 percent by numbers of accounts, is done with customers in the four-county area.

Even if these figures for customers with "known alternative choices" outside the Philadelphia area for

two particular types of commercial banking services accurately reflected the number of customers who could as easily deal with non-area banks for these services, they would have little significance in defining the relevant geographic market. Accepting, *arguendo*, the estimates by the senior vice president of the PNB that at least 68 percent in dollar volume of appellees' commercial and industrial loans are made to "customers with known alternative choices outside the four-county area" (appellees' brief, pp. 12, 51), this means that about 32 percent in dollar volume of appellees' commercial and industrial loans—or about $134,000,000—are made to customers whose banking choices are limited to commercial banks located inside the four counties (DX 30, R. 3165–3167). The significance of this volume of commercial and industrial loans to customers limited to banks in the four-county area is revealed by the fact that this amount represents more than the total dollar volume of *all* types of loans to *all* customers by each of 35 of the 39 other commercial banks in the four-county area (DX 15, R. 3052–3058).[7]

Finally, industrial and commercial loans and business deposits are but two subcategories of the business of commercial banks which has been found to be the most relevant product market. As to such other services of commercial banks as receipt of demand

[7] Stated another way, defendants' combined amount of this one category of loans to customers limited to four-county area banks exceeds the total dollar volume of all types of loans to all customers by every bank but four in the area.

deposits and checking account services there is no competition at all from other financial institutions and there is no indication of substantial competition from non-area banks. As to "the conglomeration of all the various services and functions that," the district court found, "sets the commercial bank off from other financial institutions" (R. 3651) and which constitute the undisputed product market in this case, there is no reason to believe that non-area banks furnish significant competition to PNB and Girard.

II

THE PROPOSED MERGER VIOLATES SECTION 1 OF THE SHERMAN ACT

This Court's decisions establish that the Sherman Act is violated by an agreement or combination to merge under the circumstances shown here, namely, (1) the merging companies are engaged in the same trade in the same geographic market, rank second and third in that market, and control more than one-third of the trade therein and (2) a preceding series of mergers has sharply reduced the number of those competing in the market and has greatly expanded the larger companies' share of the market. We understand appellees' principal defense to be that competition among commercial banks involves such peculiar circumstances and conditions that this Court's merger decisions are inapplicable, or only doubtfully applicable, to appellee's merger.

We here comment only on certain of appellees' contentions, referring to our original brief for a full

consideration of the applicability of the Sherman Act to this merger.

(1) Appellees imply (Br. 6, 43) that the government's attack on the proposed merger runs counter to the major objective of bank regulatory legislation—to prevent "the disastrous effects of unrestricted [banking] competition." But disapproval of the merger would not open the door, by one inch, to "unrestricted" bank competition. Competition among the Philadelphia area banks, following such disapproval, would be neither more nor less unrestricted than it is today.

(2) Appellees assert (Br. 7–9, 25, 41–42) that, because of federal regulation and other factors, there is no significant price competition among banks and the respects in which banks can be otherwise competitive is circumscribed. They imply (Br. 40, 43–44) that decisions dealing with mergers of industrial concerns therefore have only limited application to bank mergers. But this Court has consistently held to the view that the broad prohibitions of the Sherman Act embrace restraint of trade by agreement or combination in a trade or industry in which legislation or other factors have the effect of narrowing the channels in which competitive forces operate freely. If in a particular trade legislation restricts some competition, it is the more important that the competition remaining not be restrained by private combination or agreement. See *United States* v. *Southern Pacific Co.*, 259 U.S. 214, 230–231, and other cases

cited in our main brief at page 26. Appellees admit (Br. 9, 42, 65–66) that banks are competitive with respect to service to customers.[8]

Indeed, appellees' emphasis on convenience and quality of service as the principal means by which banks compete does not avoid the significance of the restraint that will be imposed upon competition by this merger. PNB and Girard have competed extensively in these ways. This has been the primary purpose of each bank in establishing its large system of branch offices. The proposed consolidation will eliminate all competition in services and convenience between a bank with 38 banking offices and a bank with 27 banking offices, all of which provide essentially competitive banking services to many thousands of local customers.

There are, moreover, advantages of dominance that result from an ability to offer a customer who has many outlets (e.g., a chain store) an opportunity to deal with a single bank with almost twice as many branches as any other local bank. The combined bank's advantage in this regard over the six largest remaining banks in the Philadelphia area can be seen from the ranking of the banks by number of branch locations, before and after the consolidation:[9]

---

[8] There is, moreover, undisputed evidence that there is significant price competition among commercial banks (see G. Br. 40).

(3) Appellees have 37 percent of the total assets, 36 percent of the total deposits, and 34 percent of the total loans of all Philadelphia area banks (R. 3657), but they contend (Br. 52–54, 67) that these percentages do not accurately show the degree of their hegemony in this area. They contend that these figures should be disregarded because they do not specify the amount of business done in the Philadelphia area by non-area banks and do not deal separately with the area and non-area business of each Philadelphia bank. We submit that appellees' contentions in this regard are little more than claims that there are no practically-obtainable figures to indicate the share of PNB and Girard in the Philadelphia area market.

As to the amount of business done in the Philadelphia area by banks outside the area, it is, of course, impossible to poll every prospective customer in the area to determine with whom he banks and in what amounts. It is almost as impracticable to poll every bank which could be expected to do some business with customers in the four-county area. It is therefore necessary to rely upon figures for the Philadelphia area banks which certainly handle the overwhelming portion of local business. This is not to

suggest that the appellees were in any way barred from introducing evidence to show the extent of the competitive role played by non-area banks in banking in the Philadelphia area. But lacking any such meaningful showing, figures reflecting the banking business done by Philadelphia banks are the best available basis for estimating PNB's and Girard's share of this business. Moreover appellees' present contentions are inconsistent with their objection at trial to the relevance of evidence going to the amount of business in the four-county area done by a Camden bank. (R. 1908–1909.)

Appellees' objection to a failure to segregate the area and non-area business of each Philadelphia bank is equally weak. It is not merely that the administrative burden resulting from requiring every area bank to undertake such a segregation of customers in every aspect of its business would be imposing. The results of such a segregation would, we submit, be less meaningful for most purposes than those obtained by considering the total business of each Philadelphia area bank. Appellees plainly have 37 percent of the total assets of Philadelphia area banks. They contend, however, that as to deposits and loans their share of the Philadelphia area banking business cannot be determined absent data showing the deposits received from non-area depositors and the loans made to non-area borrowers by every Philadelphia bank. But, from the point of view of their combined economic power, appellees' deposit business, like the deposit business of all the other area banks, is the sum of *all*

their deposits, and their loan business, like the loan business of the other banks, is the sum of *all* their loans. The most meaningful measure of appellees' leadership position in the Philadelphia area is their share of the total deposit business and total loan business done by the banks in that area. It is immaterial in this connection that a depositor or borrower has its headquarters in Dallas, St. Louis, Chicago, New York or any other city. The fact that it does maintain an account with a Philadelphia area bank shows that it believes that the banking needs of business or other operations which it carries on in that area are most advantageously served by a bank located within the area. Finally the record contains nothing to refute the normal inference that appellees' share of the total business done by all area banks is substantially the same as its share of the business done in the four-county area by all area banks.

(4) Appellees contend (Br. 17, 60–62, 66) that the merger would not result in undue dominance by the largest bank in the Philadelphia area and that it would actually increase competition therein.

Concerning the first of these points we observe that the Federal Reserve Board believed that a merger creating a bank with deposits over 60 percent greater than those of its nearest rival and well over 250 percent greater than those of its next two nearest rivals would give to the merged bank "a dominant position * * * strongly adverse to the preservation of effective competition" (G. Br. 10). This conclusion is confirmed by appellees' emphasis (Br. 73, 74) on the fact that the size of a bank's resources and lend-

ing limit are "critical factors" in its selection by larger customers, and that the merged bank would have resources enabling it to provide services "competitive with those offered by large banks elsewhere." If these factors would enable the merged bank to get business now done by non-area banks, they would likewise enable it to capture business now done by its area competitors. The merger would further extend the gap between the merged bank and its area competitors.

It is also plain that the record does not reveal any probative evidence that competition would be more than momentarily benefitted by the merger. Several witnesses testified that eliminating all competition between the second and third largest banks in the area would "increase competition" because following the merger some portion of the deposits held by PNB or Girard might be shifted to another bank.[10] This kind of limited temporary shifting of accounts plainly does not show that competition is increased by a merger which would automatically eliminate all competition between banks doing hundreds of millions of dollars of business. However, most of the witnesses who testified that competition would be in-

[10] The president of Girard described this as a "short-term effect" of the merger (R. 1634–1635). He explained that business concerns "want more than one bank" and that therefore a company having accounts with both PNB and Girard is, upon their merger, "a sitting duck for competition" (R. 1635). He said that likewise a bank having both PNB and Girard as correspondent banks might, after their merger, wish to establish a correspondent relationship with an additional area bank (*ibid.*).

creased by the merger obviously meant that other banks in the area would be pressed harder to maintain their position after the merger in the face of the competitive advantages held by the merged bank. As one competitor called by appellees testified, after the merger, competition "will get worse."[11] But competition is only temporarily heightened by widening the competitive gap between competitors. The ultimate result of a marked difference in ability to compete is always either a failure of the weaker competitor or an accommodation by which all competitors survive but competition is, by tacit understanding, eliminated.

(5) Appellees contend (Br. 70–75, 77–79) that any restraints of trade resulting from the merger are reasonable, permissible restraints because the merged bank would be able to obtain business now going to New York or other non-area banks, with consequent benefit to "the Philadelphia Community." We do not here discuss at length the legal validity of this

[11] Testimony of Samuel Weinrott, Chairman of the Board of Industrial Valley Bank and Trust Co. (R. 1825). Mr. Potts, President of PNB, admitted that the merger would give the resulting bank "a competitive advantage" (R. 900, 901, 902). Mr. Brown, President of Girard, testified that the merger would cause competitors to work harder (R. 1648). Professor Harris, a defense expert, testified that one of the effects of the merger would be "that competition may be even made somewhat keener on the part of other banks now seeking to maintain their position on the fac[e] of this merged institution" (R. 1401). Mr. McGinley, President of Beneficial Savings Bank, testified that the merger would increase competition with his bank because the merged bank would have a larger number of offices and a larger advertising budget (R. 2029).

contention (see G. Br. 67).[12] But we reiterate that the most persuasive and weighty testimony bearing on the claimed result of the merger is that setting forth the experience and views of officers of companies which have had actual or potential need for large bank loans or bank credit, and that this testimony strongly indicates that the merged bank would capture little, if any, business from non-area banks (see G. Br. 68–71).

Appellees' claim is that the merged bank's greater resources and higher lending limit would enable it to capture business from New York or other non-area banks. The evidence shows, however, that the amount loaned by New York banks to borrowers in a particular city bears little relation to the size of the resources or to the lending limit of the largest bank in the city. An October 1955 survey by the Federal Reserve Board stated the total loans by New York banks to borrowers in ten cities (DX 1, R. 2997). The record shows the assets (as of June 30, 1956) of the largest bank in each of these cities,[13] and it shows as to six of the

[12] It is well established that a merger is illegal if it has, in *any* significant geographic market, effects of a kind condemned by the antitrust laws (G. Br. 33). Accordingly, a merger is illegal if it has such forbidden effects in a particular geographic market, and it is not saved from illegality by a showing that in other areas in which the merging parties do business the merger's effects might not be violative of the antitrust laws. Since it is beyond all question that the Philadelphia area is where appellees' merger would have its greatest competitive impact, the legality of the merger must be tested by its effect in that area.

[13] DX 21, R. 3101–2, 3109, 3119, 3121–2, 3125, 3137, 3142, 3145.

cities the lending limit of the bank with the highest limit (DX 24, R. 3154–5). The following tabulates, in thousands of dollars, the pertinent data:

City	New York bank loans	Assets of largest bank	Largest bank lending limit
Chicago	$375,000	$2,847,000	$27,500
Houston	375,000	659,708	----------
Los Angeles	218,000	2,184,618	55,000
Detroit	138,000	1,910,114	14,000
Dallas	125,000	778,181	10,500
Philadelphia	113,000	1,064,136	8,000
Baltimore	98,000	287,628	----------
Minneapolis	97,000	438,640	----------
San Francisco	93,000	7,701,486	55,000
St. Louis	89,000	636,472	----------

On appellees' theory, a city having a bank with assets and a lending limit greatly in excess of the assets and of the lending limit of any Philadelphia bank should have very small borrowings from New New York banks compared with the borrowing from such banks in Philadelphia. The complete inconsistency between appellees' theory and the actual facts is shown by comparing Philadelphia with Los Angeles, Detroit, or San Francisco.

(6) Appellees contend (Br. 58) that an "important element" of the railroad merger cases on which we rely was "the monopoly power possessed by the transcontinental railroads and the anthracite carriers," and that this was "stated clearly" in *Northern Securities Co.* v. *United States,* 193 U.S. 197, and "reiterated in the decisions which followed." We sub-

mit that, with one exception,[14] "monopoly power" was not a significant element in these decisions, and that the holding in each of them was that the merger violated the Sherman Act, irrespective of any resulting monopolization of trade, because it suppressed or severely abridged competition between the merging parties. See, *United States* v. *Reading Co.*, 253 U.S. 26, 48; *United States* v. *Yellow Cab Co.*, 332 U.S. 218, 227–28.

Appellees are incorrect in stating (Br. 58) that *United States* v. *Southern Pacific Co.*, 259 U.S. 214, "repudiates" the government's construction of the merger cases. In that case, the Court rejected the railroad's contention that the decision in *United States* v. *Union Pacific Co.*, 226 U.S. 61, rested only on the fact that "a then existing competition" was restrained by the merger, and said that the principle of that decision "was broader than the mere effect upon existing competition between the two systems" 259 U.S. at 230. The "broader" aspect of the prior decision was not, as appellees imply, monopoly power, but restraint upon potential as well as existing competition. *Southern Pacific* was so cited in *United States* v. *Columbia Steel Co.*, 334 U.S. at 528.

We again repeat that our interpretation of the Court's railroad merger decisions is, not that they bar every merger between competing companies, but that they stand for the proposition that where merging companies are major competitive factors in a rele-

[14] The decision in *United States* v. *Lehigh Valley Railroad Co.*, 254 U.S. 255, was rested in part on illegal monopolization.

vant market, the elimination of competition between them, by merger, itself may constitute a violation of the Sherman Act (G. Br. 47–48).

CONCLUSION

For the reasons set forth in our main brief and in this brief, the judgment of the district court should be reversed, and the cause should be remanded to that court to enter judgment enjoining the proposed merger.

Respectfully submitted.
